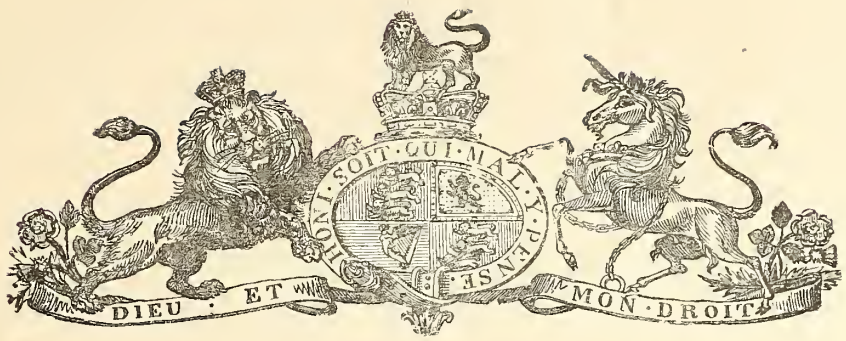
Utility of a Modern Census	v
Weak link of the Census	vi
Work of Enumeration	vii
Worker's Age	xxxviii



CENSUS OF TASMANIA, 1901.

GENERAL REPORT.

Registrar-General's Office, Hobart, 12th September, 1902.

TO THE HONOURABLE THE CHIEF SECRETARY.

SIR,

After an interval of nearly ten years from the taking of the previous Census in Tasmania, the Ninth Census was taken simultaneously with the other States of the Commonwealth of Australia and with New Zealand, on the night of Sunday, the 31st March, 1901.

According to the rule hitherto adopted by the Statisticians of Australasia for fixing the date, viz., the first Sunday following the first day of April, it would have been necessary to take the last Census on the 7th April, 1901. This would have been Easter Sunday. The Conference of Australasian Statisticians, held in Sydney on the 25th January, 1900, to arrange for the collection and compilation of the Census of 1901 upon a uniform principle, was of opinion that it would be unwise to adopt that date, owing to the great disturbance of population which always occurs at Easter time. For this and other important reasons the various Parliaments of the States of Australia and of New Zealand finally fixed upon the Sunday night preceding Easter Sunday, viz., 31st March, 1901. At this time it was intimated that the Census of the United Kingdom would be fixed for the same day, and the desire to be in unison with the Mother Country was the main reason why the Census in Australasia was fixed before, rather than after, the Easter time.

In Tasmania the enumeration of people and dwellings, and the particulars agreed upon by the adoption of the "Model Householder's Schedule," were so far successfully carried out or obtained that the Superintendent of the Census was enabled to publish the general results concerning population, dwellings, and distribution in the *Gazette* of 23rd April, 1901, that is within about three weeks of the Census day. More extended summaries were published from time to time, and early in the month of January, 1902, the following important summaries were published in "Population" (Part V.) of the "Statistics of the Colony" for the year 1900, viz.:—

Population, General Summary, Dwellings.—Number and description, occupation, materials, rooms, details of rental and assessment.
Density of population and houses at successive Census periods.
Increase of population at successive Censuses.
Distribution and density of population within Electoral, Municipal, and Registration Districts.
Cities, Towns, and Villages of more than 100 inhabitants.
Ages of the People.
Conjugal Condition under different Age Groups.
Education at successive Censuses.
Sickness and Infirmity at successive Censuses.
Religious Denominations in Cities and Rural Districts.
Birthplaces of the Urban and Rural Population.
Breadwinners—Numbers and Classes, Grades and Ages, Distribution by Electoral Districts.
Occupations—Distribution showing Numbers under each Class and Order.

The compilation of the whole of the detailed Census Tables under the various categories were satisfactorily completed in manuscript by the 22nd October, 1901 ; that is within seven months of the date fixed for the taking of the Census. In consequence, however, of more than ordinary pressure of work being imposed upon the Government Printer, the printing of the various Parts has been very much delayed. Parts have now been printed and published, and the remaining Parts are so well in hand that I am enabled to furnish you with the usual necessary analyses and observations in the form of a General Report, which, as in former Censuses, serves as an introduction to the completed Tabular Parts.

SECTION I.—PRELIMINARY OBSERVATIONS.

History of Census-taking in Tasmania.

An account of the Ninth Census of Tasmania, taken on the night of the 31st March, 1901, simultaneously with nearly all other portions of the British Empire, would be incomplete without glancing at the history of previous attempts at enumeration of the people.

Although official estimates of the population were prepared from time to time after the first settlement was established in the Island on Monday, the 12th day of September, 1803, it was not until the 27th September, 1841, that the first proper Census of the population was undertaken. Since that time eight Censuses have been taken at intervals of from 3 to 11 years, or a mean interval of nearly 7 years between the various Censuses.

The earlier Censuses were taken more frequently, the average interval being only about 5½ years. The latter Censuses (1881, 1891, and 1901) were taken after longer intervals; the interval between the Sixth and Seventh being 11 years ; between the Seventh and Eighth and Eighth and Ninth, nearly 10 years respectively, thus :—

First Census,	27th Sept.	1841.		
Second „	31st Dec.	1847.	Interval	6.26 years
Third „	1st Mar.	1851.	„	3·14 „
Fourth „	31st Mar.	1857.	„	6·08 „
Fifth „	7th April	1861.	„	4·02 „
Sixth „	7th Feb.	1870.	„	8·84 „
Seventh „	3rd April	1881.	„	11·15 „
Eighth „	5th April	1891.	„	10·01 „
Ninth „	31st Mar.	1901.	„	9·99 „

Thus it would appear the first proper Census of Tasmania was not undertaken until nearly 38 years after the date of its first settlement. This, however, is not to be wondered at when we consider that from the middle ages up to about this time violent prejudices against the enumeration of the people prevailed in nearly all the countries of the world.

History of Early Modern Census-taking in Other Countries.

Undoubtedly it is due to the unreasoning prejudices referred to in a previous chapter that no attempt was made to take a proper Census of Great Britain until as late as the year 1753. The Bill even then introduced was defeated in the House of Lords; and this defeat may be taken as a proof of the strong surviving prejudice against an enumeration of the people. This is clearly manifested in the speech of Mr. Mathew Ridley, Member for Newcastle-upon-Tyne, in which he stated, among other objections, that he knew by letters that "the people looked on the proposal as ominous, and feared lest public misfortune or an epidemical distemper should follow the numbering." Nearly half a century passed away before another attempt was made (March, 10, 1801), which, however, proved successful. But we learn that this first attempt was far from perfect as an enumeration. The Census taken in Ireland for the first time, in 1812, is stated to have been a complete failure ; and the same authority states that the first successful *nominal* Census taken in the United Kingdom was that of Ireland in the year 1821, that is, only 20 years earlier than the first *nominal* Census taken in Tasmania. The earliest modern regular Censuses known, in which the old province of Quebec takes first place of honour, are :—

Province of Quebec	1665.
Sweden	1751.
Norway	1769.
United States of America	1790.
Great Britain	1801.
France	1801.

Happily the prejudices so strongly opposed to Census-taking up to the close of the eighteenth century have now died away almost entirely, and there is now no civilised country which does not avail itself of the information which can alone be obtained by a Census, and which is so essential to the good guidance of all matters relating to the political, social, and material interests of the people.

Initial Preparations for Census of 1901.

Census Conference held in Sydney.

The first important step to arrange for the collection and compilation of the Census of 1901 upon a uniform principle in Australasia, was that taken by the Premiers of the Seven Colonies of Australasia at a meeting held by them in Sydney on the 25th January, 1900. At this meeting the Premiers decided that a Conference of Statisticians, representing the Colonies of Australia and New Zealand, should, at an early day, be called together in Sydney for the purpose of making arrangements for the taking of a Census in each Colony during the year 1901. Accordingly, by the intervention of the Honourable Sir W. J. Lyne, K.C.M.G., Premier and Colonial Treasurer of New South Wales, a Conference of Statisticians representing each Colony was held in Sydney on 26th February, 1900, which continued its sittings to the 3rd of March, 1900.

The members of the Conference held, in all, six sittings.

The representatives of the various colonies taking part in the Conference were.—Mr. T. A. Coghlan, F.S.S, representing New South Wales; Mr. von Dadelzen, New Zealand; Mr. J. J. Fenton, Victoria; Mr. M. A. C. Fraser, Western Australia; Mr. J. Hughes, Queensland; Mr. L. Sholl, South Australia; and Mr. R. M. Johnston, F.S.S., Tasmania. Mr. Coghlan was unanimously chosen as Chairman of the Conference.

Mr. H. A. Smith, an officer of the Statistician's Department, New South Wales, was appointed Secretary, and Mr. W. Ridley, Deputy Registrar-General of New South Wales, by invitation, attended the Conference as advising Member.

In order to facilitate the business of the Conference three sub-committees were appointed. To the first sub-committee was entrusted the task of drawing up a uniform householder's schedule, to the second the revision of the classification of occupations, and to the third was given the duty of drawing up the reasons which led the Conference to recommend the fixing of the particular day for taking the Census.

The scope and limits of the subjects of enquiry was the first point to be determined, and after full discussion the Conference was of opinion that there should be only one addition to the inquiries made at the Census of 1891, viz., where the person enumerated was not born in the Colony he should be asked the length of time he has resided therein.

There were several suggestions for increasing the number of questions to be asked of the people, but the majority of the members of the Conference were of opinion that it would be unwise to extend the inquiries beyond the class of subjects usually prescribed in countries where the Census is taken upon schedules. If, as in some countries, the plan were adopted of appointing enumerators whose business it would be to make personal inquiries from house to house, and fill up their books from the particulars thus obtained, much more elaborate inquiries might be ventured upon.

In order to ensure uniformity, both in making inquiries at the Census and in presenting the results arrived at, the Conference agreed to adopt the form of a "Model Schedule," based upon certain resolutions already agreed upon. The members of the Conference pledged themselves, as far as it may be in their power, to adhere to these resolutions, as they were deeply impressed with the consideration that as six of the Colonies were about to enter upon a federation, the necessity of uniformity in the collection and presentation of all matters affecting finance and electoral representation was of vital importance.

In view of the difficulties which arose at some previous enumerations, owing to the model schedule being attached to the Census Act, the Conference unanimously resolved to recommend that the heads of inquiry only, and not the Census schedule, be embodied in the Census Act in those Colonies where such an Act is necessary.

The Conference decided again to adopt, with slight modification of one or two Sub-Groups, the Classification of Occupations drawn up for the Census Conference of 1891 by the accomplished Statistician of New South Wales (Mr. T. A. Coghlan) and myself.

The resolutions of the Conference drawn up and adopted number 22 in all. These were embodied in their final report, of which the following is an abstract:—

Resolutions of the Conference.

1. That as the Sunday next following the 1st April, 1901, is Easter Sunday, and large numbers of persons are away from home on that day, the Census be taken as for another day.

Subjects of Inquiry.

2. That the subjects respecting which it is desired that inquiry be made at the Census be named in "The Census Act," but that the Schedule containing those inquiries be not attached thereto.

3. That the subjects for inquiry be as follow:—Name, Sex, Birthplace, Age, Religion, Occupation, Conjugal Condition, Education, Sickness and Infirmity, Materials of Houses, Number of Rooms, Length of Residence in the Colony.

4. That the Return of Religion be not compulsory, and that it be optional to insert the word "object" instead, by any one having an objection to stating his religious belief.

5. That the inquiry be made as to whether the person returned is an employer, a worker on his own account, or an employee, or whether he is unemployed.

6. That with reference to Conjugal Condition, it be optional with each Colony to make inquiry as to the year of marriage, and the total number of children (living and dead) born to each couple.

7. That with reference to Education, an inquiry be made as to those able to read and write, able to read only and not write, and unable to read; also, as to those who may be graduates of any University, together with the designations of their respective degrees, and of the Universities at which such degrees were conferred.

8. That with reference to Sickness and Infirmity, an inquiry be made as to the persons laid up or unable to pursue their usual occupation on account of illness or the effects of an accident, or who may be deaf and dumb, or blind.

9. That in the Return of Houses, those inhabited, uninhabited, and in course of erection, be separately distinguished.

10. That the Householder's Schedule should specify that persons travelling or out at work during the night of the Census (and not elsewhere returned), and who return home on the day after the Census, are to be included as if they were present in the house on the night of the Census.

11. That in accordance with the foregoing resolutions, the Householder's Schedule drawn up by this Conference be the basis of the inquiries to be made under "The Census Act."

Compilation.

12. That, as far as possible, the Chinese, Pacific Islanders, and other coloured races, as well as the Aborigines (including half-castes), be tabulated with the general population under every head of inquiry, and separate tables be prepared, so that it may be possible to separate them therefrom, as may be desired.

13. That in working out proportions under any head of inquiry to show the ratio of the numbers in each line to the total, the items in the line for the unspecified be altogether excluded from the computation.

14. That persons whose birthplace is stated to be "Australia," if under 12 years of age, be tabulated as born in the Colony to which the Census relates, and if 12 years of age or over in the column for "Australia undefined."

15. That children respecting whom the return of religion is unspecified be tabulated as of the religion of their parents, if the father and mother are stated to be of the same religion; or if the religion of only one parent is specified, as of the religion of that parent; but that if the parents are of different denominations, no assumption be made as to the religion of the children, who are to be classed as unspecified.

16. That the ages of the people of either sex be tabulated in single ages up to 21, then in quinquennial periods of age up to 85, and after that in single ages; also, that a table be prepared showing the numbers of either sex in the whole population at each year of age.

17. (A) That in tabulating the Occupations of the people, the numbers of either sex under 5 years of age; between 5 and 15; 15 and 20; 20 and 25; 25 and 45; 45 and 65; and over 65 be distinguished.

(B) That the Occupations be tabulated according to the system of classification adopted by this Conference; also, that subsidiary tables be compiled showing:—

(1) The ordinary Occupations of the unemployed of either sex, a person to be considered as unemployed if out of work for more than a week prior to the Census.

(2) Employers of labour and persons in business for themselves, relatives assisting, and wage-earners; no person to be considered as belonging to one of the foregoing divisions who is not actually employed.

(3) The ordinary or former occupations of inmates of either sex of (*a*) hospitals, (*b*) benevolent asylums, (*c*) hospitals for the insane, (*d*) other charitable institutions, (*e*) gaols and penal establishments.

(C) That in the main tabulation, in the case of a person returned as following more than one occupation, he be tabulated, as a rule, under the head of the first mentioned,—the exception being a Government officer following some other calling,—as, for instance, "deputy-registrar and storekeeper," in which case he is to be classed as a storekeeper; also, a person residing where one of his occupations is carried on which would warrant its being considered as the more important, as, for instance, "farmer and publican," living at the public-house, is to be classed as a publican, although that calling may be stated second; also, that a subsidiary table be prepared showing the persons who follow two or more occupations.

18. (A) That in the table of Education the people be grouped in single ages up to 21 years, and after that in quinquennial periods to 85 years of age; those of either sex able to read and write, able to read only, and unable to read, being distinguished.

(B) That no child under 3 years of age be set down as able to read, and no child under 5 years of age as able to write; also, that no person be set down as illiterate who can read or write any foreign language.

(C) That a table also be prepared showing the degree of primary instruction possessed by children between 5 and 15 years of age of each religious denomination; and

(D) That a further table be prepared in age groups showing the education of persons born in the Colony (exclusive of aborigines).

19. (A) That in the tables of Conjugal Condition the people be grouped in single ages from 14 to 21 years of age, those of either sex never married, married, widowed, or divorced, being distinguished; that Chinese be set down as never married unless they have or have had wives in Australasia.

(B) That a table he prepared showing the relative ages of husbands and wives ; also the number of wives whose husbands were absent, and of husbands whose wives were absent, on the Census night.

20. That a table be prepared showing the number of private families with domestic servants, distinguishing families with one servant, two servants, three, four, five, over five and under ten, ten and over ; and also similar particulars in respect of hotels, boarding-houses, &c.

21. That tables be prepared showing the numbers of either sex suffering from each description of sickness or infirmity, grouped in single years of age up to 21, and afterwards in quinquennial periods up to 85 years of age ; that tables be also prepared showing the occupations of those suffering from each description of illness.

22. That in the case of houses, public offices, banks, stores, &c., in which a person or family resides in order to take care of the premises, the number of rooms occupied by such person or family is to be given, and not the whole number in the building. Where a shop is attached to a dwelling the former is not to be considered a room without someone sleeps therein.

Local Preparations for Taking the Census on the Night of Sunday, 31st March, 1901.

The Census Act.

The Tasmanian Census of 1901 was taken under the provisions of a special enactment, "The Census Act, 1901," assented to on 24th August, 1900, which appointed the day upon which the enumeration was to be made, and gave the Superintendent of the Census (Government Statistician of the Colony) the authority necessary to carry out the various objects of the Census. The Act also gave authority for the appointment of the necessary officers.

Among other necessary provisions the Act followed closely upon those of the previous Census, making an exception in regard to religious belief, declaring it optional on the part of any person to state the nature of the faith, if any, professed by him ; answers to all other inquiries were made compulsory.

Means Adopted to Enlist beforehand the Interest and Co-operation of the Press and the People.

Prior to the taking of the Census of 1891 I felt that the success of the Census depended in a large measure upon the intelligent interest and willing co-operation of the people generally. To enlist their interest I prepared a small pamphlet, giving a popular account of "The Object and Utility of a Modern Census." With the approval of the Government, these observations, three months prior to the Census day, were printed in pamphlet form, and, together with a circular inviting the co-operation of the Director of Education, the School Boards, School Teachers, and the local Press, were widely distributed throughout the Colony. By such means, and by the hearty co-operation of the School Teachers and the local Press, the minds of the people generally were awakened and favourably interested. The same course was followed by me on the occasion of the taking the last Census, with like favourable results.

The following extracts, bearing upon the utility, scope, and other important matters relating to census-taking, are taken from the pamphlet referred to, as they serve as an appropriate introduction to the tabular analyses contained in subsequent chapters of this report :—

"The Coming Census of Australasia, fixed for the Night of 31st March, 1901.

"*The Object and Utility of a Modern Census.*

"Although the object and utility of a modern Census are now so well understood by all thoughtful persons, it cannot be overlooked that, among the people generally, there still exists a large amount of misconception which operates seriously in marring the accuracy of results which can alone be obtained by the *intelligent co-operation of every person in the community*.

"The next great national 'stock-taking,' fixed for the night of Sunday, 31st March, 1901, for all the States of the Commonwealth of Australia, and for New Zealand, is looked forward to with the most eager interest by all thoughtful persons. Nor is this to be wondered at. The vital, material, and social well-being of a nation depends in a larger degree than is ordinarily realised upon the accuracy of its knowledge concerning the number, character, and condition of its people. It is the great *measuring-rod* for determining and making timely provision for the supply of all material satisfactions, and for guiding us more securely in determining growing tendencies—whether for good or evil—thereby enabling us to make accurate forecasts, and to make timely and intelligent provision for checking the evil and fostering the good. The objects of a modern Census are altogether different from those of the ancients. The Census of David, recorded in the 24th chapter of the Second Book of Samuel, was instigated purely by the spirit of aggressive warfare or conquest ; and, accordingly, its scope was confined to the number of '*valiant men who drew the sword*.' The only warfare which the modern Census enumeration contemplates is confined to the peaceful conflicts of industry and commerce, and the discovery, subjugation, and control of the unknown or adverse forces of nature.

"Instead of the mere enumeration of *valiant men who drew the sword*, the modern Census seeks rather to ascertain the number of its '*bread-winners*,' and the number of young, aged, and helpless

dependants, in order to enable wiser provisions to be made for rendering the mutual exchange of services of the former more effective, and for making the training or care of the latter more in accord with the higher ideals of modern civilised life.

"But a Census enumeration does more than photograph the facts at the moment of Census-taking. It enables comparisons to be made with former periods, and from these we are enabled to determine many useful laws relating to the direction and rates of progression of all important movements and tendencies.

"Thus *serious famines* in modern times, as compared with ancient times, are mainly averted, or their severity mitigated by statistical knowledge largely based upon the facts primarily ascertained by the Census. The lands devoted to agriculture and pastoral purposes year by year, if not wisely extended in harmony with the ascertained rate of the growth of population and its growing needs, would surely produce famine or misdirected and wasted labour, were it not that those whose interest it is to make provision are guided by statistical knowledge, which could only be rendered possible by periodic Census-taking. The term *per head* of the Statistician, though a meaningless symbol or phrase to the thoughtless or to the ignorant, is, to the statesman, the life insurance actuary, the director of education, the commercial *entrepreneur*, the sanitary adviser, the social economist—analagous to the never-failing 'barometer' or 'sounding-lead'—whereby the course of events is instantly disclosed; thus making it possible to aid or counteract tendencies favourable or unfavourable, so far as such may be within human power.

"From what has been stated it is made sufficiently manifest that the great object of a Census is to gather such information as will be of material service in throwing light upon the more important social and economic questions, thereby making it possible to guide the affairs of the social organisation with greater intelligence and security as regards social and material well-being.

"*Scope of a Census.*

"The value of information gained by means of a Census primarily depends upon the intelligence, honesty, and disposition of the average *householder*. If we ask too many complicated questions we may put too great a strain upon average intelligence or comprehension, and the subsequent pretentious tabulation of the Statistician would be worthless or deceptive. If we arbitrarily seek to invade the privacy of the individual as regards means or income, morals, or even religious belief, we may certainly expect passive or indignant opposition, or—what is worse—we may receive from many, dishonest replies. The practical Statistician who has had experience in Census-taking would avoid failure due to such causes by strictly limiting the number of inquiries to such subjects as will not unnecessarily invade the privacy of the individual, and not place a greater strain than can be safely borne by the intelligence and honesty of the *poorest householder*.

"There is little or no value in the pretentious tabular results of countries where the scope of Census inquiries have been framed with too little regard for such important considerations.

"*The Weak Link of the Census.*

"The strength of a chain is determined by its *weakest link*, and the weakest link in Census-taking is is the *poorly-educated householder*. Many householders are unable to read and write, while a still larger number, from carelessness, ignorance, or lack of interest, fail to comprehend what is required of them in the filling up of the several columns of the *householder's schedule*. The necessary notes of instruction at head of each column, amplified by more comprehensive notes of guidance and model forms of entry on the back of each schedule, appal and confuse many who are unaccustomed to interpretations of this nature.

"How can these difficulties be lessened, if not altogether overcome? Perhaps the most successful plan for securing and intensifying the interest of all persons in regard to the Census would be to secure the interests of *children at schools* by the co-operation of School Boards, and especially by that of the local *schoolmaster* and *schoolmistress*. Let the Government call upon each Chief Superintendent of Census to prepare a *model lecturette* on the objects of the Census, and having done so, let there be issued—as on the occasion of the last Census in the year 1891—a printed copy of the lecturette and a blank householder's schedule, accompanied by a courteously written circular addressed to the *head teachers of every school in the land*, inviting their cordial co-operation by asking them to fix a special day for a *Census Lesson* for the children, accompanied by black-board illustrations as to the manner in which the householder's schedule should be filled up. If this were done, it is certain that it would be productive of the very best results. The lesson of the children would certainly take strong hold of the interest of parents, and there is not a humble home throughout the land where the lesson of the children would fail to penetrate, and where the less favourably educated parents would not fail to become, for the time being, the proud pupils of their own more favourably educated children. The Press—the great educator—may do much to forward this desirable idea in the interests of the public weal.

"Thus it appears the first proper Census of the Island was not undertaken until nearly 38 years after the date of its first settlement. This, however, is not to be wondered at when we consider that from the Middle Ages up to this time violent prejudices against the enumeration of the people prevailed in nearly all the countries of the world."

Preparatory Work of the Central Office of the Census.

The success of a Census enumeration depends, in a large measure, upon the care taken by the Chief Superintendent of the Census in having the whole plan of operations thoroughly worked out in every detail at least nine months prior to the Census-day. This precaution is absolutely necessary when we consider the vast amount of preliminary work which must be completed not less than two

months prior to the actual distribution of Householder's Schedules throughout the whole Colony. Indeed, in populous countries the time required for such preliminary work may engage the close attention of a permanent staff during the whole time of an intercensal period.

The extensive character of this preliminary work, even in a small Colony like Tasmania, may be realised by a brief enumeration of the various forms, circulars, cards, books of compilation and instruction, devised, printed, and distributed in connection with the work of the last Census, in respect of a population of 172,475 persons, scattered over an area of 26,215 square miles.

It is of much importance to those who may have to undertake the work of a future Census to describe more particularly the nature of this work which must be completed long before the Census-day, as in the following summary:—

1. Devising form and printing Householder's Schedules in sufficient number to distribute a copy to every family or household, including a marginal reserve of about 20 per cent. to cover the uncertainties of estimates as regards new or abnormally increasing districts. About 50,000 Schedules were printed and distributed at the last Census among 390 Sub-Enumerators. The printing alone of these Schedules—on both sides—would form an eight-inch ribbon of printed matter, or nearly 22 miles in length, or cover an area of nearly 1·8 acres.
2. Preparing three sets of charts; scale, 1 inch to the mile. A complete set for Central Office, one set divided among the Chief Enumerators of Census Districts, and one set divided and pasted upon the inside cover of each Sub-Enumerator's compilation book. All these charts were carefully hand-coloured, showing the numerous concatenations formed by the intersection of each Electoral, Municipal, Registration, Road Trust, City, and Town boundary. Each mesh or concatenation so formed was distinguished by a particular number, and being the ultimate "area-unit," it formed the so-called locality "Census Sub-division." In addition, each of the independent district boundaries, such as Electoral, Municipal, Registration, &c., were characterised by a distinctive boundary colour. As each of these larger divisions have their areas wholly made up of "area-units" or "Census Sub-divisions," it is a simple matter to compile particulars of the larger divisions from the catalogued "area-units" of which they are severally composed.
3. Devising, classifying, and printing books of:—
   (*a*) Instructions for the special guidance of Enumerators of Districts.
   (*b*) Instructions for the special guidance of Sub-Enumerators.
   (*c*) Instructions for the special guidance of Tabulators.
   (*d*) Instructions as to the mode of entering particulars in Sub-Enumerator's Compilation Book.
4. Printing about 205,000 cards (Tabulating Cards) specially devised for facilitating, and ensuring greater accuracy in the extensive and intricate work of Tabulation.
5. Printing and distributing a large number of necessary circulars to Enumerators and Sub-Enumerators in connection with particular stages of the work.
6. Selecting and appointing Census Staff, organising and carefully drilling them in their various duties, especially as regards the exact limits of their respective district boundaries throughout the country.
7. Arousing the interest of the people, and invoking their aid in making the work of the Census a success, by means of advertisements, pamphlets, and especially by enlisting the kindly good-will and co-operation of the Press and of the Teachers of Colleges and Elementary Schools.

The details given in the foregoing list give some idea of the large amount of work involved in the preliminary preparations for Census-taking, and necessitates, long prior to the Census-day, the careful study and rehearsal of countless minutiæ, the oversight of any one of which might destroy the value of the whole work of the Census.

Work of Enumeration.

The actual work of Enumeration, and the methods and precautions taken to secure completeness and accuracy, are usually mixed up in the body of the larger number of introductory reports on such matters. In this, as in my Report on the last Census, I have in a large measure eliminated the minutiæ which refer to the methods and precautions taken to secure completeness and accuracy, in order to impress more clearly upon the mind the extent and character of the actual work of Enumeration. The minute details of methods to secure accuracy and completeness can better be studied apart in appendices as embodied towards the end of this Report.

The Area to be Covered.—In the first place it must be borne in mind that each Sub-Enumerator of a Sub-District must *personally* visit every dwelling or resting-place for the night of every living person in the Colony at least *twice;* the first visit for the purpose of distributing the householder's schedules; the second, or more, visits devoted to the collection, examination, and if necessary the correction of schedules, and in a large number of cases, to writing out the whole of the answers to queries, in cases where the responsible person has from any cause failed to do so. The last visitation, therefore, involved the collection, examination, and correction of 36,470

schedules gathered from the same number of dwellings or resting-places, scattered over 26,215 square miles, within the space of about three days in most cases. The two visits alone, therefore, cover an area of 52,430 square miles, and to accomplish this in so short a space of time is the problem to be worked out by the Superintendent of the Census. The area which one person could cover in about the time referred to depends upon two factors :—

1. The density of population.
2. The distance which one person could cover per day, in country districts, either on foot or on horseback.

The greater the density of population enables the Collector to cover a larger population in a given time, but the work involved lessens his power to cover a large distance in travelling : and conversely, the smaller the density of population in a district enables the Collector to cover a larger distance in travelling. Hence it is manifest that in mapping out the work of Sub-Enumerators the size of their respective districts should, in a measure, be determined inversely in relation to the greater or lesser density of population.

By estimates based upon such considerations, aided by the local topographical knowledge of the Chief Enumerator of each Electoral District in the Colony, it was determined that the 26,207 square miles of Rural Districts could be covered by 351 Sub-Enumerators : thus on the average giving 74·66 square miles, 80·72 dwellings, and 370 persons to each Sub Enumerator. The Urban Districts (Hobart and Launceston) were likewise determined, and arrangements made provided that the work might be efficiently carried out by 39 Sub-Enumerators: thus giving an average of 19 square miles, 209 dwellings, and 1094 persons to each Sub-Enumerator.

The following summary shows in all respects the apportionment of work of Enumerators for the principal divisions of the Colony forming the larger Census Districts, which, as in former Censuses, for the most part coincide with Electoral District :—

Number and Distribution of Sub-Enumerators.

	Area, Square Miles.	Dwellings, No.	Population, No.	Sub-Enumerators, No.	Apportionment to each Sub-Enumerator.		
					Area, Square Miles.	Dwellings.	Population.
Urban Districts—							
Hobart	1·98	4727	24,654	22	0·09	214·87	1120
Launceston	5·38	3421	18,022	17	0·32	201·25	1060

Oatlands	583·00	678	3182	15	38·86	45·20	212
Kingborough	601·50	994	4830	13	46·27	76·46	371
Devon West	773·00	1402	7483	21	30·81	66·76	356
Deloraine	825·75	1004	4969	14	58·98	71·70	355
Campbell Town	892·50	572	2337	12	74·37	47·67	195
Glamorgan	1168·75	428	1704	13	89·90	33·00	131
Lyell	1420·00	3151	10,451	21	67·62	150·06	498
Wellington	1527·95	1118	5565	13	117·69	86·00	428
Fingal	1536·96	1225	5831	18	85·38	68·05	329
Ringarooma	2057·50	1374	5592	14	146·96	98·14	399
Waratah	2254·25	1079	4867	17	132·60	63·48	286
Franklin	2826·89	875	4326	12	235·57	72·92	360
Cumberland	4221·25	726	3338	13	324·71	55·86	257
Lighthouses	...	Distributed.		1			
Islands	646·34			2			
Total Rural Districts	26,207·64	28,322	129,799	351	74·66	80·72	370
All Districts	26,215·00	36,470	172,475	390	67·21	93·50	442

Thus upon the whole the actual work of the Census connected with Enumeration was carried out successfully by a staff of 390 Sub-Enumerators, being 1 to every 67·21 square miles ; 1 to every 93·5 dwellings ; or 1 to every 442 of the population.

Cost of Enumeration.

The total cost of the Census of 1901 was £3767, including all expenses connected with Enumeration, Tabulation, Furniture and Equipment, and General expenses, as follows :—

	Amount.	Per Sq. Mile.	Per Head.
	£	*s.* *d.*	*s.* *d.*
Enumeration..... 1888		1 5	0 2·62
Tabulation and other expenses 1879		1 5	0 2·62
Total	3767	2 10	0 5·24

The cost of Enumeration is mainly determined by the work involved :—

1. In travelling from dwelling to dwelling throughout each particular district.
2. On the number of the population recorded on the householder's schedule.

In sparsely populated districts the greater proportion of the time and expense of the Enumerator is absorbed in travelling from dwelling to dwelling, the proportion in each district varying with the density of population—increasing relatively with sparsity, and decreasing relatively with density. The relative *cost per head*, on the other hand, progresses inversely to absolute cost, and to relative cost *per square mile*. Hence it follows that as a population increases in density the cost per head becomes less and less ; while the absolute cost and cost per square mile really increases with the density, although at a differently proportionate rate. Thus it happens that the more densely populated Urban Districts of Tasmania (Hobart and Launceston) in 1901 only show a cost of 0·98*d.* *per head* for Enumeration, while the Rural Districts cost 3·17*d.* *per head*. Reckoning by area, however, reverses this order : the cost of Enumeration in Rural Districts being only 1*s.* 3*d.* per square mile, while the cost in Urban Districts is as high as £23 11*s.* 8*d.* per square mile. The cost of Enumeration of a progressive place, district, or country, should show, under similar conditions, an absolute increase at each succeeding census, and relatively, the cost per square mile should progress inversely to cost per head ; the former with an increasing tendency, and the latter with a decreasing one.

The following is a comparative statement of the absolute and relative cost of Enumeration in Tasmania for the last four Censuses :—

Cost of Enumeration.

Census.	Amount.	Per Square Mile.	Per Head.	Density per Square Mile.
	£	£ *s.* *d.*	*d.*	
1870.....	1778	0 1 4	4·30	3·8
1881.....	1896	0 1 5	3·93	4·4
1891.....	1820	0 1 5	2·98	5·6
1901.....	1888	0 1 5	2·62	6·6

The same law as to cost of enumeration and collection is also revealed between countries differing in density of population, and between themselves at different Census periods, as shown by the following illustrations :—

Comparative Cost of Enumeration in Different Countries.

Country.	Census.	Per Square Mile.	Per Head.	Density per Square Mile.
		£ *s.* *d.*	*d.*	
New South Wales.....	1891	0 1 3	4·19	3·7
Victoria	1871	0 2 7	3·76	8·3
"	1881	0 2 10	3·46	9·8
"	1891	0 3 4	3·02	13·0
Scotland	1871	0 13 11	1·48	112·7
"	1881	0 14 6	1·38	125·0
England and Wales....	1871	1 6 7	0·95	386·5
" "	1881	1 9 7	0·80	442·0

The study of the foregoing illustrations of comparative cost of enumeration in different countries and at different periods shows clearly how cost *per head diminishes* with increasing density of population, while a contrary increase in absolute cost and cost per *square mile* invariably happens with increase in the density of the population. A low cost *per head*, therefore, taken by itself, is no test of economy; for it can only be reduced as the *absolute cost* and cost *per unit of area* increases. The total cost of enumeration in Tasmania in 1901 being only 1*s.* 5*d.* per square mile, and 2·62*d.* per head, compares most favourably with former Censuses in Tasmania, and, on the whole, compares most favourably with the cost of enumeration in other countries when both factors are taken into consideration. Indeed the consideration that the absolute cost of enumeration is actually only £68, or 3·63 per cent., more than it was in the Census of 1891, while the population enumerated in 1901 is greater by 17·60 per cent., is the best evidence that can be afforded of the care taken to secure the information required at the lowest cost consistent with efficiency.

The Systematic Work of Tabulation, Summation, and Analysis.

The systematic work of summation, tabulation, and analysis involved in a modern Census is enormous. The whole work is carried out in the central office after the Schedules and Summaries of Enumerators have been gathered, checked, and arranged in classified order. Primarily, the extent of this work is determined by four fundamental considerations:—

1. The number of the Population.
2. The number of distinct categories under which information regarding the same person is again and again abstracted, re-arranged, computed, and set down.
3. The number of distinct sub-divisions under each category for which summaries are prepared.
4. The large number of calculations involved in determining the relative percentage proportion of the figures contained in the numerous summaries under the various categories.

The information required to be compiled by the Census of 1901, according to the plan agreed upon by the Conference of Australasian Statisticians, held in Sydney in the year 1900, embraces a larger number of categories than has ever been attempted before in any part of the British Dominions.

This is best shown by comparing the categories of the Census Schedule of Tasmania for 1901 with those of the Census of 1891 and 1881, as follows.—

Census Categories of 1881, 1891, *and* 1901, *compared.*

Census 1901.	Census 1891.	Census 1881.
Categories related to the Dwelling:		
1. Dwelling	The same	The same
Number	The same	The same
Description (Materials)	The same	The same
No. Rooms	The same	Not ascertained
Rental (annual value)	The same	Not ascertained
Categories related to the Individual:		
2. Name	The same	The same
3. Sex	The same	The same
4. Condition as to Marriage:		
Married	The same	The same
Widowed	The same	The same
Divorced	The same	The same
Never Married	The same	The same
5. Relation to Head of Household	The same	The same
6. Profession or Occupation	The same	The same
7. Grade:		
Employer	The same	Not ascertained
In business on one's own account	The same	Not ascertained
Relative, assisting head of household in his business, but not receiving salary or wages	The same	Not ascertained
Salary or Wage-earner	The same	Not ascertained
Unemployed for more than a week prior to Census	The same	Not ascertained
8. Sickness and Infirmity—nature, cause	The same	The same
9. Birth-place	The same	The same
10. Number of years' residence in State, if born elsewhere	Not ascertained	Not ascertained
11. Religious denomination	The same	The same
12. Education:—		
Degree:		
Cannot Read	The same	The same
Read only	The same	The same
Read and Write	The same	The same
Receiving Instruction:		
At College, Grammar, or High School	The same	The same
At State School	The same	The same
At Denominational School	Not ascertained	Not ascertained
At Home	The same	The same

The number of separate groupings of particulars relating to individuals, under the various categories, necessary to arrive at specific aggregates—afterwards arranged in classified summaries—is much greater than in any previous Census.

The Number of Distinct Categories Determine the Amount of Labour involved in Compilation and Tabulation.

To obtain with accuracy the aggregates under the sub-divisions of each category, from the general information relating to 172,475 persons, contained in 36, 470 schedules, may seem a small matter when contrasted with the tabulation of the results of a large population, such as the United Kingdom or the United States. The labour of compilation, however, is not fairly gauged by the mere size or number of the population. It is true that the preliminary work of abstracting the particulars—provided the categories are the same—is fairly measurable by the number of the population; but this need only absorb about *one-fifth* of the labour of permutation and summation, which latter may depend far less upon the number of the population than upon the number of the groupings for which aggregates have to be obtained and summarised under the various categories.

Take for example some of the more notable of the earliest Censuses of which we have any definite account, as in the following references:—

Census of Moses (*Numbers I.*, 1-46).

Categories restricted to—	Census Enumeration No.
"Number of the names, every male by their polls; from twenty years old and upward, all that are able to go forth to war in Israel." The total of the Twelve Tribes (Levi not included) enumerated	603,550

If we assume that this would include all males twenty years to, say, fifty years, it would represent a population of about 2,791,000 persons.

Census of Joab—Commanded by David.

	Census Enumeration No.
There are two accounts of this very notable Census. That, according to account given in II. Samuel xxiv., 1-17, states that "The valiant men who drew the sword" of Judah and Israel, exclusive of Benjamin and Levi, numbered	1,300,000

The account of the numbering of the men of Israel and Judah "who drew the sword" at this Census, given in I Chronicles xxi., 1-17, sets the number down as 1,570,000. It is estimated, therefore, that a population which would yield such a large number of fighting men must have numbered something between 6,012,000 and 7,270,000 persons. It is noteworthy, therefore, that neither of these ancient Censuses embrace more than about 21 per cent. of the population, and contain only one simple category under each tribal division, viz., "valiant men who drew the sword"; and yet (II. Samuel xxiv., 8) the latter of these Censuses took nine months and twenty days to accomplish. Compare this with the enumeration of 62,000,000 persons of the United States of America in the year 1890, under many categories, accomplished within a month, and in cities of over 10,000 inhabitants within a fortnight. Compare also the Census enumeration of 1901 in Tasmania, with an area nearly four times the size of Ancient Palestine, which was accomplished within ten days of the night fixed for the Census, and the results giving the numbers and proportions of both sexes, for every Electoral District in the State, together with elaborate comparisons with former Censuses, were actually published on 23rd April, 1901, that is within three weeks of the day actually fixed for taking the Census.

Method of Tabulation by the Ticket or Card System.

The successful tabulation of the previous Census by the Ticket or Card System induced me to adopt the same method in the tabulation of the results of the Census of 1901. It may be of great advantage to those who may have to undertake the work of a future Census in Tasmania, therefore, to describe more particularly the mode of working by this system. Although the groupings—numbering nearly a quarter of a million—under the various categories, relating to 172,475 persons

in the Census tabulation, are enormous, they are simply the result of the necessary permutations of fourteen simple categories, as follows :—

	Ticket Abbreviation.
1. Locality or residence of person as indicated by the minutest Census sub-division	Div.
2. Schedule	Sch.
3. Age last birthday	Age.
4. Conjugal Condition	Con.
5. Degree Education	Edn.
6. Where instructed, if receiving education	Inst.
7. Where born	Born$^{7}_{8}$(——)
8. Whether a British or Foreign subject	
9. Residence	Res.
10. Religious Denomination	Relig.
11. Ages of Husband or Wife	Age, H./W.
12. Sickness or Infirmity—if so	Sick.
13. Occupation or Profession of Breadwinner	Occn.$^{13}_{14}$(——)
13. Duty or Class of Dependants	
14. Grade, &c. : Employer on own account, relatives assisting, wage-earner, unemployed seven days prior to Census-day	

With a pre-arranged system of abbreviations all this information was abstracted upon specially printed tickets in respect of each individual upon the 36,470 Householders' or other Schedules.

These tickets, an example of which is here given, were of four different kinds :—

Colour white, plain —for Male Breadwinners.
„ „ barred —for Male Dependants.
„ pink, plain —for Female Breadwinners.
„ „ barred —for Female Dependants.
„ blue, plain and barred—for Aliens.
„ buff —for Sick.

DIV......*SCH.*.....*AGE*.....
Con......*Edn.*.....*Inst.*.....
Born.....*Res.*.....(.....)
Relig..... *Age, H./W.*.....
Sick.....
Occn...... (.....)

A ticket was thus prepared for each one of the 172,475 persons living in Tasmania on the Census night, and the persons employed in writing up tickets from schedules were paid for this preliminary work at the rate of 2*s.* 6*d.* per 100. The tickets were conveniently tied up in 2-set packets, males and females, one 2-set packet for each of the Census sub-divisions, corresponding to the unit of any of the district divisions for which results had to be obtained. Tied with each packet was a small label or tab-ticket, upon which was carefully marked the total number of tickets in packet, in conjunction with the number of Census subdivisions, and also name of clerk last using the packet of tickets. A work-book was also kept containing a complete register of the clerks engaged, with their daily work, to whom the tickets (with their numbers) and the classification division, or table allotted for each particular work, so that in event of any ticket being lost, the responsibility of loss or error could be located. These packets were carefully locked away in cell-presses according to a classified system of Census subdivision localities, so that the person in charge could deliver or replace in its classified position any packet at a moment's notice. Thus all danger of loss or disorder was obviated.

To give the utmost facility to the appointed tabulators special simple tabulating trestle-tables 8 ft. by 3 ft. 6 in. each were provided, each furnished with a lock-drawer underneath, and a vertical frame of ticket-cells fitted on to the back to secure the groups at various stages of the process of tabulating ; two ink-bottles, one for red ink, and one for black ink, were sunk flush with surface at each near corner ; while the surface of the table was divided vertically and horizontally by clearly marked lines, for arranging the tickets in distinct heaps in accordance with the particular classification in process of being carried out.

Much thought was necessary to secure the greatest amount of work by the least amount of labour; but a few simple rules were devised and printed for this object, and also for preserving uniformity of procedure. The great principle, however, in beginning the work of tabulation relating to any stage was to fix upon the *category and its subdivisions which were in every case common to several others*—a constant, so to speak—and having so determined the category for the initial stage, then to break up the packet of the particular Census subdivision, and carefully arrange the cards at the top or side, as the case may demand, into as many subdivisions as, by previous classification, might be determined. Having distributed them in classified order, under this first category, next to count the number of cards composing each subdivision, at the same time recording the total of each group in the corresponding sub-division of this category in tabulating sheet. Finally, adding all such divisions, to prove that the aggregate agreed with the total number of tickets in the Census subdivision packet. This base of constants for other categories being proved, the tabulator would commence the next category by breaking up and dealing in the same way with each of the subdivisions in succession of the first category or constant, recording and checking with ascertained total as before. When second category was completed, he carefully restored each group of second category to its place, as a constant, in the original subdivision of the first category, and proceeded with the third, fourth, or more categories until all were complete in relation to the constant or first category selected. The small size, smooth surface, and stiffness of the tickets favoured rapidity in sorting and counting in orderly heaps on table along the marked divisions, *in the smallest possible space*; the latter consideration a matter of no small importance.

The constants common to several other categories—not reckoning sex or locality constant, which of course is preserved by using distinct tabulating sheets—were:—

1. Age in its fullest subdivision (embracing Conjugal Condition, Education, Instruction, Sickness).
2. Religions in subdivisions of classified Denominals (embracing Education, special groups of Age).
3. Birthplaces in subdivision of Country-born (embracing Education, Special Age groups, special grouping under conjugal condition).
4. Occupations, in subdivisions of Specific Occupation (embracing Special Age groups, Grades, Districts).

By such system the whole of the categories and their varied subdivisions were tabulated and checked in a very satisfactory and orderly manner. All unnecessary handling was obviated, and the greatest possible results were accurately secured with the smallest possible expenditure of labour.

The compilation of the Census subdivision results, under all predetermined categories, with their subdivisions were afterwards aggregated to form results under the various Districts under which it was determined they should be printed, whether in the detailed or summarised forms.

Where the number of cards under ultimate subdivision are very numerous, as in populous countries, the use of automatic ticket-counting machines would be required to facilitate labour; but in counting the ultimate subdivision groups of a small population like Tasmania, the initial expense of such automatic aids would, upon the whole, cancel the advantage saved in hand counting.

My attention was also directed to the ingenious "Holerith" machine employed so largely in America and elsewhere, whereby the counting under all categories is effected simultaneously by electrical "make-and-break" contacts. But, so far as I was able to learn, the advantages are not so great as might be supposed, where the population is inconsiderable, as every distinct particular under each category must previously be indicated by holes punched by hand. The abbreviated signs on cards, I believe, can be done far more speedily and with greater accuracy and satisfaction.

SECTION II.—PROGRESS OF POPULATION.

The results of the Census of 1901, together with the comparisons with the year of the former Census (1891), are presented in the following table:—

Population of the Censuses of 1891 *and* 1901 *compared.*

Population.	1901. No.	1891. No.	Increase in 1901 over 1891.	
			No.	Per cent.
Males	89,624	77,560	12,064	...
Females	82,851	69,107	13,744	...
TOTAL	172,475	146,667	25,808	17·60

Although this comparison shows an increase of 25,508, or an increase of 17·60 per cent. as compared with the Census of 1891, the comparative progress cannot be properly appreciated without reference to corresponding rates of progress in former intercensal periods, as shown in the following table :—

Comparative Progress at various Intercensal Periods since the Year 1841.

Intercensal Periods.	Interval Years.	Increase.		Annual Rate.
		Persons. No.	Per cent. Period.	
1841-51	9·40	19,914	39·66	3·62
1851-61	10·10	19,847	28·30	2·50
1861-70	8·84	9,351	11·76	1·13
1870-81	11·15	16,377	14·78	1·38
1881-91	10·01	30,962	26·73	2·36
1891-1901	9·98	25,808	17·60	1·64
1841-1901	59·48	122,259	243·40	2·09

From the foregoing comparison it will be seen that, as regards absolute increase between any of the six intercensal periods, the greatest progress was made in the decade ending in 1891, the absolute increase being 30,962. The last Census takes up the second position, with an increase of 25,808.

The following places the several intercensal periods in their respective order of importance as regards the actual amount of increase :—

Order.	Period.	Increase, No.
1	1881-91	30,962
2	1891-1901	25,808
3	1841-51	19,914
4	1851-61	19,847
5	1870-81	16,377
6	1861-70	9351

Inasmuch, however, as the several intercensal periods differ somewhat, the true rate of progress is not fairly indicated by the mere reference to the absolute amount of increase between each period. The following table gives the true order of progress, as determined by the decennial and annual rates of increase, thus :—

Order.	Period.	Percentage Rate of Increase.	
		Decennial.	Annual.
1	1841-51	39·66	3·62
2	1851-61	28·30	2·50
3	1881-91	26·73	2·36
4	1891-1901	17·60	1·64
5	1870-81	14·78	1·38
6	1861-70	11·76	1·13

From this analysis it would appear that, although the absolute increase in population the last intercensal period takes up the second position in importance of the six periods compared, it falls into the fourth position when compared by the true relative rate of increase; the first position being taken up by the first, or earlier, period, and the lowest, absolutely and relatively, by the third period in order of time.

Yearly Estimates of Population between Different Censuses.

The ordinary method adopted by Statisticians (between the actual points of time when different Censuses are taken) to form an estimate of the population in each year is to add to the last ascertained results of the Census the natural increase of births over deaths, and to add or deduct, as the case may be, the balance of external migration. The results of the balance of births over deaths may be fairly relied upon as correct in most countries where registration is systematically

carried out; but there is room for a considerable amount of error arising from imperfect registration of migration in young progressive colonies, where the element of migration is extremely variable, and, as a rule, bears a very high percentage to the total population as compared with the same element relative to the much larger populations of older countries. As a general rule also the balance of migration is by a *very small* percentage *against* the older thickly populated countries, while, as a rule, the balance, by a *considerable* percentage, is *in favour* of young progressive colonies. The following illustration brings this important consideration more clearly into view :—

Balance of Migration during Thirty Years 1860-1 *to* 1890-1.

Country.	Balance of Migration.		Percentage.			
			Total		Annual	
	Gain.	Loss.	Gain.	Loss.	Gain.	Loss.
England and Wales	...	969,568	...	4.85	...	0·13
Australasian Colonies	996,046	...	81·54	...	1·49	...

At the close of the intercensal period of 1881-1891, in Tasmania, it was found that the yearly estimates of population, based upon the ascertained balances of natural increase and migration, were in excess of the truth by about 6·82 per cent. From this it was inferred that the Customs estimates were in each year of the interval under estimated, as regards Emigration or Departures, to the extent of about 7 per cent. Although during the intercensal period 1891-1901 a correction, making allowance for unrecorded departures, was made to the extent of 7 per cent, it was found at last Census that, at the close of the decade, the latest estimate was nearly 7 per cent. (6·92) in excess of the truth. During this period there was a much greater migratory movement to and from the new mining centres of the West, and it is inferred that the unrecorded departures by sea to other States were abnormally large.

Immigration.

The influx of a continuous stream of immigrants produces at first, to a small population, a much larger proportion of the annual increase than the ultimate major source of increase, viz., the annual rate of natural increase, or the excess of births over deaths. For example, to a population of say 200,000, an influx, in one year, of 20,000 immigrants would represent an annual increase of as much as 10 per cent., while the normal natural increase would be above the average if it amounted to 2 per cent., representing only an increase of 4000. At a later stage, when the population reached say 10,000,000, an influx of 50,000 immigrants in one year would only represent one-half per cent., while the natural increase of say 2 per cent. would add as much to its population in one year as 200,000. This is the true reason why such abnormal annual rates of increase occur in the earlier decades of the wonderful development of these Australasian colonies, and it explains why the high annual rate of increase of 11·27 per cent, in the decade ending in the year 1861 has gradually fallen until it reached an average of only 1·78 per cent. per annum during the decade ending in the year 1901. The following table further illustrates the fluctuating character of the earlier periods of high rates of increase due to influx of immigrants, in young countries, as contrasted with the more normal progress of the United Kingdom with its great density of population, and in which the influence of migration on its annual rate of increase is so comparatively small that it may be altogether ignored.

Annual Rate of Increase of Population during the Last Century in Old and Young Countries Compared.

Annual Rate of Increase.

Decade ending Year.	United Kingdom.	United States.	Canada.	Australasia.	Tasmania.
1810–11	1·33	3·12	2·88	5·88	...
1820–21	1·59	2·90	2·88	11·94	...
1830–31	1·41	2·95	0·80	8·34	16·41
1840–41	1·08	2·85	6·39	10·28	6·55
1850–51	0·25	3·11	0·87	7·39	3·40
1860–61	0·63	3·10	5·31	11·27	2·52
1870–71	0·83	2·07	1·64	4·39	1·13
1880–81	1·02	2·73	1·75	3·60	1·38
1890–91	0·79	2·80	1·12	3·34	2·36
1900–01	0·75	1·96	1·06	1·78	1·64

Number of Years required to Double Population.

According to mean annual rate of.	United Kingdom.	United States.	Canada.	Australasia.	Tasmania.
Last Century	71·80	26·62	28·64	10·89	16·35
Last Decade.....	92·78	35·71	65·71	39·29	42·61

The preceding table clearly demonstrates not only that the annual rate of increase of population in the younger countries is rapidly approaching the normal rates of the older and more densely populated centres of population, but also, as regards the latter, there is evidence of another cause in operation, especially during the last decade, having the effect of still further lowering the annual rate of increase of the population. From the beginning of the year 1881 the statistics of the United Kingdom and of the Australasian colonies show unmistakably that a great change has taken place as regards the social conditions of the people, and especially effecting the birth-rate in these countries. My friend, Mr. Coghlan, the distinguished Statistician of New South Wales, has made a special study of this important matter. In his statistical account of "The Seven Colonies of Australasia, 1901-1902" (pp. 502-503), he has made the following important observations :—

"It is a matter of common knowledge that for some years past the birth-rate in Australasia has been declining, and so important is the subject—not only as regards the growth of population, but also as affecting general progress—that in 1899 the author made a special investigation into the question of child-birth in Australia, but more particularly with reference to New South Wales. The conclusions arrived at with respect to that State, however, may be held to obtain for all the others, seeing the conditions of living do not differ materially in any of them. During the course of the investigation it was found, first, that for all women the proportion of fecund marriages is decreasing ; second, that among fecund women the birth-rate is much reduced as compared with what it was twenty years ago. It was also found that the decline had been persistent and regular since 1881, and this restriction of births in a young country like Australia, where immigration is discouraged, is a matter which must have far-reaching results, although its economic effects are only beginning to be seen, and should claim the serious consideration of all thoughtful people."

It is true that the lowering of the birth-rate at once, to some extent, operates in reducing the general death-rate also ; but the serious decline in the rate of natural increase, as shown in the following summary, is a strong additional reason for caution in forming any estimate of the growth of population in these colonies during the next century :—

Birth-rate, Death-rate, and Natural Rate of Increase in each Quinquennium in Australasia, 1861-1900.

Quinquennium (average rate).	Birth-rate.	Death-rate.	Natural Increase.
1861–65.....	41·92	16·75	25·17
1866–70.....	39·84	15·62	24·22
1871–75.....	37·34	15·26	22·08
1876–80.....	36·38	15·04	21·34
1881–85.....	35·21	14·79	20·42
1886–90.....	34·43	13·95	20·48
1891–95.....	31·55	12·76	18·79
1896–1900.....	27·31	12·20	15·11

The Causes upon which Growth of Population Depends.

The growth of population depends on two causes—firstly, the excess of births over deaths ; and secondly, on the balance of migration. In this State the former is the principal cause of growth and has invariably shown a very much larger rate in the balance of births over deaths than the corresponding rates of the normal populations of older European countries. The difference in favour of this and other Australasian States, by the larger balance of births over deaths, as comprred with the older and more densely populated countries, is mainly due to the much lower death-rate of the younger countries.

Since the year 1841 the balance of external migration has been subject to much fluctuation. Within the decades ending in 1851, 1861, and 1891 the balance of migration has been in favour of the State ; but within the decades ending 1871, 1881, and 1891 the balance has been against the State.

In the decennium, 1881-1891, the excess of births over deaths, or natural increase, was 25,001, or 21·60 per cent.; while in the decennium 1891-1901 this increase has only been 27,987, or 19·08 per cent. During the last decade the birth-rate in the United Kingdom and in these Australasian colonies has declined in a very remarkable degree, and Tasmania has shown no exception to the general experience. Had the birth-rate of the former decade maintained itself in the decade ending in 1901 it is estimated that the births would have numbered 57,106, instead of the actual 48,374; that means a loss of 8732 to the population from this cause alone. As a set-off to this, however, there has also been a wonderful fall in the death-rate. During the decade 1881-91 the average death-rate was 16·20 per thousand; in the decade ending in 1901 the average death-rate fell to 13·13 per thousand. This difference represents a saving of 5138 lives, and a corresponding gain to the population.

During the decade 1881-1891 the balance of migration was in the favour of the Colony, and added 5961, or 5·13 per cent., to the population. In the period now under review, however, the balance was against the State, and caused a loss of 2179, or 1·48 per cent. Had all the influences operating in the decade 1881-1891 maintained themselves in the last decade, it is estimated that the population on last Census day would have numbered 185,840, instead of 172,475; that is, it would have exceeded the actual by 13,365, or 7·75 per cent.

The fluctuations in the various causes affecting the growth of population in Tasmania since 1841 are shown more fully in the following comparative table :—

Intercensal Periods.

(Per Centage.)

	1841-51.	1851-61.	1861-70.	1870-81.	1881-91.	1891-1901.
Increase by Births	29·01	40·38	33·37	32·60	39·07	32·97
Decrease by Deaths	16·02	22·64	15·44	16·94	17·47	13·89
Gain by Natural Increase	12·99	17·74	17·93	15·66	21·60	19·08
Migration, Gain	26·67	10·56	...	...	5·13	...
" Loss	...	...	6·17	0·88	...	1·48
Total Increase for Period	39·66	28·30	11·76	14·78	26·73	17·60
Annual Rate, Net Increase	3·62	2·50	1·13	1·38	2·36	1·64

Although these comparisons with former periods are very useful in gauging the rate of progress which the State has made at different periods, it is necessary also to measure our progress as far as possible by contrast with other countries about the same time. The following table has been prepared with this object in view. The countries selected for comparison are England and Wales, Scotland, the several States of the Commonwealth of Australia, and New Zealand :—

Population Increase in the Decennium, 1891–1901, in various Countries compared.

Country.	Population, 1901 (Census).	Increase in the Decennium, 1891–1901.		
		Absolute.	Per Cent. for Period.	Annual Rate.
England and Wales	32,526,075	3,523,550	12·17	1·16
Scotland	4,472,000	446,353	11·09	1·06
Commonwealth	3,778,656	595,419	18·70	1·73
New South Wales	1,354,846	222,612	19·66	1·81
Victoria	1,201,341	60,936	5·34	0·52
Queensland	503,266	109,548	27·82	2·48
South Australia	362,604	42,173	13·16	1·25
West Australia	184,124	134,342	269·85	13·98
Tasmania	172,475	25,808	17·60	1·64
New Zealand	815,862	147,211	22·01	2·01
Australasia (Seven Colonies)	4,594,518	742,630	19·28	1·78

The foregoing table gives, at a glance, a clear idea of the relative progress which the Australasian colonies are making as compared with the Mother Country; the progress, relatively, of the former being still much greater on account of (1) the very much larger rate of natural increase (Victoria during the last decade excepted), and (2) to the balance of migration being largely in their favour.

The following is the order of the countries compared as regards the relative progress made by each within the last decade, Tasmania taking the fifth in order, thus :—(1) Western Australia ; (2) Queensland ; (3) New Zealand ; (4) New South Wales ; (5) Tasmania ; (6) South Australia ; (7) England and Wales ; (8) Scotland ; and last, or (9), Victoria.

Abnormal High Rate of Increase in Australasian Colonies during the Earlier Years of Settlement Gradually becoming Normal.

The rapidity with which the population of young English colonies increases during the earlier stages—for example, doubling in the space of 18 years—is marvellous, when contrasted with even the most vigorous of old densely populated centres. During the period 1841-1901 the United Kingdom only increased by 14,723,649, that is, only at an annual rate of 0·73 per cent. This rate, if continuous, would take 94·7 years to double the population.

The relatively more rapid progress of young countries—especially in the earlier stages of settlement—is mainly due :—(1) Relative to population, to the large proportional influx of immigrants from older centres, and (2) to the favourable hygienic conditions of a thinly populated country, tending to prolong the average life, and consequently to produce a much lower death-rate than is found common in the less favourably crowded centres of population of the Old World.

It cannot be expected, however, that the abnormally high rate of increase can be maintained in these Australasian colonies as the population increases beyond the limits of density of the Pastoral stage. This was referred to by the writer in *The Tasmanian Official Record* for the year 1892, in the following terms :—

"It is a common fallacy to assume that the present (1881-1891) relative rate of increase in Australasia will be maintained over a long period of years ; for as population grows larger the immigration element will diminish proportionately, unless we assume, what is very improbable, that immigration will continue to increase at the same rate as the total population.

"The death-rate, too, now so favourable, will gradually increase to the normal rate of European countries as the people approach a similar density of population ; for it is now too well established that a more or less high death-rate is always a concomitant of densely populated centres.

"It is more probable, therefore, that the progress of population in Australasia during the next hundred years will follow the curve exhibited in the United States progress between the years 1790 and 1890, rather than that the rate of the last 30 years shall continue to be maintained for such a long period."

These predictions have been fully verified by the results of the last Census as shown in the following table :—

Diminishing Rate of Annual Increase.

	Annual Rate Period, 1861-91.	Per cent. Period, 1891-1901.
Australasia.		
Natural Increase, or excess of births over deaths	2·36	1·62
Excess of Immigration over Emigration	1·49	0·16
Total	3·85	1·78
Time in years in which the respective rates, if continuous, would double the population	18·3	39·3
United Kingdom.		
Total Net Increase from all causes	0·89	0·73
Years required to double population	78	95

Probable Growth of Population in Tasmania during the Next Century.

Turning our attention now to the future, and assuming that the annual rate of growth of population during the last decade (1·64) will be maintained without any material change throughout the next 100 years, the following table has been prepared showing the estimated population in single years for the first ten, and thereafter in intervals of ten years. The population of the Commonwealth is given for comparison at intervals of ten years. The annual rate assumed by me for the determination of the latter is taken at 1·73 per cent.

Estimated Population during the Next 100 *Years.*

Year.	Tasmania.	Commonwealth.	Tasmania's Per cent. Proportion.
1902	177,077	3,883,822	4·56
1903	179,981		
1904	182,933		
1905	185,933		
1906	188,982		
1907	192,082		
1908	195,232		
1909	198,434		
1910	201,688	4,455,037	4 53
1920	237,316	5,288,607	
1930	279,238	6,278,144	
1940	328,565	7,452,832	
1950	386,605	8,847,310	4·37
1960	454,899	10,502,700	
1970	535,256	12,467,804	
1980	629,809	14,800,610	
1990	741,069	17,570,000	
2000	871,971	20,857,405	
2001	886,273	21,018,208	
2002	900,810	21,585,350	4·17

I have thus given as briefly as the nature of the subject permits the reasoning upon which elsewhere I have chosen to base my estimate of the growth of population in this State upon the latest rates of annual increase rather than upon averages which include the differing conditions of the earlier periods, involving, as they do, the unreliable disturbing conditions and non-recurring abnormal proportional increases due to influx of immigrants. It is even doubtful if the lower average rates of increase of the last decade can be maintained over so long a period as the next 100 years; but when we consider that the nearness of the United States of America, with her still vast areas of undeveloped lands, open to the surplus population of Europe, the rapidly growing density of population in the former, and the resulting congestion of their labour market, may favour a diversion of a very much larger proportion of European surplus labour to Australia within the next thirty or forty years.

We have, therefore, good reason for the belief that the higher stage of development in the United States in the coming century may specially favour the progress of the Australasian group.

An estimate prepared by me, based upon the experience of twenty-one great countries, with a population of over 400 millions, demonstrates that the present civilisation requires the cultivation of 2·25 acres per head for food and raw products. The present area of the United States is reckoned at about 2291 million acres. Allowing a need of the estimated requirement of cultivated land—viz., 2·25 acres per head—for supplying the whole round of wants of each person, and that three-fourths of her total area are capable of cultivation, then, if her population increases at her present rate of 1·96 per cent. per year, it would be so vast in 119 years (763 million persons) that the produce of every available acre would be wholly required for *home consumption*. The checks to population, however, may be expected to increase, and this limit may be placed further back; but it is clear that the need to withdraw, more and more, her present enormous export of raw products from external markets will greatly operate in enhancing the value of the virgin soils of the more distant Australasia, and so give an additional spur to her development in the coming years.

Progress of Population in the intervals of the periodic Censuses between the Years 1841 *and* 1901.

	1841. 1st.	1847. 2nd.	1851. 3rd.	1857. 4th.	1861. 5th.	1870. 6th.	1881. 7th.	1891. 8th	1901. 9th.	1841 to 1901.

NOTE.—The boundaries and number of Electoral Districts were much altered between the two last Censuses, and hence it is difficult to make strict comparisons between many of the Districts. Taken in groups as bracketed, and by the larger divisions, the comparisons may be regarded as approximately correct.

The order of the various Electoral Districts, showing the greatest relative increase and the least relative decrease since 1891, is shown as follows, beginning with the highest relative increase :—

	Increase, per cent.
1. Lyell, Zeehan and Cumberland	191·31
2. Devonport, West Devon, East Devon, and Wellington	28·70
3. George Town, Ringarooma, and Selby	22·80
4. Kingborough and Queenborough	18·05
5. Franklin	16·79
6. Fingal	16·54
7. Glenorchy	13·89
8. City of Launceston	4·73
9. Evandale	2·79
10. New Norfolk	1·20
11. Deloraine	1·14
	Decrease, per cent.
12. City of Hobart	1·0
13. Campbell Town	1·32
14. Oatlands	4·44
15. Longford, Cressy, and Westbury	5·46
16. Brighton, Richmond, Sorell, and Glamorgan	6·66

From the above summary it will be seen that a third of the districts show a slight decrease, as compared with the previous Census, ranging from 1·0 per cent in the City of Hobart to 6·66 per cent. in the districts of Brighton, Richmond, Sorell, and Glamorgan.

Two-thirds of the districts, however, show increases ranging from 1·14 per cent. in the district of Deloraine to as high as 191·31 per cent. in the new rich mining centres of the West (viz., Lyell and Zeehan, including Cumberland).

The general movement of population, however, is better appreciated when studied in relation to the larger geographical divisions, as in the following summary :—

Relative Progress in the Larger Geographical Divisions.

	Increase per cent. since 1891.
1. Western and Midland	99·35
2. North-Western	23·78
3. North-Eastern	8·42
4. South-Eastern and South-Western	3·83
All	17·60

From this it would appear that numbers One and Two are above the average increase for the whole State, while the Third and Fourth divisions are much below it.

The following summary shows the absolute increases for the larger divisions. The order of relative progress, however, remains undisturbed, thus :—

Absolute Progress in the Larger Geographical Divisions.

	Actual Increase since 1891.
1. Western and Midland	12,998
2. North-Western	6544
3. North-Eastern	4038
4. South-Eastern and South-Western	2228
All	25,808

Relative Order of Importance in Relation to the Total Population of the Larger Geographical Divisions.

The proportion of population in each one of the larger geographical divisions, in relation to the whole State has been greatly modified since the previous Census by the general trend of migration from the older settled districts to the new centres of the rich silver and copper mining fields of Western Tasmania. Although this movement of population from East to West has been

very large and general, it did not go so far as to disturb the order of relative importance of the larger geographical divisions as ascertained at the previous Census of 1891 ; thus : —

Population of the Larger Geographical Divisions in 1901, *as compared with the Year* 1891.

	Census 1891.		Census 1901.	
	No.	Per cent.	No.	Per cent.
1. South-Eastern and South-Western Division	58,131	39·64	60,359	35·00
2. North-Eastern	47,939	32·68	51,977	30·13
3. North-Western	27,515	18·76	34,059	19·75
4. Western and Midland	13,082	8·92	26,086	15·12
Total Population	146,667	100·00	172,475	100.00

Aggregation of Population.

The absolute extent of aggregation, or centralisation, of population of any country, and particularly as regards metropolitan centres, is in a large measure determined by the number of the total population of the country as a whole. The proportion which the capital or metropolitan centre of any country bears either to what is usually termed "urban" centres as a whole, or to the total urban and rural population, is quite an accidental matter, and varies extremely in different countries, in accordance with nature of the prevailing industries and with geographical and physical conditions. Thus, although the population of London in 1901 (4,536,063) only represents 13 95 per cent. of the total population of England and Wales, the total urban population of England and Wales (25,054,268) represents as much as 77·0 per cent. Compare this with New South Wales (Census 1891), where the metropolitan population of Sydney and Suburbs represents as much as 33·85 of the total population ; yet its total urban population is estimated at only 66·17 per cent.

These considerations will enable any one to correctly interpret the following table dealing with the relative growth of urban and rural districts in Tasmania since 1857, as indicated by the metropolitan district of Hobart and Suburbs and other urban districts of over 3000 inhabitants, as contrasted with the growth of rural districts under 3000 inhabitants, thus : —

Progress in Metropolitan, Total Urban, and Rural Districts during Period 1857-1901.

Census.	Hobart and Suburbs.	Total Urban.†	Rural.	All.
		Absolute Number of Population.		
1857	24,454	26,132	55,360	81,492
1861	24.773	29,808	60,169	89,977
1870	26,004	29,760	69,568	99,328
1881	27,248	33,870	81,835	115,705
1891	34,103*	42,113	104,554	146,667
1901	35,508*	52,741	119,734	172,475
		Per cent. to Total Population.		
1857	30·01	32·07	67·93	100
1861	27·54	33·13	66·87	100
1870	26·18	29·96	70·14	100
1881	23·55	29·27	70·73	100
1891	23·25*	28·70	71·30	100
1901	20·59*	30·58	69·42	100

*Includes the Suburbs of Bellerive and Beltana. †Excluding Suburbs.

The significance of the observations already made regarding aggregations in urban centres as frequently erroneously inferred from restricted attention to the accidental proportions which the capital city bears to the total population is most manifest in the above comparative table. It shows that urban centres of over 3000 inhabitants in Tasmania have gradually declined proportionally to

total population from 32·07 per cent. in 1857 to 24·75 per cent. in 1901. Inversely the rural population between the same periods has increased gradually from 67·93 per cent. in 1857 to 75·25 per cent. in 1901.

Still more marked is the danger of inferring truly the growth of rural and urban populations respectively, from the accidental proportions which the capital city of a country bears to the whole population, as shown by the following illustration :—

Proportion of Population of Capital City and Total Urban Centres to Total Population of the Country.

Per Centage.

Country.	Capital.	Total Urban.	Rural.	All.
England and Wales	13·95	76·05	23·95	100
New South Wales	33·85	66·15	33·85	100
Tasmania	20·59	30·58	69·42	100

The difference in favour of the percentages of the rural populations of the two smaller countries would be much greater if the limits of what may fairly be regarded as urban populations were the same in all places under comparison. The limit of the older and more densely populated country is very much higher.

Further information regarding progress in Urban and Rural Districts since the year 1857 is given in the following table :—

Progress in Urban and Rural Districts contrasted during 1857-1901.

Comparative Progress of the Population of Cities, Towns, Villages, and Mining Centres during the last Intercensal Period.

The following table has been specially prepared to indicate the comparative rate of growth of population in the two cities, and in the various small centres of population which had been in existence prior to the Census of 1891 ; and also to show, in a general way, the trend of what may be termed the "internal drift of population" as in contradistinction to the "growth by natural increase."

The artificial restriction of comparison to centres of 100 persons and over, however, conceals to some extent the actual or true rate of growth, in the case of those small communities which, during the last Intercensal period, have passed from below to above the limit which the necessities of tabulation restrict recognition as distinct centres considered apart from the population sparsely scattered throughout the country in a less gregarious state.

The nature of the principal industries carried on in the various centres is indicated by letters thus:—

A	Mainly engaged in	agricultural pursuits.
P	,,	pastoral pursuits.
A & P	,,	agricultural and pastoral pursuits.
F	,,	fruit-growing pursuits.
D	,,	dairying pursuits.
TG	,,	timber getting pursuits.
CM	,,	coal mining pursuits.
GM	,,	gold mining pursuits.
SM	,,	silver mining pursuits.
SCM	,,	silver and copper mining pursuits.
SLM	,,	silver and lead mining pursuits.
SH		suburb of Hobart.
TM	Mainly engaged in	tin mining pursuits.
SL		suburb of Launceston.
WP		watering place.

* Indicates a new centre, or that the population was under 100 persons at the time of the previous Census.

St. Leonards	4·33	,,	,,
Sheffield	3·96	,,	,,
Ulverstone	3·10	,,	,,
* New Town	1·13	,,	,,
Avoca	1·10	,,	,,

* Exclusive of Moonah. The latter district was formerly included in New Town. If it were included the original district of New Town would have shown an increase of 758, or 33·13 per cent.

Centres showing a Decrease.

The following 27 centres show a decrease as compared with the previous Census. It is significant, however, that few of the centres showing a positive decrease are to be found in the western or north-western portions of the State, which during the last intercensal period have, as a whole, made remarkable progress:—

Percentage Decrease since last Census.

Glenorchy	0·58 per cent. decrease
Hobart, City*	1·00 ,,

Newly Established Centres.

The following is a list, in the order of their importance, of 16 centres of over 100 inhabitants, which have grown up or have become established since the previous Census:—

	Population, No.
Queenstown	5051
Gormanston	1760
Moonah	732
Pillinger	637
Mount Stuart	523
Geeveston	289
Gould's Country	254
Beltana	251
Bismarck	206
Tea Tree	184
Alberton	183
Broadmarsh	161
Kettering	152
Alveston	125
Dover	121
Lisle	119

* Although the City of Hobart proper shows a slight decrease as compared with the former Census, the City and Suburbs, or Greater Hobart, shows an increase of 1511, or 4·43 per cent. This is a common experience in the history of the growth of all chief centres of population.

From the foregoing analysis we find that the cities, towns, and villages, &c., over 100 inhabitants, which numbered 79 in 1891, had increased to 88 in 1901 ; *i.e.*, an increase of 9; and the population of these centres had apparently increased by 18,666 persons, or 23·21 per cent.

This, however, must be qualified by the consideration that the population of the 20 new centres in 1901, contains also the unknown element under 100 persons which existed in an embryo state in a number of these localities when the previous Census (1891) was taken. Even with this qualification, it is clear on the whole, that the city, town, and village populations have increased at a higher ratio than the residue scattered throughout the State, engaged in the primary industries of farming, mining, or timber-getting.

The highest increase, absolutely and relatively, is to be found in the centres of the new mineral fields in the Western and Midland Division ; and the lowest increase, absolutely and relatively, curiously enough, is to be found in the North-Western Division, where as regards increase in the rural element (under 100 persons) this division stands highest of the four. It is evident that this arises from the very rapid way in which the development of farm-holdings has taken place in this promising and progressive agricultural region of the State.

SECTION IV.—THE HABITATIONS OF THE PEOPLE.

The first attempt to obtain definite information as regards the habitations of the people was made in the year 1841, when the total number of dwellings recorded was 7758. Of these, 3459 were built of brick or stone, and 3489 of wood. At the last Census, or sixty years afterwards, it was found that the total number of dwellings had increased to 36,470. The population in 1841 was 50,216 ; in 1901 it increased to 172,475. Thus it would appear that while the number of distinct dwellings within this interval has increased 4·70 fold, the population has only increased 3·43 fold. This, no doubt arises from the fact that in the earlier stage of settlement the aggregation of large numbers of military and other persons living in barracks did not require the same number of distinct dwellings as in the altered circumstances of the State at the present time.

This is borne out by reference to the number of persons to each dwelling in 1841 and 1901, respectively ; in the former period the number of persons to each dwelling is found to be as high as 7·32 ; in the latter it is only 5·05.

The normal number of persons to each inhabited dwelling in the United Kingdom has ranged from about 5·33 in 1871, to 5·19 in 1901. In Tasmania during the same period the number of persons to each inhabited dwelling has similarily ranged from 5·50 in 1870 to 5·05 in 1901 ; the average of the later Census years being 5·26 persons per inhabited dwelling. The experience in the Mother Colony of New South Wales, in this respect, has been similar to that of Tasmania.

The two subjoined tables have been prepared to show various particulars relating to the number and character of the dwellings of the people at each Census since the year 1841.

The particulars as far as have been ascertained refer to :—

- The number of dwellings.
- Nature of occupancy.
- Materials employed in Construction.
- Rental :—
  - Number of dwellings under particular denominations as regards cost of annual rental.
  - Aggregate annual value of rental under the same.
- The number of persons living in different classes of dwellings.

Comparative Table showing principal particulars relating to the Habitations of the People at each Census since the Year 1841.

From the preceding tables we may perceive that in nearly every respect there has been a great improvement in the condition of the people, as indicated by the character of the habitations in which they live.

Inhabited Houses.—The number of inhabited houses (34,165) has increased by 6141, or 21·91 per cent., since the previous Census. This is a larger absolute increase than in any previous intercensal period, with the exception of the increase in the very prosperous period 1881-91, which was a little higher, viz., 6166.

As regards the character of the dwellings themselves, as indicated by the number of rooms per dwelling, and the number of persons living in improved dwellings, both as regards accommodation and value, the improvement at the last Census is very marked. The increasing proportion of those living in dwellings of Three Rooms and over is very noticeable, thus :—

Percentage Proportion of Dwellings having Three Rooms and over.

1881.....	72·65 per cent.
1891.....	77·75 „
1901.....	80·82 „

This evidence of improvement in the material condition of the people is also confirmed by reference to the proportion of inhabited dwellings having an annual rental value of £10 and over. Thus in 1891 the percentage proportion of dwellings assessed at a rental value of £10 and over was 60·95 per cent. of all dwellings ; in 1901 this proportion was increased to 68·28 per cent.

These two factors are the best indices which we could select for determining the condition of the broad masses of the people. They indicate, most unmistakably, that a vast improvement in the homes of the people has taken place, and the figures shown also represent a very large percentage of the better class of dwellings when compared with the manner in which the masses of the people are lodged in the great cities of the United Kingdom. In Glasgow, for example, Mulhall states on the authority of Mr. Hoey, that only 30·04 per cent. of the people were lodged in houses of three rooms and over in the year 1889. The importance of increased house room, from a health point of view, was at the same time clearly proved by Mr. Hoey in a paper read by him at the British Association, 1889, by the following illustration of the death-rate in that city, referable to the more or less crowded modes of lodgement, thus :—

Living in	Number of Souls.	Death-rate per 1000.
One room	133,000	35·0
Two rooms	235,000	27·7
Three to four rooms	158,000	19·5
Five or more rooms		11·2
Total	526,000	25·0

The superior condition of the mass of the people in Tasmania, as regards the class of dwellings occupied by them, is also strikingly borne out when compared with the class of dwelling in which the mass of people in England and Wales were lodged in the year 1886, thus —

Percentage of Inhabited Dwellings of the Annual Value of £20 and over.

England and Wales, 1886	15·35 per cent.
Tasmania, 1901.....	33·50 „

The vast difference between the lodgement of the masses of the people in a crowded city like Glasgow and in Tasmania is shown by the following contrast :—

Living in	Tasmania, 1901.	Glasgow, 1889.
	Per cent.	Per cent.
One room	8·85	25·28
Two rooms	10·43	44·68
Three to four rooms	38·50	30·04
Five and more rooms	42·32	
Total	100·00	100·00

Photo-lithographed at the Government Printing Office, Hobart.

Photo-lithographed at the Government Printing Office, Hobart.

A similar contrast could be furnished also in favour of the sister States of Australasia. No better index of the improved condition of the mass of the people of these States could be given than that afforded by the foregoing contrasts, wherein it is shown that about 20 per cent. of the lower industrial class have, by improved local conditions, been raised into the class next above them in social order, in Europe.

The distribution, density and other particulars relating to Dwellings in the various Electoral Districts are best studied in tabular form, as follows :—

Dwellings classified according to Distribution, Density, &c., in Electoral Districts.

	Inhabited Dwellings.		Dwellings per Square Mile.	Persons to each Dwelling.	Percentage of Dwellings.		
	No.	Per cent. to Total.			Tents.	Having One Room only.	Under £10 Annual Rental.

SECTION V.—AGES OF THE PEOPLE.

To ascertain the number of persons living at each age period is one of the most important objects of a Census inquiry.

The knowledge which has enabled the higher civilised communities to accurately gauge and provide for the better education of the young ; the maintenance and improvement of the general health ; the humane provision for the support of the widow and orphan; the care of the young and helpless in mines and factories ; just electoral representation, and many other important matters relating to the welfare of the people, all depend, most intimately, upon the accuracy with which we gauge the number of the living and dying at each age of life.

Owing to various causes—although fairly accurate results are obtained for the quinquennial and decennial groups of ages—the Census method of inquiry has never been able to furnish, directly, a strictly accurate statement of the ages of the people *at each single year of life.*

As to the statement of the exact age at each year of life, many persons are careless ; some, at the advanced ages, do not remember to a year or two the correct age. Persons of extreme old age are in some cases inclined to exaggerate their age, while those between 20 and 40 have a tendency to understate their age to a small extent. Males verging upon the age of 21, in many cases, state their age as 21. This may be due to a desire to avoid difficulties in the case of minors about to marry, or where there is undue eagerness to obtain the electoral rights of manhood suffrage. Upon the whole there is disclosed by the Tasmanian Census, as in the Censuses of all other countries, a well marked tendency among such people to put themselves down at the nearest round period, notably at 30, 40, 50, 60, 70, 80 ; and in lesser degree at the intervening nodes, 25, 35, 45, 55, 65, 75, 85. The round decennial periods seem to act like attracting cores round which the unconscientious and those whose ages are imperfectly known, segregate or cluster at the expense of the one or two contiguous years ending in the lower 9, or in the higher 1, especially the latter. The constancy of these slight false nodes was graphically illustrated by me at the last Census, and they correspond very closely with the results as obtained by the Census of 1901, as may be seen by the following illustration :—

Segregation of Ages at Decennial Periods, 30 *to* 80, *at the Expense of the Contiguous Years.*

	30	40	50	60	70	80	90
				Males.			
9	1295	1160	587	354	179	114	18
0	1547	1456	783	540	343	139	7
1	1130	911	495	289	182	87	9
				Females.			
9	1185	960	556	328	191	64	10
0	1339	1264	668	523	318	97	19
1	978	763	354	262	153	74	6

To some extent the yearly variations in the balance of migration and natural increase of births over deaths may account for some proportion of the irregularities from the law of decrease in each succeeding year; still it is evident, from the intensity and regularity of the segregation at the decennial nodes that they are mainly due to the causes referred to.

Although it would appear, therefore, that the number of persons living *at each single year of age* cannot directly be ascertained exactly from the figures actually obtained from Census Schedules, the statistician can arrive at a very close approximation of the truth by the aid of the more accurate quinquennial and decennial groupings. In practice this method of determining the number of persons actually living at each single year of age has been found to approximate very closely to the truth, and to afford a practically safe foundation, in the hands of the skilled actuary, for the safe conduct of all matters relating to annuities and life insurance.

For Health Standards and other useful purposes, the information respecting ages, gained by the ordinary quinquennial groupings, fulfils all the necessary conditions with the utmost perfection.

With these preliminary observations regarding ages, we may now proceed to single out the more important generalizations for consideration and comparison.

Of the 172,475 persons returned at the Census of 1901, the ages of 172,328 persons (89,504 males—82,824 females) were specifically recorded in the householders' schedules, of which the following is a correct summary, by quinquennial and other useful age-groupings:—

Ages of the People, 1901.

Showing the Numbers and Proportions of Persons and Sexes under various Age-Groups.

	Numerical.			Centesimal.		
	Persons.	Males.	Females.	Persons.	Males.	Females.

65–70	2613	1292	1321	1·51	1·44	1·59
70–75	2033	1123	910	1·18	1·25	1·10
75–80	1270	756	514	0·74	0·84	0·62
80–85	761	459	302	0·44	0·51	0·36
85 and over	346	199	147	0·20	0·22	0·17
Unspecified children	...	...	...	...	...	...
Unspecified adults and altogether	147	120	27	0·17	0·13	·03

The above summary gives in a convenient form all the most useful generalisations relating to age. To make it still more serviceable for general information the whole of the population, excluding the 147 unspecified, are also grouped approximately under headings, which convey in a more natural way* the composition of the people as determined by age and sex, as in the following summary :—

Population by Natural Age-Groups.—Census 1901.

Natural Groups.	Numerical.			Centesimal.		
	Persons.	Males.	Females.	Persons.	Males.	Females.
Infants under 1 year	4606	2333	2273	2·69	2·62	2·75
Children 1 to 5 years	16,259	8369	7890	9·43	9 35	9·53
Boys and girls, 5 to 15 years	43,160	21,809	21,351	25·05	24·37	25·78
Youths and maidens, 15 to 20 years	18,451	9388	9063	10·71	10·49	10·94
Young men and women, 20 to 30 years	30,247	15,537	14,710	17·55	17·36	17·75
Middle-aged men and women, 30 to 50 years	40,071	21,717	18,354	23·25	24·26	22·18
Old men and women, 50 years and over	19,534	10,351	9183	11·32	11·55	11·07
Total	172,328	89,504	82,824	100·00	100·00	100·00

*This manner of grouping was introduced by the late Mr. Hayter in his most excellent Report on the Census of Victoria for the year 1881.

Contrast of Principal Age-Groups with former Census Periods.

The following Summary is designed to show how far the proportion of persons, living at the more important Age-Groups in 1901, agree with or differ from similar groups at the three previous Censuses, 1870, 1881, and 1891 :—

Ages.	Numerical.				Centesimal.			
	1870.	1881.	1891.	1901.	1870.	1881.	1891.	1901.
Persons	99,328	115,392	146,077	172,328	100·00	100·00	100·00	100·00
Under 5 years	14,302	16,191	21,466	20,865	14·40	14·03	14·69	12·12

Under 5 years	7185	8126	10,839	10,702	13·59	13·34	14·08	11·97
5 to 65 years	42,520	48,916	61,853	74,973	80·46	80·28	80·33	83·77
65 and over	3148	3882	4298	3829	5·95	6·38	5·89	4·26
20 to 40 years (soldier's age)	10,862	15,805	24,678	28,221	20·55	25·94	32·05	31·54
21 years and over (adults)	...	30,842	40,037	45,961	...	50·43	51·62	51·35
20 to 60 years (worker's age)	22,431	25,576	34,715	42,047	...	41·82	45·08	46·98
Females	46,475	55,543	69,107	82,851	100·00	100·00	100·00	100·00
Under 5 years	7117	8065	10,627	10,163	15·32	14·81	15·38	12·28
5 to 65 years	38,146	44,662	55,831	69,467	82·08	82·01	81·12	83·88
65 and over	1212	1741	2629	3194	2·60	3·18	3·50	3·84
15 to 45 years (fertile age)	...	24,178	30,579	39,033	...	44·40	44·27	47·11
21 years and over (adults)	...	24,922	32,598	40,438	...	45·70	47·17	48·82

In the foregoing table the proportion of persons living under 5 years and over 65 years respectively, is singled out specially, as the proportion of children and aged people in a community largely determines the true significance of average Birth-rates and Death-rates, which are commonly calculated on the basis of the total population, without necessary qualifications as to the age-composition upon which the value of such averages chiefly depends for comparative purposes.

One of the most noticeable points in this comparison with former periods is the considerable fall in the number of children living under the age of five years as compared with the Census year 1891, notwithstanding the increase of 17·61 per cent. in the total population. The proportion of this important age-group to the whole population—12·12 per cent.—is much lower than recorded in any previous Census in Tasmania.

The lowered proportion of this important age-group at the last Census is undoubtedly due to the remarkable fall in the Birth-rate during the last decade, and especially during the last five years of the decade. During the same period a similar experience of this wonderful decline in the birth-rate has been observed in nearly all civilised countries, and particularly so in the United Kingdom, and in the States of Australia and New Zealand.

Mr. Coghlan, the thoughtful and accomplished Statistician of New South Wales, in his latest issue of "The Seven Colonies of Australasia," has drawn particular attention to this grave change in the social condition of the people in the following terms :—

"It is a matter of common knowledge that for some years past the birth-rate has been declining in the colonies, and so important is the subject, not only as regards the growth of the population but also as affecting the general progress, that in 1899 the author (Mr. Coghlan) made a special investigation into the question of childbirth in Australia, but more particularly with reference to New South Wales. The conclusions arrived at with respect to that colony, however, may be held to obtain for all the others, seeing that the conditions of living do not differ materially in any of them. During the course of the investigation it was found, first, that for all women the proportion of fertile marriages is decreasing ; second, that amongst fertile women the birth-rate is much reduced as compared with what it was twenty years ago ; and third, that Australian-born women are not so fertile as the European women who have emigrated to the colonies, although how far this is due to natural sterility, and how far to prevention, it is impossible to say. It was also found that the decline had been persistent and regular since 1881, and this restriction of births in a young country like Australia, where immigration is discouraged, is a matter which must have far-reaching results, although its economic effects are only beginning to be seen, and should claim the serious consideration of all thoughtful people."

If we now turn to the proportion of persons of 21 years of age and over (adults)—we find at the last Census that they represent almost exactly half the population (50·18 per cent.); persons between 5 and 65 years of age represent 83·81 per cent.; and the group 65 and over represents

4·26 per cent. of the total population. Thus it appears that the two great extremes, 0-5 and 65 and over, both show a decline in their proportions, as compared with former Census periods; while the great intervening group, 5-65, shows a markedly increased proportion to the whole. Although upon the whole the males at "Worker's age"—20-60—preserve nearly the same proportion as at the previous Census, the proportion living at the most effective age-period 20-40, or "Soldier's age," shows a slight decline. It is probable that this decline at the most vigorous age, as regards the male population, is due to the smaller demand for labour locally since days when a larger amount of railway and other public works were being carried on throughout various parts of the State. The greater attraction for common labour in the mining centres of Western Australia, and the considerable migration to South Africa no doubt has drawn from Tasmania a considerable number of young men at this the most effective age-group.

Contrast of Age-Group Proportions with Other Countries.

The full significance of the proportions at particular age-groups, however, can only be appreciated by comparisons with other countries. But even then caution must be used in drawing inferences from particular cases. A relatively low or high proportion of any age-group may be the effect of very different causes. This applies particularly to age-group proportion 20-65. In Western Australia, the high proportion of group 20-65, viz., 62·20 per cent., is mainly the result of the *intrusion of an abnormally large number of immigrants* drawn from other countries. In France an abnormally high proportion is maintained within the same age-group, *owing to a continuous and abnormally low birth-rate* tending to produce an almost stationary population.

Another cause tending to increase the proportions of the older age-groups may be found in countries where, owing to climatic or other causes, the death-rate of children under 5 years is excessively high.

Thus, immigration, a stationary population caused by a low rate of fertility, and a prevailing high death-rate among children, may equally be potent in producing an abnormally high proportion at the higher age-groups.

On the other hand, a high rate of fertility tends to diminish the proportion of ages at all the higher age-groups.

Proportion of various Age-Groups in Tasmania contrasted with similar Groups in various Countries.

The two following tables have been prepared to illustrate more particularly the effects upon age-group proportions arising from differing causes as indicated in previous remarks:—

Proportions at Five Age-Periods compared.

Persons.

Ideal Life Table—Stationary Population§	...	25·51	44·03	30·46	100·00	57·60	...	...

* Including Half-Castes.
† Including Aborigines.
§ Text Book, Institute of Actuaries—G. King, 1887.

From these two tables it would appear that France affords the best example of a comparatively stationary population ; and it is interesting to observe how closely its proportions, at the various age-groups, correspond with those of an Ideal Stationary Population, as determined by George King (" Text Book, Institute of Actuaries, 1887 ").

Comparative Statement showing proportion of the Population living within principal Age-Periods in each of the six States of Australasia and New Zealand, exclusive of Aborigines (Census 1901).

* Exclusive of both Half-Castes and Aborigines. † Including Aborigines, 2808.

SECTION VI.—CONJUGAL CONDITION OF THE PEOPLE.

Of the total population, as ascertained at the last Census (172,475), particulars relating to the age and conjugal condition of 171,965 persons, or 99·70 per cent. of the whole, have been ascertained. The proportional analysis of these may, therefore, be safely taken as applying to the total population.

The following summary gives, under particular age-groups, a sufficiently comprehensive view of the number and percentage proportion living under the several conditions :—

Conjugal Condition in Tasmania, 1901.

NUMERICAL.

Numbers specified.	All ages specified.	Under 15.	15–20.	20–45.	45 & over.	Males, 20 and over. Females, 15 and over.

Females—						
Married	30·78	...	3·66	59·75	59·27	49·71
Widowed	5·67	...	00·5	2·70	31·82	9·16
Never married	63·55	100·00	96·29	37·55	8·91	41·13
TOTAL	100 00	100·00	100·00	100·00	100·00	100·00

* Including 57 persons (35 Males, 22 Females) returned as Divorced.

From the foregoing analyses it is apparent that for every 100 persons of all ages there are—

Proportion in relation to all Persons.

	Persons.	Males.	Females.
Married	29·80	28·89	30·78
Widowed and Divorced	4·23	2·90	5·67
Never married	65·97	68·21	63·55
TOTAL	100·00	100·00	100·00

If we restrict the relative proportions to all married and marriageable persons, however—say, males 20 years and upwards and females 15 years and upwards—we obtain the following proportions in relation to all married and marriageable persons; thus :—

Percentage Proportion in relation to Married and Marriageable Persons.

	Persons.	Males.	Females.
Married	51·96	54·43	49·71
Widowed and divorced	7·39	5·47	9·16
Never married	40·65	40·10	41·13
TOTAL	100·00	100·00	100·00

Marriageable Men and Women.

To ascertain the full extent of marriageable persons it is necessary to add the widowed and divorced persons to bachelors and spinsters, as in the following abstract :—

Conjugal Condition.	Marriageable Men (20 years and upwards.)	Marriageable Women (15 years and upwards.)	Women to every 100 Men.
Bachelors and spinsters, 1901	18,993	21,052	110·95
Widowers, widows, &c., 1901	2593	4693	181·09
All marriageable persons, 1901	21,586	25,745	119·29
All marriageable persons, 1891	18,585	19,361	104·18
All marriageable persons, 1881	11,889	12,733	107·10

Although there were, in 1901, 119·29 marriageable women to every 100 marriageable men, it appears there were only 110·95 spinsters to every 100 bachelors. In 1891 there was a less proportion of marriageable women in relation to marriageable men, being 104·18 in 1891 to 119·29 per cent. in 1901.

Distribution and Proportion of all Marriageable Women over 15 years of age to all Marriageable Men over 20 years of age.

As usual the larger number of marriageable women over 15 relative to marriageable men for all ages over 20 are found in the cities, and the smallest in country districts, especially so in the partially settled mining districts; thus :—

Marriageable Persons.	Marriageable Men.	Marriageable Women.	Women to every 100 Men.
City of Hobart	2808	5080	180·08
City of Launceston	1782	3695	207·40
Country Districts	16,996	16,970	99·85
The State	21,586	25,745	119·29

The smallest proportion of marriageable women to men was in the mining district of Lyell, viz., 25·45 per cent.; and the largest in Queenborough, where it was as high as 247·30 per cent.

Proportion Married and Single Persons of all Ages at the last Eight Census Periods.

The proportion of married and single at various age-periods can only be ascertained for the three last Census periods. The proportion for all ages at the last eight Census periods are shown in the following abstract :—

Proportion per cent. Married and Single.

Census year.	Married.	Single.
1847	27·43	72·57
1851	28·35	71·65
1857	35·71	64·29
1861	35·02	64·98
1870	31·27	68·63
1881	30·14	69·86
1891	29·93	70·07
1901	29·80	70·20

Distribution and Proportion of Marriageable Women to Marriageable Men at the normal Marriageable Age.

The conclusions which may be drawn from the preceding analysis of the proportions of marriageable men and women of *all ages* over the minimum prescribed for each sex require some further qualification before we can obtain a correct view of this important and interesting question.

To obtain a right conception of the proportions of the numbers of marriageable persons of both sexes attention should be restricted to the *normal* marriageable age-period. From the analysis of the marriage registers it has been ascertained that about 90 per cent. of all males who enter the marriage state marry between the ages of 20 and 40, while as much as 95 per cent. of females who enter the marriage state marry between the ages of 18 and 35 years. It has also to be borne in mind that all widowed and divorced persons are included in the preceding analysis of marriageable persons.

As most of the latter are well advanced in age, and few of which will again enter the marriage state, they ought to be eliminated from the comparison. It is further observed that these widowed and divorced persons of advanced age as a rule congregate in relatively greater proportions within the larger centres of population, as in Hobart and Launceston, and thus appear to swell unduly the proportions of the numbers of women to men at the *normal* or *effective* marriageable age.

To afford a more correct view of the proportions of available marriageable men and women within the limits of the effective or normal marriageable age, the following analysis has been prepared, based upon the condition of all males living between the ages of 20 and 40, and of all females living between the ages of 18 and 35 years, thus—

Synopsis of the Proportions of Marriageable Men and Women in the chief divisions of the State living within the limits of the Effective or Normal Marriageable Age.

Division.	Population.	Marriageable Persons.		
		Normal Marriageable Age.		
		Men.	Women.	Women to 100 Men.
	No.	No.	No.	Per cent.
Lyell	10,451	2518	536	21·3
Zeehan	6772	956	393	41·1
Fingal	5931	550	320	58·2
Devonport	7685	623	462	74·2
Other Country Districts	98,960	8252	7017	85·0
Hobart City	24,654	2191	2535	115·7
Launceston City	18,022	1309	2018	154·2
Tasmania	172,475	16,399	13,281	81·0

Thus it would appear that, while in the cities of Hobart and Launceston, at those ages at which men and women are most likely to marry, the number of marriageable women exceeds the marriageable men (the ratio in Launceston being about two men to every three women); the proportions of mining and country districts show that the numbers of marriageable men greatly exceed the numbers of marriageable women, and in the State, as a whole, it is shown that, at the ages at which men and women are most likely to marry, the proportion between the sexes equal about five men to every four women.

SECTION V.—BIRTHPLACES OF THE PEOPLE.

Of the total population at the last Census (172,475) particulars regarding the place of birth of 173,467 persons were ascertained. Of these 170,243, or 98·72 per cent., were born in British possessions, and 2224, or 1·28 per cent., in Foreign Countries. Those born in Australasia numbered 149,155, or 86·50 per cent. The details are as under:—

Born in Australasia.

	Persons.	Rate to Total Population.
Born in Commonwealth:—		
Tasmania	136,629	79·23
New South Wales	2075	1·20
Victoria	7949	4·60
Queensland	288	0·17
South Australia	887	0·52
Western Australia	96	0·06
Total Commonwealth	147,924	85·78
Born in New Zealand	1193	0·70
„ Fiji	24	0·01
„ Australasia (undefined)	14	0·01
Total Australasia	149,155	86·50

As compared with the previous Census the number of persons born in Tasmania has increased by 28,728, or 26·62 per cent., while its percentage to the whole population has increased from 73·88 per cent. to 79·23 per cent. Similarly, the number of persons born in other parts of Australasia has increased by 5198, or 70·92 per cent., while their percentage to the total population has increased from 5·02 to 7·27 per cent.

The number of persons born in various parts of the United Kingdom are as under:—

	Persons.	Rate to Total Population.
United Kingdom:—		
England and Wales	12,942	7·51
Scotland	2986	1·74
Ireland	3887	2·26
Total United Kingdom	19,815	11·48

It is of special importance to notice that the number of persons born in the United Kingdom at the last Census shows a marked decline, both numerically and centesimally during the last Census period. This arises in a large measure from arrest of immigration during the last forty years augmented by the larger proportion of deaths occurring among the earlier immigrants, who, within the last ten years, reached the final limits of ripe old age.

The decline, numerically and centesimally, of those born in the United Kingdom, whose descendants form the greater part of the existing population of Tasmania, is best appreciated by a glance at the following figures :—

Born in the United Kingdom.

Census Year.	Persons.	Per cent. to Total Population.
1870	37,145	37·40
1881	28,243	24·49
1891	26,975	18·47
1901	19,815	11·48

Born in other British Possessions.

There were only 1273 persons, or ·74 per cent., of the total population, stated to have been born in other British Possessions—that is in British Possessions outside of Australasia and the United Kingdom. The details are as under :—

Birthplace.	Persons No.

Total		1273

Born in Foreign Countries, including their Dependencies.

The total number of persons enumerated at the last Census as having been born in foreign countries is stated to have been 2224, or only 1·28 per cent. of the total population. This shows a considerable decrease, both absolutely and relatively, as compared with the figures of the previous Census. The decrease, as compared with the Census of 1891, represents 715 persons, being a decrease of 24 33 per cent. This decrease of Foreign-born in our population is general, although by far the greatest decline is in the number of Chinese, thus :—

Born in.	Decrease, Persons.	Per cent.
China	459	48·67
Germany	145	15·79
France	21	27·27
Other Foreign Countries	90	8·99
Total	715	24·33

Further details as to the number of persons born in Foreign Countries and their dependencies are as follow :—

Length of Residence of Persons living in Tasmania born elsewhere.

Of the 35,846 persons living in Tasmania at the last Census, particulars as to length of residence within the State have been ascertained in respect of 32,876, or 91·71 per cent. The number of years' residence arranged in quinquennial periods is as follows :—

Length of Residence.

Persons—Numerical.

Although the number of persons living in Tasmania at the last Census (35,846) born elsewhere only represents about one-fifth of the total population, and although fully one-half of these are the survivals of persons born within the United Kingdom, the latter proportion does not adequately indicate the ancestry or origin of the existing population of Tasmania. The ancestry or origin of the present population is better indicated by the survivals of those born elsewhere than in Tasmania who have resided in the latter place for a period of 25 years and over.

The preceding analysis would seem to indicate, so far as racial origin is concerned, that fully 91 per cent. of the total population have been derived from British and Irish ancestry.

Tasmanians in each Australasian State or Colony.

At the last Census there were 30,535 Tasmanians living in the other six sister States or Colonies. These, with the 136,629 enumerated living in Tasmania, make a total of 167,164 persons of Tasmanian birth living in the seven Australasian Colonies.

The number of persons born in the six sister Colonies enumerated as living in Tasmania, was 12,488. This shows upon the whole that the sister Colonies have been the gainers by 18,047 persons in migratory exchange. During the last intercensal period, however, Tasmania has had the balance of inter-migration in its favour, as the balance against her was stated to be 19,418 persons; that is, the migratory balance during the last decade was 1371 persons in favour of Tasmania, and against the six sister States.

The following abstract gives the details of the distribution of the 167,164 persons of Tasmanian birth living at the last Census in the seven Australasian Colonies, together with corresponding figures at the time of the previous Census:—

Tasmanian-born in each Australasian Colony.

Living in—	Numerical. 1901.	Persons. 1891.	Per Cental. 1901.	Per Cental. 1891.
Tasmania	136,629	107,901	81·74	80·15
New South Wales	7577	5851	4·53	4·35

New Zealand	3720	2629	2·22	1·95
Total Tasmanian-born	167,164	134,613	100·00	100·00

SECTION VIII.—THE EDUCATION OF THE PEOPLE.

In my report on the previous Census of Tasmania (1891) I stated that it is only in a very narrow and restricted sense that statistical information gained by the ordinary Census methods can be accepted as an index of the "Education of the People." At best it only attempts to gauge the proportion of those who have acquired the elementary power to receive or impart ideas to others by means of at least one known system of written or printed symbols. Of the extent, nature, or value of the ideas themselves, or of the power to receive or impart them in perfection, in one or more symbolic forms, as tested by the varied educational standards, the educational statistics of the ordinary Census tables afford only the very slightest clue.

Notwithstanding these objections, there is much to be gained by the knowledge obtained from the statistics which disclose the proportion of persons who can read and write at each age-period from 10 years and upwards; and valuable information is also afforded in respect of the means provided, and the extent to which these are availed of at school-age in every part of the country. Thus, although, directly, the comparative power to read and write at each age and in each district conveys little information of the nature and extent of the education imparted, it is eloquent as an index in revealing comparatively how far the ordinary but invaluable culture of the Common School system extends or is lacking; and also it affords a very safe measure of the success attained in other branches of education which are the usual concomitants of tuition in reading and writing in any tongue.

As the power to read and write therefore, is regarded mainly as evidence of the possession of a certain amount of intelligence obtained from the training in all other matters within the Common School curriculum, it has been deemed advisable to include all foreigners who can read and write under this category, irrespective of the tongue or symbol used, as there is no more justification, on educational grounds, for excluding Englishmen who can only so express themselves in their mother tongue. In the detail tables, however, the number of those who can only read, or read and write in a foreign tongue, are given separately, so that comparisons may be made with other places where a different method of classification obtains.

In making comparisons, it is obvious that all infants and children not yet arrived at the age for training in reading and writing should be excluded. Indeed it is the results of the training at the end of the normal tutelary stage which should be sought for in comparison with other periods or countries, rather than the misleading averages, which include not only the young under and during the age of the process of training, but also aged persons, whose averages tend to conceal the success or otherwise of the existing machinery provided for the education of the young of the community.

The classification adopted at the last Census, by the Statisticians of Australasia, for obvious reasons, excludes all ages under five years. In phrase "for all ages" where used hereafter in tables or otherwise, it must be understood that ages under five years are wholly excluded.

The following table shows the percentage proportions of all who could read and write, read only, and could not read, at the principal groups, as ascertained at the last Census in Tasmania :—

Percentage Proportion of all Specified Ages in Tasmania, 1901, *who could Read and Write, Read only, and could not Read at the principal Ages, showing the proportions at each principal Age-Period.*

Unspecified as regards Ages	82·44	4·05	13·51	87·93	5·18	6·89	62·50	0·00	37 50

In the above very full analysis is shown the percentage proportions of all over the School-age—14 years and over—under various categories. To measure the progress of education comparisons with the results of the previous Census of 1891 are given as follows :—

	1901. Per cent.	1891. Per cent.
Read and Write, 14 *years and over*—		
Males	92·17	87·94
Females	93·94	89·74
Persons	93·02	88·77
Read only, 14 *years and over*—		
Males	1·69	3·24
Females	1·98	3·81
Persons	1·83	3·50
Could not Read, 14 *years and over*—		
Males	6·14	8·82
Females	4·08	6·45
Persons	5·15	7·73

The proportions at the higher stage—read and write—at each quinquennial period is as usual highest at age-period 15-20, among which females (98·04 per cent.) show the best results, thus :—

Females	98·04 per cent.
Males	95·16 „
Persons	96·58 „

As the percentages of those who can read and write at successive quinquennial periods gradually diminish—being as low as 59·87 per cent., in the oldest (Females, 85 and over)—they afford the best indication that can be given of the decided but gradual improvement in the means of education that has taken place at each quinquennial since the beginning of the last century. That even the present means of education is capable of producing still higher results, as years eliminate the poorer results and reduce the proportions of past efforts, is shown by the figures which record more perfectly the results of the educational system now in operation—that is, at the age-period 15-20 years—among which those who cannot read and write do not now exceed 3½ per cent. of those living at that age.

Improvement in Education since 1891.

The tendency towards improvement is also clearly manifested in comparisons at different age-periods, as shown by the Census returns of 1881, 1891 and 1901 ; thus :—

Percentage Proportions, 1881, 1891, 1901.

Read and Write—Persons.	1881.	1891.	1901.
Ages 5–15	61·61	67·04	76·20
15–20	87·45	95·04	96·58
5 and over	75·23	83·27	88·14
15 „ „	80·58	88·57	92·85
20 „ „	78·99	87·36	92·09

Education of Children.

The education of children between 5 and 15 years of age upon the whole shows considerable improvement, as compared with the two previous Censuses ; thus :—

Proportion per 100 Living, Ages 5–15.

	1881.	1891.	1901.
Urban Districts—			
Read and write	72·30	73·74	81·27
Read only	12·35	8·27	3·90
Cannot read	15·35	17·99	14·83
Rural Districts—			
Read and write	57·44	64·58	74·71
Read only	15·65	8·32	4·23
Cannot read	26·91	27·10	21·06
The State—			
Read and write	61·61	67·04	76·20
Read only	14·72	8·30	4·16
Cannot read	23·67	24·66	19·64

The variation of the results is considerable accordingly as the group approaches the termination of the School Period, those at the later stage showing, of course, much higher results. This is best

illustrated by selecting six typical groups—3–15, 5–14, 5–15, 6–15, local school age, 7–14, and group 10–15, as revealed by the last Census Returns, 1901; thus:—

Proportion per 100 living at each Age Period.

	Read and Write.	Read only.	Cannot Read.
3–15 years—			
Males	63·12	3·77	33·11
Females	64·31	3·52	32·17
Persons	63·70	3·65	32·65
5–14 years—			
Males	73·50	4·66	21·84
Females	74·50	4·36	21·14
Persons	73·99	4·51	21·50
5–15 years—			
Males	75·65	4·32	20·03
Females	76·78	3·99	19·23
Persons	76·20	4·16	19·64
6–15 years—			
Males	82·42	4·18	13·40
Females	83·81	3·81	12·38
Persons	83·12	3·99	12·89
7–14 years, School Age—			
Males	87·90	3·69	8·41
Females	89·20	3·36	7·44
Persons	88·54	3·53	7·93
10–15 years—			
Males	95·50	1·43	3·07
Females	96·79	0·98	2·23
Persons	96·13	1·21	2·66

Education in Australasian States.

The best index of the striking progress made by the Australasian States in regard to Education is obtained by comparing the results of the Three Censuses—1881, 1891, and 1901—in respect of all ages of Five years and over, as in the following table:—

Proportion of Persons per 10,000 *of the Population* 5 *Years of Age and over who could Read and Write, Read only, and who could not Read in the seven Australasian States in the Census years* 1881, 1891, *and* 1901.

Degree of Education.	Per 10,000 Persons.		
	1881.	1891.	1901.
Seven States of Australasia—			
Read and write	8270	8804	8710
Read only	689	393	225
Cannot read	1041	803	1065
Total	10,000	10,000	10,000
Tasmania compared—			
Read and write	7523	8237	8814
Read only	946	492	251
Cannot read	1531	1271	935
Total	10,000	10,000	10,000

It will be seen from these results that while in the earlier years—1881, 1891—Tasmania was considerably behind the average of the seven Australasian States in the proportion of those who could read and write, yet in the later year—1901—the rapid progress made has placed her slightly ahead of the average of the Seven States in respect of this higher category. Thus while in 1881 there were only 7523 persons in Tasmania who could read and write out of every 10,000 people 5 years of age and over, the number in 1901 had increased to 8814; while those who could not read had, in the same period, decreased from 1531 to 935. Such marked progress during the last 20 years reflects great credit upon the existing Common School system of education in Tasmania.

Schools and School Attendance.

As in the former Census, the figures relating to children receiving instruction at the various schools or at home are not quite so satisfactory, and the same remarks apply to information relating to the number of schools and teachers. If we supplement the information so obtained by official returns relating to schools in the General Statistics of the State we obtain the following approximations:—

Schools, Teachers, and Scholars, 1901.

	No.
Schools—	
State	338
Private	215
Total	553
Teachers (State and Private)	1363
Children living 3-15 age	51,561
„ (School age) 7-14 age	30,294
Receiving Instruction—	
All ages	34,529
3-15 years	32,881
School age (7-14)	26,580
In Common Schools	31,545

From these figures we gather that throughout the 26,215 square miles of Tasmania there were established 553 Common Schools, having 31,545 scholars receiving instruction at the time of the Census—*i.e.* an average of 57 scholars to each school. The number of persons receiving instruction, whether at school or at home, is stated to be 34,529, and the number of instructors of all kinds are stated to be 1363. This provides one instructor to every 26 scholars. At the Census of 1891 we find there were 71 scholars to each school, and one instructor to every 31 pupils.

The following table gives fuller information regarding the numbers and proportions of children receiving instruction at school and at home at various age-periods between 3 and 15 years of age at the last Census, together with corresponding proportions for the previous Censuses, 1881 and 1891 :—

Children between 3 and 15 Years of Age receiving Instruction, 1901.

	Total Children living.	Receiving Instruction at							Residue.
		State Schools.	Private Schools.	Denominational Schools.	College, Grammar, or High School.	Student at University.	All Schools.	At Home.

Census 1891—									
7–14 years	100·00	49·36	21·89				71·25	9·08	19·67
Census 1881—									
7–14 years	100·00	39·05	23·40				62·45	15·91	21·64

If we examine more particularly the School-age group (7-14 years) we find that there has been a gradual improvement in the numbers actually receiving instruction as compared with the results of the two previous Censuses, all taken at a given point of time. Thus in 1881 there were as much as 21·64 per cent. of children not in actual attendance. In 1891 the actual non-attendance fell to 19·67 per cent., while at the last Census the percentage of non-attendance decreased still further to 12·26 per cent.

At first sight it might be supposed that the whole of the non-attendant residue (12·67 per cent.) had never been provided with the ordinary advantages of the common school instruction; but, as formerly pointed out by me, this supposition is altogether erroneous. It simply means that about 12·67 per cent. of all children living within the limits of the school-age were not in actual attendance at school at that particular moment of time. Directly it affords no evidence whatever of the number of children who may have attained the age of 14 years who never received an elementary school education.

The only method for ascertaining approximately the numbers who failed to receive instruction at some period within the school-age is to analyse the standard of education of those who have just completed the age terminating the school period. Thus, if we take all those who had attained their fifteenth year of age, we obtain from their standard a fair estimate of what the previous opportunities for instruction must have been. Accordingly we find that although there were only 87·74 per cent. at school-age attending upon instruction at the time of the Census the percentage of those who had completed their fifteenth year of age, who could both read and write, was as high as 96·58 per cent., and those who could read 97·33 per cent. It follows that the number of children at the close of the school period who had failed to receive any instruction within the compulsory period could not have exceeded 2·67 per cent. of the whole group. This is a fairly satisfactory result when we consider the distance which children have to travel to the nearest school in the thinly populated country districts of the State.

The following table shows more fully the proportions at the age of 15 who could read and write, contrasted with the proportional attendance at school-age, at the time of the Census, in the various electoral districts of the State. The small, densely populated centres of Cressy, Franklin, and Oatlands take up the first position, each having 100 per cent. at the age who could read and write; while the very large, thinly populated district of Cumberland, as in the former Census, takes up the lowest position with only 88·37 per cent. who could read and write.

Proportion of Children at the Age of 15 *who could Read and Write, as contrasted with proportion of Children at School Age* (7–14) *actually receiving instruction in the Census year.*

	Proportion per 100 living under Age Period.	
	15 and under 16 years age, Read and Write.	School Age, 7–14 years, receiving instruction.

SECTION IX.—RELIGIONS OF THE PEOPLE.

Religion—only indicating the denomination or class to which the individual professes to be related—was again included as a subject of enquiry in the Schedule for the Census of 1901.

At the previous Census, owing to some misapprehension, there were signs of objection on the part of a few, mainly belonging to the minor denominational bodies. The provision, however, to allow anyone to "object," introduced in the Census Acts of 1901, in Tasmania and the six sister States of Australasia, as in former Australasian Censuses, has had the effect of gradually reducing the still lingering fragment of objectors to this most useful and interesting statistics.

The following references tend to show that any serious objection to state the religious denomination to which each person belongs (if any) is almost as extinct as the older superstitious opposition to taking a "census" of any kind :—

Proportion of Persons who "Object" to state the Religious Denomination to which they belong in Different Countries and at Different Times, where the Optional Clause has been introduced.

Percentage of Those who Object.

Country.	Census Year.	Percentage Objectors.
Ireland	1881	0·01
Victoria	1861	2·14
"	1871	1·36
"	1881	1·00
"	1891	1·19
"	1901	0·90
New South Wales	1891	1·00
"	1901	0·96
Queensland	1891	0·67
"	1901	0·95
New Zealand	1881	2·85
"	1891	2·45
"	1896	2·27
"	1901	2·37
South Australia	1901	2·07
Tasmania	1891	3·17
"	1901	1·72
Western Australia	1901	1·66
Commonwealth	1901	1·12

These figures show, where the optional clause to write "Object" is introduced in the answers to Census queries, that even the numbers who avail themselves of it are now very few indeed. The following observations of the eminent statistician, Dr. Longstaff (Studies in Statistics, pp. 211-12), indicate the modern tendencies of thought upon this important matter :—

"A religious census is taken in most foreign countries : it is taken in Ireland, and in most of our colonies and possessions. The principal exceptions are Great Britain, France, and Italy, and the United States. Before the unification of Italy a religious census was taken in Sardinia. The proposal to ask people in England their religious profession, a proposal that has been recommended by this Society (Royal Statistical Society) in 1840, 1860, 1870, and 1880, has always excited an amount of feeling which I confess I find it difficult to understand. . . . Many persons of all sorts of opinions say that a man's religious opinions are his own affair, and that no one has a right to inquire into them. This last objection is, I think, largely founded on the misconception that the object of the census is inquiry into individuals, whereas inquiry is made of individuals solely with a view to obtain results as to aggregates. . . . I fully admit that the returns obtained would not be absolutely correct ; nevertheless, I cannot but think that the results of successive censuses would be most valuable for comparisons, and that most interesting tendencies to increase or decrease in one direction or another would be brought to light."

In the following table a detailed account is given showing that out of a total population of 172,475 persons particulars as to the religious denomination were ascertained in respect of 169,095

persons, or 98 per cent. The unspecified numbered 3380 persons, or only 2 per cent. of the whole population. Of the latter there were 2900, or 1·72 per cent., who objected to disclose the name, if any, of the denomination to which they belonged, and there were 480, or 0·28 per cent., who failed to give any particulars. The main feature of this table may be conveniently summarised in the following way :—

Approximate Proportions Relative to the Whole Population.

Baptists	3285	2·32	4716	2·78	1431	4·35
Salvation Army	1216	0·86	1454	0·86	238	19·57
Society of Friends	176	0·12	179	0·11	3	1·70
Other Christian Sects	4694	3·33	5107	3·02	413	8·79
Jews	84	0·06	107	0 06	23	27·38
Mahomedans, Buddhists, and other Non-Christian Sects	1001	0·71	452	0·26	— 549	— 54·84
Others	661	0·46	926	0·54	265	4·00
Total specified	141,493	100·00	169,095	100·00	27,602	19·51

The above table shows that the proportion and relative importance of the different denominations have not materially altered from the position taken up by the same bodies in the previous Census. Among the Christian denominations the largest relative increases since 1891 have been in the following order :—

1. Methodists..... 1·45 fold.
2. Independents ..... 1·23 „
3. Salvation Army ..... 1·19 „
4. Presbyterians ..... 1·18 „
5. Church of Rome ..... 1·17 „
6. Church of England..... 1·14 „
7. General increase all bodies ..... 1·19 „

The only denominations showing a positive decrease are the Non-Christian Sects and Mahomedans, which have diminished by 549, or 54·84 per cent.

Religion and Education.

The following table shows the degree of education possessed by the principal religious groups or denominations, in the order of the lower percentage, as regards the proportion at and above 15 years of age who were "unable to read" :—

Per 100 *living.*

	Read and Write.	Read only.	Cannot Read.
Christian Denominations.			
1. Christian Brethren	96·81	1·69	1·50

2. Buddhists and Confucians	87·04	1·23	11·73
Residue undefined	91·76	1·33	6·91

SECTION X.—SICKNESS AND INFIRMITY.

At the Conference of Statisticians, held in Sydney, it was considered desirable to confine inquiries as to Sickness and Infirmity to four distinct categories, viz. :—

1. Persons unable at the time to follow usual occupation by reason of *Sickness.*
2. Persons unable at the time to follow usual occupation by reason of *Accident.*
3. Deaf and Dumb.
4. Blind.

The reason for this restriction of the number of specific inquiries made in previous Censuses is, that by extending the inquiry into such infirmities as idiotcy, epilepsy, insanity, loss of a limb, etc , there are a large number of persons who, from wounded sensibilities, would either refuse or refrain from answering them, and in consequence would be too imperfect in these respects to be of any statistical value. Notwithstanding this restriction to the inquiries made, a large number of heads of families or establishments furnished particulars of other classes of infirmities ; but, though the more important of these are tabulated in the more extended tables, they are not deemed to be of sufficient value to introduce for the purposes of comparison in this report.

At the last Census (1901) the number of persons stated to be sick, suffering from accident, deaf and dumb, and blind was 1652, which scarcely represents 1 per cent. of the total population, viz., 0·96 per cent. Of the 1127 sick persons there were 618 males and 509 females.

Of those suffering from accident—277 persons—there were 238 males and 39 females.

Of the 75 persons returned as deaf and dumb there were 41 males and 34 females.

Of the 173 persons stated to be blind there were 97 males and 76 females.

In the following summary the results of the Censuses of the years 1891 and 1901 are contrasted :—

Sickness and Infirmity.	1901.		1891.	
	Persons. No.	Per cent. to Total Population.	Persons. No.	Per cent. to Total Population.
Sickness	1127	0·65	1169	0·80
Accident	277	0·16	152	0·10
Deaf and Dumb	75	0·04	54	0·04
Blind	173	0·10	165	0·11
TOTAL	1652	0·95	1540	1·05

Upon the whole the proportion of sickness and infirmity at the time of the last Census is shown to be 0·10 per cent. less than at the time of the Census of 1891.

The male bread-winners being more exposed to risk of accident, from the nature of their occupations, invariably represent a larger relative proportion suffering from sickness and infirmity than females. In 1901 the number of cases among males was 924, or 1·11 per cent. ; among females the number of cases was 658, or only 0·79 per cent of the total female population.

The four classes of infirmities for which particulars were sought, fall, naturally, into two very distinct divisions—(1) those causing disablement to follow usual occupation by reason of sickness or accident. The greater number of persons so disabled, however, are expected to recover sooner or later, and the group is thus distinguished from : (2) that group of infirmities—deaf and dumb and blind—embracing those of a more or less permanent character.

Proportion of Persons Disabled from Sickness at each Age-Period.

The proportion of persons disabled from sickness and accident increases with age in a degree almost approaching to geometrical progression. Thus the proportion of males and females, per 10,000 living, disabled from both causes, at the last Census, increased at each successive age-period in the following ratio :—

Age Period.	Per 10,000 Living.	
	Males.	Females.
Under 20 years	21·25	17·01
20 to 40 „	79·73	51·40
40 to 55 „	115·80	80·49
55 to 70 „	293·02	200·73
70 and over	1015·98	849·04

The variability in the proportions of males and females disabled from sickness and accident at each age-period is more fully disclosed in the following table :—

Sickness and Accident at each Age.—(Census 1901.)

Ages.	Number per 10,000 Living at each Age-Group, Disabled from :—					
	Sickness.		Accident.		Both.	
	Males.	Females.	Males.	Females.	Males.	Females.

80 to 85 „	1198·34	960·00	65·38	...	1263·72	960·00
85 and over	1557·76	1972·50	150·75	68·15	1708·51	2040·65

From the preceding table it would appear that up to the age of 45 the proportion of those disabled from sickness was greater among females than males; the reverse being the case for nearly all the quinquennial age-periods (exception, 75 to 80 years) from 45-50. As might be expected the liability to disablement from accidental injury is much greater for males than females, the proportion for all ages being 26·56 per 10,000 living for males, and only 4·71 per 10,000 living for females. Although the proportion of persons so disabled increases with age, the ratio is much smaller for accidental injury than for sickness. It is probable also that in the older age-groups those stated as disabled from accident may have their proportions greatly augmented from causes occurring at the earlier ages, especially as regards males, who are more exposed to injury from accident in the earlier years from the nature of their sports and occupations.

Number of Days of Sickness and Accident Disablement for Men Yearly.

To Friendly Societies and their individual members it is of the greatest importance to obtain accurate information as to the probable number of days in each year in which men are disabled from following their usual occupations, and how far are their Sick Funds affected by the heavier demands made upon them as we proceed from the younger to the older lives. The experience of our Friendly Societies in Tasmania for the years 1891 and 1901 respectively was as follows:—

Sick Pay.—Average number of days Disabled in each year in respect of which each member received Sick Pay.

1891..... 6·89 days per member per year.
1901..... 7·48 „ „ „

If we assume that the number of men disabled from work by reason of sickness and accident on Census day was a fair index of the proportions similarly disabled throughout the year, the following figures, for men at all ages 20 and over, would show the aggregate number of days' disablement per man per year :—

1891..... 5·58 days disabled per man per year.
1901..... 5·88 „ „ „ „

These results, however, are considerably lower than the actual experience of our local Friendly Societies. It is possible that the great difference between the Census results and the experience of Friendly Societies may be accounted for in part by one or all of the following considerations:—

1. That at the time of the year in which the Census was taken there was a greater average freedom from sickness than the average of the whole year.
2. That, in cases of the less serious forms of sickness, there is reason to expect that there would be a greater tendency on the part of members of Friendly Societies to place themselves upon the sick list than it would be on the part of the great body of bread-winners who were not so fortunately provided for in cases of temporary disablement.
3. That the information relating to disablement from sickness or accident may possibly be less complete than in the returns furnished in respect of members of Friendly Societies, as failure to give complete information on the part of the person filling up the Census schedule is not attended with the personal disadvantages as would occur to a disabled member of a friendly society who failed to report his case in the proper quarter.

This is the general experience at other times and in other countries as regards the information relating to disablement from sickness and accident obtained by the Census collector, and, therefore, so far as the Actuary of Friendly Societies is concerned, the Census results would not of themselves be a safe guide to him in framing his provisions for meeting the demands for sick pay for the various age-groups of the normal form of friendly society.

Notwithstanding this the information obtained by way of Census may fairly be relied upon as being relatively true as compared with information similarily obtained at other times and in other countries.

The following table shows for the Census years 1891 and 1901 the estimated number of days lost by men during the year according to age:—

SICKNESS AND ACCIDENT—MALES, YEARS 1891–1901.

* Based upon the assumption that the same proportion as on Census day characterised all other days throughout the year.

† This average closely corresponds with the average number of days' sickness for which Sick Pay is provided by the various Friendly Societies in Tasmania.

It will be observed that the results of the two Census years differ considerably in the details of ages. Up to the age of 40 the year 1901 contrasts favourably with 1891; the reverse being the case for the most part for ages over 40. Upon the whole, however, the mean loss of days per man per year for men at ages 20 and over does not present any material difference. The mean of both years show a smaller loss per man than the average loss experienced by local Friendly Societies for the same years by as much as 20 per cent.

Comparative yearly disablement from Sickness for Men in different countries.

The average number of days' sickness for men in different countries, as ascertained by the labours of eminent actuaries, is also of the greatest interest, as throwing light upon all matters affecting the general health of the people.

It is reasonable to expect that there should be wide differences in the experience of different countries in respect of the disablement, yearly, of men from sickness arising from the great difference of the conditions of local environment, among which the following are the most important factors :—

Differences as regards—

1. Climate.
2. Comparative density of population.
3. Stage of development—(*a*) pastoral stage; (*b*) agricultural stage; (*c*) manufacturing stage.
4. The more or less effective administration of the law relating to factories, and in respect of all sanitary matters.
5. The comparative healthiness of the prevailing occupations of the people.

These important considerations should be borne in mind when comparing the wide differences in the sickness experience for the different countries as contrasted in the following table :—

Average number of Days of Sickness yearly for Men in different Countries.

Sickness and Accident in Relation to Occupations.

The number of persons disabled from sickness and accident belonging to each class of bread-winners and to each division of dependants is shown in the following table :—

Table showing the number of cases of Sickness and Accident at the time of the Census (1901) *in relation to the principal classes of Occupation.*

Occupations.		Cases of Sickness and Accident (All Ages).	
Class.	Persons.	No.	Equivalent Number of Days Sickness and Suffering from Accident per head per year for each Class.*
			Days.
All Classes	172,475	1404	3·49
Bread-winners—			
Professional	4997	35	2·56
Domestic	7937	43	1·98‡
Commercial	7497	59	2·87
Transport	4848	44	3·31
Industrial	18,750	247	4·81
Agricultural, Pastoral, and other Primary Producers	27,899	347	4·54
Indefinite	1566	61	14·22†
Total Bread-winners	73,494	836	4·15
Dependants—			
Wives and Daughters engaged in Domestic Duties	33,541	200	2·18
Children and Relatives	63,863	325	1·86
Inmates of Public Institutions	1577	43	9·95†
Total Dependants	98,981	568	2·09‡

* Based upon the assumption that the proportions on Census day characterise all other days throughout the year.
† The higher rate is mainly due to the larger proportion of elderly persons in this group.
‡ The lower rate in this class is mainly due to the large proportion of youthful persons contained therein.

From the preceding table it is observed that out of the 1404 persons disabled from sickness and accident 836, or 59·54 per cent., were bread-winners, and 568, or 40·46 per cent., were dependants. Relative to the numbers in each class and division, the number of lost days per year is estimated to be 4·15 days per bread-winner and 2·09 days per dependant; that is, the disablement for bread-winners on the average is double that of dependant wives, children, and others. The highest rate—14·22 days—however, occurs in the class "Indefinite"; but this arises from the greater average age of the retired persons of independent means who form the larger number of this particular group. The increase of sickness with age also explains the higher rate among inmates of public institutions, where persons of extreme old age predominate.

Deaf and Dumb Persons.

The number of persons returned as deaf and dumb at the last Census is stated to be 75, or 4·35 for every 10,000 of the total population. Of these, 41 were males and 34 females. Although the proportion of persons returned as deaf and dumb is slightly greater than at the time of the previous Census, it compares favourably with other countries, as shown in the following table :—

Deaf Mutes in various Countries per 100,000 *Persons.*

	No.
Tasmania, 1901	43
„ 1891	37
South Australia	97
New Zealand	24
England	49
Scotland	59
Ireland	69
Mean of principal European Countries (Mulhall)	85

Blind Persons.

The number of person recorded as blind at the last Census is 173, of whom there were 97 males and 76 females. The rate of 10·03 per 10,000 persons is above the average of the United Kingdom and Australasia, although, according to Mulhall, it is below the average of the principal European countries.

Blindness, for the most part, however, is rather a condition of age; and unless allowance be made for the great differences in the proportions of persons living at the principal age-groups in different countries, and especially for ages 65 and over, comparisons would be altogether misleading. This remarkable increase of blindness with increase of age is well illustrated in the following comparative table:—

Proportion of Blind Persons at Three important Age-Groups, and for all Ages in different Countries.

(Per Million Persons).

	All Ages.	Age-Groups.			
	Under 65 years.*	Under 5 years.	5-65.	65 & over.	All Ages.
New Zealand	352	35	405	5896	586
South Australia	499	75	569	9172	869
Tasmania	508	96	574	12,516	1003
Victoria	589	121	667	8794	872
Scotland	488	7	570	6041	727
Ireland	561	23	651	6373	954

* Corrected for differences in the proportions of persons living at different age-groups.

The principal reason why Tasmania compares so unfavourably with other countries as regards the proportion of blind persons in relation to the total population, is due to the fact that she has an abnormally large proportion of persons living at an extreme old age. The influence of extreme old age as affecting the proportion of persons returned as blind is very strikingly illustrated in the preceding table: Tasmania taking up the 3rd position for all ages under 65, while for all ages she takes up the last, or 6th.

SECTION XI.—OCCUPATIONS OF THE PEOPLE.

In my report of the Census of 1891 I have stated that perhaps there is no subject of such vital importance at the present day as that which concerns itself with the organisation of Industry, as revealed by the figures relating to the Occupations of the People: few take into consideration that there are natural laws in operation which as surely determine the numbers required in any country for particular kinds of employment as do the laws which locally determine the periods and relative heights of the diurnal tides, kinds of service or occupations, and the numbers of hands therein within a complete circle of interchange, and which are strictly determined by the average common wants. The wants which demand the greater expenditure of human energy must absorb the greater proportion of persons requiring employment, without regard to capacities, attainments, or personal desires; and so far as the mass of human beings are concerned there is, broadly speaking, no choice.

The great wants—food, clothing, and shelter—are by far the greater factors in the determination of the aggregate numbers that must be employed in particular classes of occupations if the wants are to be reasonably satisfied; the same three great wants also determine the necessary amount and proportions of capital, machinery, and land, together with the numbers and proportions of labourers for each kind of occupation, which, directly or indirectly, is utilised in the satisfaction of the said three great wants.

The numbers at present absorbed in creating luxurious satisfactions, although important numerically, are insignificant in comparison with the numbers absolutely required to supply the minimum of the great wants—food, clothing, and shelter; and hence it follows that no social advancement by means of the higher education of the people can do more than ameliorate existing conditions. It cannot alter the relative numbers engaged in the various branches, excepting those cases where improved producing agencies, such as steam, electricity, and other mechanical aids, are substituted for manual labour in the more toilsome occupations, thus liberating or rendering available a larger proportion of human labour for increasing the general supply of the more luxurious satisfactions now confined to the few, or for curtailing the long hours of toilsome labour at present necessary to produce in sufficiency the common necessaries of life. It is not absolutely necessary, however, that the great classes of occupations of any one place or country, say agricultural and industrial occupations, should preserve the world's strict average proportions to each other, so far as the particular place or country is concerned, so long as they are free to make necessary exchanges with other places or countries which supply the complement of the full circle of necessary wants, or for disposing or making good local surpluses and deficiencies. Nevertheless, a country confined to the production of its own satisfaction, or what is the same, the world as a whole, must preserve the strict average proportion and quantity of labour and auxiliary aids in the production of satisfactions for the three great wants—food, clothing, and shelter—which are the mainsprings of all human activities.

The local conditions of the particular place, however, determine to a great extent the proportions of the several classes of industry. Manufactures, not so much affected by limit of space, are most economically produced within a small area, as in towns and populous centres, where the transfer of partly completed products and of labour from one branch to another can be effected with the least expenditure of time and labour, thus lessening the disadvantageous effects of distance between the producer and consumer. It is clear, therefore, that within each great circle of exchange the conditions of the locality, such as climate, soil, minerals, area of land more or less suitable for different forms of industry, determine for each place the proportions of persons that may be locally employed in different classes of occupation; and these proportions in any one place are sufficiently steady to enable us to gauge to what extent particular industries may be increased without producing that state of congestion of the particular field of labour, which, from such considerations, may as readily be induced in a thinly populated colony as in a crowded centre of population. It is clear, therefore, if the occupations of large bodies of immigrants into a colony do not correspond to the standard of the local proportion of the division of labour, difficulties are sure to arise in the local labour market, not because in such thinly populated lands there is no room for more hands, but because the *direction* in which the applicants have been trained, or in which they desire to be employed, is out of harmony with the natural or local proportions of those branches of industry which experience has shown can alone be carried on with success. These observations equally apply to the training of the young within the State in harmony with the direction and proportion in which their services in the future can be utilised. The different proportions of the various divisions of labour which different places or countries can maintain, is sufficiently indicated by showing what are the average differences in the composition of the bread-winners of a community accordingly as we take an Urban or Rural District of a State like Tasmania, or an average of a

populous manufacturing country like the United Kingdom. Thus, among 100 Bread-winners, the following shows the average proportion of the great divisions of labour in England, New Zealand, and Tasmania, and also the average composition of a typical Rural and Urban District in the latter State. The world's average, embracing a complete circle of exchange, is placed alongside for comparison.

Average percentage Proportion of different Classes of Bread-winners.

The importance of such considerations sufficiently justifies all means taken to acquire accurate knowledge concerning the local laws which determine the allocation of the workers of the people to the different classes of employment, and such considerations also demand that all information so obtained should be based upon the most perfect form of classification, so that all the important relationships may be truly determined.

CLASSIFICATION OF OCCUPATIONS.

With slight modifications the Conference of Statisticians at Sydney in March, 1900, determined to adopt the systematic form of classification of occupations drawn up for the Census of 1891 in the various colonies of Australasia, and since recognised by Statisticians as "The Australian Method," and, therefore, it was according to this system that the occupations of the people of the Australasian Colonies were tabulated at the recent Census.

Prior to the Australasian Census of 1891 the Statisticians in these colonies generally followed the example of England in its classification of occupations; but the English method, originally devised by the late Dr. Farr (Deputy Registrar-General of England), although of considerable value, had many serious defects. Dr. Farr in his method of classification endeavoured to frame the groups or combinations as far as possible according to the *materials* on which people worked. So far as minor groups and combinations are concerned the method was fairly successful, but as regards the principal divisions of occupations it could not form a safe guiding principle, for it is obvious that all classes of workers must often be related to the self-same materials, and separation into the principal classes of occupations could not possibly be successfully based upon this method. It is not surprising, therefore, that Dr. Farr's classification should present many defects and anomalies. For example, Class II. (Domestic) and Class VI. (Indefinite and Non-productive) confusedly mixed up the grand broad economic distinctions which should keep separate Bread-winners and Dependants. Similarly Primary Producers, Distributors, and Manufacturers were indifferently mixed together under three very distinct classes, viz., Commercial (Class III.), Agricultural and Pastoral (Class IV.), and Industrial (Class V.). It is obvious, therefore, that the lack of any clearly defined principle for determining the limits of the great naturally distinct classes, themselves, led the original classifier into great perplexities; for we find Fishermen, Veterinary Surgeon, and Farrier grouped under the Pastoral and Agricultural Class; Chimney-sweep grouped with workers in Coal; and the Miner, Quarryman, and other Primary Producers are classed together with a moiety of the Dealers, along with Nightsoil-men, Artisans, and Manufacturers.

The whole of the members of the Australasian Conference of Statisticians of 1890 were so thoroughly impressed with the defects of this older system of classification of occupations that they resolved to draw up an amended scheme of classification, in which the distinctions, which naturally separated the principal groups of Bread-winners and Dependants, would be more clearly defined. A Sub-committee, consisting of my distinguished friend Mr. T. A. Coghlan, Government Statistician of New South Wales, and the author, was accordingly appointed to draw up such a scheme of classification of occupations, systematised into classes, orders and sub-orders. The scheme drawn up by the Sub-committee referred to and embodying certain principles already agreed upon, with slight amendments, eventually received the unanimous approval of the members of the Conference, and it was according to this new system of classification that the people of the Australasian Colonies were tabulated at the Census of 1891, and, with very slight modification in some of the groupings, it was again adopted throughout the Australasian Colonies at the recent Census of 1901.

The amended classification is divided into eight principal classes. The first seven embrace all independent *Bread-winners*; and the eighth, or last class, embraces all *Dependants*. The three important classes related to *Materials* are kept separate by regard to the relationship which their *differing services* bear to the materials which pass through their hands. Thus, Primary Producers of Raw Materials directly acquired by labour from natural sources bring naturally into one class (Class VI.) those engaged in Agriculture, Grazing, Fishing, Hunting, Forestry, and Mining. Transporters, Dealers, or Distributors, who effect no material change in Producers' materials, come naturally together in Classes III. and IV.; while all skilled and unskilled modifiers or constructors of materials, in a similiar way, come naturally together in Class Industrial (Class V.).

The Domestic Class (Class II.) no longer includes wives and others engaged at home in domestic duties for which no remuneration is paid, nor dependent relatives or children.

The Professional Class (Class I.) only includes those ministering to Religion, Charity, Education, Art, Science, and Amusement, and those connected with the General and Local Government, and in Defence, Law, and Protection. All persons employed by the General and Local Government, whose occupations are properly related to Producing, Commercial, and Industrial Groups, are classed with the latter, as it is obvious the main value of such classification is to ascertain *how employed*, and not *by whom employed*. The exact extent of the Government Service can be easily obtained by reference to the Civil List, and by direct reference to Local Governmental Centres throughout the country.

Additional information regarding *Ages* of Persons employed, and also as regards *Grade*, (whether employer, employed on own account, relative assisting without receiving an express remuneration for services, wage-earners), was also provided for, as such information, lacking in former Censuses, was of the greatest value. Information regarding the numbers unemployed during the week preceding the Census was also obtained at the same time.

The following Summary and Table convey a comprehensive idea of the principles and plan of the improved mode of classification of occupations as drawn up and finally adopted by the Conference at Sydney in the year 1900.

Table defining the Principles of the Method adopted in the Classification of Occupations, in accordance with the uniform Scheme agreed upon by the Conference of Statists held in Sydney in February and March, 1900; and showing the number of Persons, Males, and Females employed or belonging to the principal Groups of Business, Calling, or Service, or belonging to the Principal Divisions of Dependants, arranged systematically under Classes, Sub-Classes, Orders, Sub-Orders, and Sub-Groups.

CLASSIFICATION OF OCCUPATIONS, 1901.—DEFINITION OF PRINCIPAL CLASSES.

Class.

Section A.—Bread-winners.

I. PROFESSIONAL—Embracing all persons, not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the intellectual, moral, and social wants of its inhabitants.

II. DOMESTIC.—Embracing all persons engaged in the supply of board and lodging and in rendering personal services for which remuneration is usually paid.

III. COMMERCIAL.—Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

IV. TRANSPORT AND COMMUNICATION.—Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

V. INDUSTRIAL.—Embracing all persons not otherwise classed, who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding as far as possible all who are mainly or solely engaged in the service of commercial interchange.

VI. AGRICULTURAL, PASTORAL, MINERAL, AND OTHER PRIMARY PRODUCERS.—Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

VII. INDEFINITE.—Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

Section B.—Dependants: Non-Bread-winners.

VIII. DEPENDANTS.—Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others not otherwise engaged in pursuits for which remuneration is paid; and all persons depending upon private charity, or whose support is a burthen on the public revenue.

Systematic Tabulation of Occupations under Classes Orders and Sub-Orders.*

CLASS I.—PROFESSIONAL.

Occupations.	Classification.			Total.	Males.	Females.
	Order.	Sub-Order.	Group.			
Order 1.—Persons engaged in Government, Defence, Law, and Protection, not otherwise classed. Sub-order 1.—General Government.						
The Governor	1	1	1	...	...	...
Officer of Government Department (exclusive of Officers specially classified)	...	...	2	296	287	9
Others (including persons holding Ministerial or Political Office whose occupation is not stated)	...	...	3	1	1	...

* NOTE.—The main object of this table is to ascertain as closely as possible the total number of hands actually employed in each specified Business, Calling, or Industry indicated by a distinct number; and hence the totals of latter embrace not only those persons whose calling particularly distinguishes the form of business, but also persons of all other subordinate occupations, not otherwise specified within the same Sub-order, who receive remuneration for assistance in the conduct of the particular Business or Calling.

The actual number of persons belonging to each distinctive Occupation, *irrespective of the nature of the general Business or establishment in which they are employed*, may be ascertained from the Classification of Occupations, arranged according to alphabetical order in Table XXI. These alphabetical tables also serve as indices to the specific Occupations grouped under this le and all other General Classification Tables.

Breadwinners.

Occupations of Breadwinners, however, are the main consideration from an economic point of view, and therefore it is of advantage to consider this group by itself, as shown in the following table, where the percentage proportion of each class and principal sub-class is given relative to total Breadwinners:—

BREADWINNERS—NUMBERS AND PROPORTIONS—CLASSES AND SUB-CLASSES, 1901.

Table showing, in respect of the Total of all Classes and of Breadwinners, the Numbers and Proportions per cent. of Persons, Males and Females, belonging to the different Divisions, Classes, and Sub-Classes of Occupations, according to the new classification adopted in Census of 1901.

Relative Importance of the Principal Classes of Breadwinners in Tasmania during Census Years 1891 *and* 1901.

The following summaries indicate for the Census years 1891 and 1901 the relative importance of the principal classes of Breadwinners in Tasmania, proceeding in the order of numerical importance in the year 1901, for Persons, Males, and Females, thus :—

Persons.

Class.	1901. Per cent.	1891. Per cent.
1. Primary Producers—		
Agricultural and Pastoral	28·98	30·10
Mineral	7·44	6·49
Other	1·53	1·79
	37·95	38·38
2. Industrial (Modifiers)	25·53	26·08
3. Commercial and Transport (Distributors)—		
Property and Finance	1·87	2·51
Trade	8·43	7·59
Transport	6·59	5·32
	16·89	15·62
4. Domestic Services	10·80	11·69
5. Professional Services	6·80	6·38
6. Indefinite	2·13	1·85
All Breadwinners	100·00	100·00

Males.

1. Primary Producers—		
Agricultural and Pastoral	32·76	34·05
Mineral	9·49	8·16
Other	1·42	2·20
	43·67	44·41
2. Industrial (Modifiers)	28·62	29·07
3. Commercial and Transport (Distributors)—		
Property and Finance	1·75	2·35
Trade	8·86	8·26
Transport	7·85	6·26
	18·46	16·47
4. Professional Services	5·32	5 56
5. Domestic Services	2·54	2·93
6. Indefinite	0·91	1·16
All male Breadwinners	100·00	100·00

Females.

Class	1901. Per cent.	1891. Per cent.
1. Domestic Services	40·61	45·73
2. Primary Producers—		
Agricultural and Pastoral	15·32	14·74
Mineral	..	..
Other	0·14	0·22
	15·46	14·96
3. Industrial (Modifiers)	14·30	14·49
4. Professional Services	12·23	9·56
5. Commercial and Transport—		
Property and Finance	2·30	4·09
Trade	6·77	4·96
Transport	2·07	1·67
	11·14	10·74
6. Indefinite	6·53	4·52
All female Breadwinners	100·00	100·00

It is important to observe the great distinction between the proportions of male and female workers. The normal relationship of the division of services in Tasmania at present demands that out of every 100 male Breadwinners 44 must devote themselves to the primary industries (Agricultural, Pastoral, Mining, &c.); 29 to Industrial pursuits, 18 to Commercial and Transport services, and 9 to all other occupations.

Out of every 100 female Breadwinners 41 must devote themselves to Personal and Domestic Services, 15 to Agricultural and Pastoral Pursuits, 14 to Industrial Pursuits, 12 to Professional Services, 11 to Commercial and Transport Services, and 7 to all other occupations.

So far as countries at the agricultural and pastoral stage of development are concerned it would seem that the numbers engaged in the Primary Industries determine very rigidly the number of persons that may be employed with advantage in any other form of occupation. At this stage, therefore, the latter may well be termed the Dependant Occupations, and their relative proportions cannot suffer much disturbance without producing disastrous results in some branches of industry. It would appear also that these proportions are independent of such considerations as the general sparseness or density of the population, and therefore it is evident that fresh accessions of workers, whether from within (the local rising generation), or from without (immigrants), must be prepared to seek employment in directions harmonising with the local natural conditions which determine the proportional numbers of the great divisions of services, and which have already been referred to in the introductory remarks regarding Occupations of the People.

Broadly speaking, therefore, it would appear that the local conditions at the present time are such that, for every 10,000 persons employed as Breadwinners there must be 3795 of them engaged in one or other of the Primary Industries. In other words every 1000 persons engaged directly in the Primary Industries of the State makes it possible for 1634 persons, or thereabout, to find room for employment in some other useful occupation; and that for every 1000 persons placed as Breadwinners on the land there can be economically supported 6182 souls.

Although these figures depict the general law for the colony, as a whole the proportions in Rural and Urban districts vary with the dominant industries of the place, the former approximating to the proportions obtaining in large centres of population, like England and Scotland, where manufacturing industries dominate, the latter approximating to the world's average, in which agricultural and pastoral industries dominate, and absorb on the average nearly the half of all available kinds of labour.

The following table shows the varying proportions of each of the principal classes of breadwinners in the Urban and Rural Districts of Tasmania, with which are given for purposes of comparison corresponding proportions relating to other countries at similar and differing stages of development:—

OCCUPATIONS OF THE PEOPLE—DISTRIBUTION BY ELECTORAL DISTRICTS—BREADWINNERS, CENTESIMAL PROPORTION, 1901.

Table showing the Percentage Proportion of Breadwinners (Persons) living in the State, in Urban Districts, in Rural Districts, as a whole, and in each Electoral District, distinguishing the various Classes and principal Sub-Classes.

Districts.	Breadwinners (Persons). All Breadwinners.	Class I. Professional.	Class II. Domestic.	Class III. Commercial.	Class IV. Transport and Communicati'n.	Class V. Industrial. Estimated average of 15 great countries*		3·0	6·8	5·2	...	30·1	52·50	52·50				2 4

* Based upon results obtained from 15 great countries, forming a fairly close approach to a complete circuit of commercial exchange, and embracing a population of over 433 millions.

The proportions of the various classes of Industry differ very widely with each place and country, but in a complete circle of exchange it is estimated that nearly half of all Breadwinners must be occupied in the production of primary materials or raw products from the land. Wherever the primary producers are much below the world's average, it indicates that the local supply of some of the necessary raw products is deficient, and must be made good mainly by exchange of local manufactured products, as in the case of England, or as in the exchanges between urban and rural districts generally.

OCCUPATIONS.—1891, 1901.—NUMBERS AND PROPORTIONS COMPARED.

Table showing the Number of Persons living in the State at the last two Censuses, belonging to the principal divisions of Occupations, according to the new classification adopted in the Census of 1901; *also showing the proportion per cent. of each Division, Class, and Group in relation to all Classes and to Breadwinners respectively; and in respect of the Census of* 1901, *showing absolutely and relatively the Increase or Decrease since previous Census.*

Total Dependants	85,256	98,981	58·13	57·39	13,725	16·09

From the above table it would appear that the general order of relative importance, both of classes and sub-classes, have undergone very little change since the previous Census was taken.

Occupations related to the Land.

The occupations related to the primary industries engaged upon the land, from their importance, invite our special attention; and it is satisfactory to note that the largest absolute increase among the Breadwinners, viz., 4331, or 18·38 per cent. above the numbers of the previous Census, occurs in this division. It is still more satisfactory that the principal industry of the State, so far at least as the employment of labour is concerned (Agriculture), has increased in numbers beyond that of any other group or sub-division. The workers in this important industry have increased by 3391, or 21·15 per cent., during the decade.

The actual increase in the number of hands however does not adequately indicate the progress made during the decade, so far as Agriculture is concerned. Important economic conditions in farming operations throughout the civilised world are converting the old-fashioned hand-labourer on the farm, day by day, into an expert, skilled in the use of all kinds of labour-saving agricultural machinery. This important change, during the last twenty years, is gradually reducing the number of farm hands required to cultivate, say, each '00 acres under crop, while at the same time effecting a larger yield of products, both absolutely and relatively.

This is made evident by comparing the acreage under crop, the value of products, and the number of hands employed in Agriculture in the last three Census years in Tasmania, as in the following summary :—

	1881.	1891.	1901.	Increase or Decrease in 20 years.	
				Increase per cent.	Decrease per cent.
Acres in crop ..... acres	148,494	168,121	232,550	56·6	...
Produce—value..... £	837,043	1,258,307	1,561,288	86·5	...
Hands employed ..... No.	17,699	16,031	19,422	11·0	...
Hands per 100 acres in crop ..... No.	11·29	9·53	8·35	...	29·9
Produce per Hand .... £	47·29	78·49	80·40	70·0	...

By this striking comparison it is shown that within the period of twenty years, although the number of hands required to cultivate each 100 acres in crop has been reduced from 11·92 to 8·35, or nearly 30 per cent., the absolute value of products has increased by 86 per cent., and the value of products per hand, owing to the improved methods of cultivation, has actually increased by £33 per hand, or 70 per cent.

It has thus been made manifest that the wonderful improvement in labour-saving machinery, which has so largely come into use during the last twenty years, enables the farmer to till the land more effectively than formerly, with fewer hands.

It is true that the progress of Agriculture in later years is not so rapid, relatively, as it was formerly, both in Australia and Tasmania. One of the most potent causes which has operated in retarding agricultural progress in Australasia is that the land already under crop more than suffices for the Australasian market, and the expansion of the surplus designed for the distant market of the United Kingdom is checked by the gradually falling prices in that market, which is open to the keen competition of the closer and greater producing centres of America and Russia, not to mention the produce of India, created by a class of agriculturists whose low standard of living or wages enables them to undersell the Australasian producer, crippled as he is, not merely by the immense obstacle of distance, but also by the much higher standard of living fortunately enjoyed by the labourer in these States.

Grades of Occupations.

In the last Census schedule a column was again inserted, as in 1891, for the purpose of ascertaining the grades of all workers, such as employer, engaged on own account, and wage-earner. Further particulars of the latter were also obtained, separately distinguishing the number employed during the week preceding Census day, and the number of relatives assisting employer in business or work whose services were not necessarily rewarded in expressly stated wages.

The following is a summary of the information so obtained in respect of all Breadwinners as heretofore defined :—

Grades of Breadwinners in Tasmania, 1901.

		No.	Per cent. to Total specified.
Employers		6667	9·08
Engaged on own account		12,178	16·89
Wage-earners—			
Ordinary at work	46,249		62·99
Ditto unemployed	2165		2·95
Relatives assisting employer in his business	6160		8·39
Total wage-earners		54,574	74·33
Total specified		73,419	100·00
Unspecified		75	

Employers.

The classes in which the Employers showed the largest proportion was that devoted to Pastoral pursuits, the lowest proportion was among Mineral producers. The following shows the order of the classes and sub-classes in relation to the percentage proportion of employers, beginning with the highest :—

Percentage Proportion of Employers to Breadwinners in each Class.

	Per cent.
1. Pastoral Producers	17·32
2. Agricultural Producers	15·69
3. Trade	14·95
4. Property and Finance	11·36
5. Other Primary Producers	6·84
6. Industrial	6·05
7. Professional	4·52
8. Transport, Communication	4·14
9. Domestic Services	4·07
10. Indefinite	2·63
11. Mineral Producers	2·43

Engaged on own account.

The highest proportion of this Group is in Class Indefinite, and the lowest in Class Domestic, thus :—

Percentage proportion of those engaged on own account to Breadwinners in each Class.

	Per cent.
1. Indefinite	75·50
2. Property and Finance	54·25
3. Other Primary Producers	24·62
4. Agricultural Producers	22·36
5. Pastoral Producers	21·92
6. Trade (Commercial)	19·34
7. Professional	16·93
8. Mineral Producers	9·88
9. Industrial	9·33
10. Transport and Communication	74·2
11. Domestic	7·03

Wage-earners.

The highest proportion of this group is in Domestic Service and in Transport and Communication, the lowest in Indefinite and Property and Finance ; thus :—

Percentage proportion of those engaged as Wage-earners to Breadwinners in each Class.

	Per cent.
1. Domestic Service	88·90
2. Transport and Communication	88·44
3. Mineral Producers	87·69
4. Industrial	84·02
5. Professional	78·55
6. Other Primary Producers	68·54
7. Trade	65·71
8. Agricultural Producers	61·94
9. Pastoral Producers	60·76
10. Property and Finance	34·39
11. Indefinite	21·87

Unemployed.

The total number of Unemployed recorded was 2165, or 2·95 per cent. The highest proportion of the Unemployed was in the Mineral Producer Class, 5·48 ; the lowest in Indefinite, 0·39 per cent. ; thus :

Percentage Proportion of unemployed Wage-earners to Breadwinners in each Class.

	Per cent.
1. Mineral Producers	5·48
2. Industrial	4·83
3. Transport and Communication	3·69
4. Domestic Service	2·82
5. Trade (Commerce)	2·62
6. Professional	1·72
7. Pastoral Producers	1·60
8. Other Primary Producers	1·52
9. Agricultural Producers	1·28
10. Property and Finance	0·73
11. Indefinite	0·39

The proportion of unemployed in 1901—2·95 per cent. to all Breadwinners—is higher than in 1891, when it was 2·54 per cent. From such returns as are yet available from other States it is also satisfactory that the condition is favourable to Tasmania.

The following summary gives a more comprehensive account of the numbers and proportions of the various grades of Occupations in Tasmania at the last Census :—

Occupations of the People, 1901.—Grades, &c.

Table showing the Numbers and Proportions per cent. of Persons living in the State belonging to the several Divisions, Classes, and principal Sub-Classes of Occupations, distinguishing the grades of Employer, Employed on own account, Relative assisting, and Wage-earner ; also, distinguishing the Unemployed and the Dependants.

Class.	Sub-Class.	Occupations.	Grade, &c.—Numerical.—(Persons.)								Grade, &c.—Centesimal Proportion.—(Specified.)

Ages of Breadwinners, 1901.

An analysis of the ages of Breadwinners is of the greatest interest in matters concerning the employment of children in various branches of industry. The following gives the numbers and proportions under seven different Age-Groups in respect of all Breadwinners :—

Age-Group.	No.	Per cent. to Total specified.
Under 5 years	..	..
5 and under 15 years	3024	4·12
15 and under 20 years	12,182	16·60
20 and under 25 years	11,595	15·80
25 and under 45 years	29,883	40·72
45 and under 65 years	12,412	16·91
65 and over	4293	5·85
Total specified	73,494	100·00
Unspecified	105	..

Ages 5 and under 15 years.

The highest proportion of the 3024 Children employed was in Other Primary Producers (8·95 per cent.), the lowest in Property and Finance (0·06 per cent.) ; thus :—

Proportion of Children (5 to 15) employed to Breadwinners in each Class.

	Per cent.
1. Other Primary Producers	8·95
2. Agricultural Producers	6·57
3. Pastoral Producers	5·90
4. Domestic Service	5·39
5. Trade	4·37
6. Industrial	3·26
7. Transport and Communication	2·47
8. Professional	·97
9. Mineral Producers	·93
10. Property and Finance	·66
11. Indefinite	·06

Aged Persons, 65 *and over.*

The highest proportion of the 4293 persons aged 65 years and over was in Indefinite (36·44 per cent.), the lowest in Mineral Producers (2·18 per cent.) ; thus :—

Proportion of Aged Persons (65 and over) employed to Breadwinners in each Class.

	Per cent.
1. Indefinite	36·44
2. Property and Finance	26·43
3. Agricultural Producers	7·89
4. Pastoral Producers	6·32
5. Professional	4·31
6. Trade	3·96
7. Industrial	3·82
8. Other Primary Producers	3·72
9. Transport and Communication	2·99
10. Domestic Service	2·94
11. Mineral Producers	2·18

The following summary gives a more comprehensive account of the numbers and proportions of Breadwinners and Dependants under the various Age-Groups :—

Occupations of the People, 1901.—Ages.

Table showing the Numbers and Proportion per cent. of Persons living in the State belonging to the several Divisions, Classes, and principal Sub-Classes of Occupations under various Age-Groups.

SECTION XII.—GENERAL PROGRESS SINCE 1891.

Before bringing this Report to a close it has been thought desirable to add as a supplement certain particulars from the General Statistics of the State for the years 1891 and 1901 for the purpose of marking in what degree the State has made progress in the inter-censal period in matters lying beyond the scope of a Census—*e. g.* Public Finance, Taxation, Trade, Production, Modes of Transport, Communication, Accumulation, &c. For this purpose the following abstract has been compiled in a form convenient for tracing the changes which have taken place :—

General Statistical Summary for the Years 1891 *and* 1901 *showing the difference between the two Census Years.*

Area—26,215 Square Miles.

	1891	1901.	Increase since 1891	
			Absolute.	Per Cent.
Population on 31st December	152,272	174,233	21,981.	14·44
Ditto, mean for year	148,757	173,606	24,849	16·70

[1] The State Departments of Customs and Excise, Post and Telegraphs, and Defences having been transferred to the Commonwealth Government during 1901, the moneys received and disbursed by the Commonwealth on account of Tasmania during 1901 have for comparison been included in the particulars for that year. [2] *i. e.* Gross Revenue *less* Revenue earned by Service Departments and Interest on balance at deposit, &c. [3] Including Private Lines. [4] Including Cable. [5] Posts, Telegraphs, and Telephones. [6] New Industry.

CONCLUDING REMARKS.

In conclusion, I am reminded that this is the second Census in Tasmania that I have had the honour of superintending, viz., 1891 and 1901. On the present occasion I was fortunate in having the assistance of the officers of the permanent staff of the Department, who, with myself, had been advantaged by the experience gained in the organisation and superintendence of all matters pertaining to the enumeration and tabulation of the previous Census of the year 1891. My deputy, Mr. F. M. Hudspeth, as on the former occasion, was placed in immediate charge of the temporary staff engaged in the intricate work of tabulation, and it affords me great pleasure again to record that in this important trust he gave me the greatest satisfaction by the excellent way in which he discharged his onerous duties. The other members of my permanent staff also, from their training and experience, were of the greatest service, accepting with enthusiasm the extra hours and duties thrown upon them by the Census work.

I desire also to mention that my own labours in the organisation and superintendence of all matters relating to the taking of the Census were made lighter than they would otherwise have been by the kind and willing co-operation of the officers of the various Public Departments where their assistance was necessary in carrying out certain branches of Census work. Among these I desire to mention specially the Government Printing Office, in respect of all matter relating to the printing of the Census work; the Surveyor-General, in respect of maps and diagrams; the Post and Telegraph Department for valuable aid in posting notices and promptitude in delivery of important documents and messages; to the Police Department, to the Education Department, to all Heads of Schools and Colleges, to Resident Magistrates and Wardens, and to the Press generally for invaluable aid in affording information, and in advising as to the best mode for making provision for isolated districts. Again also I desire to acknowledge the never-failing courtesy of the Statisticians of the sister States in supplying such information as I required for comparative and other purposes.

I have the honour to be,
Sir,
Your most obedient Servant,

ROBERT M. JOHNSTON,
Government Statistician, and Registrar-General.

Government Statistician, and Registrar-General.

APPENDIX A.—(Model half-size.)

No. of Schedule _____

CENSUS OF TASMANIA, 1901.—HOUSEHOLDER'S SCHEDULE.

Town, Village, or Locality _____

Street, and Name or Number of Dwelling _____

Census Sub-division No. _____

CAUTION.—Any person wilfully refusing or neglecting to fill up, sign, and deliver the Schedule, or to answer the necessary inquiries which the Collectors are required to make, or furnishing false returns or answers, or obstructing any person in the performance of any duty imposed on him by "The Census Act, 1901," shall be liable to a Penalty of Twenty Pounds.

The information given in this Schedule is only to be used for the compilation of Statistical Returns and Accounts. Any person divulging it or making use of it for any other purpose is liable to a Penalty of Twenty Pounds.

BEFORE WRITING ON THIS PAPER, YOU ARE REQUESTED TO READ THE INSTRUCTIONS ON THE OTHER SIDE.

LIST OF MEMBERS OF THE HOUSEHOLD, OR FAMILY, VISITORS, SERVANTS, AND OTHERS, WHO SLEPT OR ABODE IN THIS DWELLING ON THE NIGHT OF SUNDAY, THE THIRTY-FIRST DAY OF MARCH, 1901.

	NAME AND SURNAME.	SEX.	AGE LAST BIRTHDAY	CONDITION AS TO MARRIAGE.	RELATION TO HEAD OF HOUSEHOLD.	PROFESSION OR OCCUPATION.		SICKNESS AND INFIRMITY.	COUNTRY WHERE BORN.	LENGTH OF RESIDENCE.	RELIGIOUS DENOMINATION.	EDUCATION.		DESCRIPTION OF DWELLING.		
						NATURE OR NAME.	GRADE, &c.					DEGREE.	AT PRESENT RECEIVING INSTRUCTION.			
	No person absent on the night of Sunday, 31st March, 1901, is to be entered here; except such as may be travelling or out at work during the night (and not elsewhere returned) and who returns to this House or Dwelling on Monday, April 1st. — The name of the Head of the Household present to be inserted on the first line; Wife, child or, other Relatives, Visitors, Lodgers, and Servants following in their respective order.	Write M against Males, and F against Females.	Enter the Age of Persons One year and over in years only. If the Age be less than One year insert a cross (×).	Write:— M for Married; W for Widow or Widower; D for Divorced; N.M. against all Never Married persons, except young children. [Children are to be set down as never married, unless they have or have had illness in Australasia.]	State whether Wife, Son, Daughter, or other Relative, Visitor, Lodger, or Servant; and in the case of Public or Charitable Institutions, whether Officer, Prisoner, Patient, Inmate, Nurse, &c.	(Before filling in this Column you are requested to read the instructions regarding Occupations on the other side.) The Occupation which each person is following and derives support from at the time of the Census should in all cases be stated; if unemployed at that time the usual occupation should be entered. A person engaged in more than one pursuit should state his occupations in order of their pecuniary importance to himself.	Write:— E if employer of labour. O if in business on one's own account, but not employing others for salary or wages; A if relative assisting head of household in his business, but not receiving salary or wages; W if earning salary or wages; and add— S (except in cases of leave of absence) if not at work for more than a week prior to Census.	If laid up or unable to follow usual occupation by reason of illness or accident, write "Sick" or "Accident;" (assigning cause); or if "Deaf and Dumb" or "Blind," state so.	Enter the Country or Colony (not Town or any other subdivision); if in Australasia, give the name of the Colony or State. If born in Foreign Parts, or at Sea, and a British subject, add P if by Parentage, and add N if by Naturalisation. In the case of persons of the Chinese race, no matter where born, add "Chinese" or C after the birthplace; for Half-caste Chinese add H.C. Where Australian Aboriginals are included in the Schedule, they are to be entered as such immediately after the birthplace, with N.C. added for Half-castes.	If not born in the Colony, state length of residence therein in years. If less than one year insert a cross (×).	Do not use general terms that represent more than one Religious Body, such as "Protestant" instead of "Church of England," &c., "Catholic" instead of "Roman Catholic," "Methodist" instead of "Wesleyan, Primitive, or other Methodists," &c. If a Freethinker, or if no Denomination or Religion, state so. Write against the names of Children, however young, the Religion in which it is intended they are to be brought up. [If any person objects to state the Religious Denomination to which he adheres, the word "Object" to be entered.]	Write:— G.S. for Grammar School; B. for Board only; R. W. for Read and Write; And F if only able to Read, or Read and Write in a Foreign Language. If a University Graduate, state Degree and University. If the age be less than three years insert a cross (×).	Write:— C if at College, Grammar, or High School; S if at State School; P if at Private School; D if at Denominational School; H if receiving instruction at Home.	State whether the outer walls are built of Stone, Brick, Wood, Concrete, Iron, Canvas, or what other materials; also state number of Rooms, including Kitchen, and exclusive of Shop, Office, Store, Bathroom, Pantry.

APPENDIX B.

CENSUS OF TASMANIA, 1901.

INSTRUCTIONS TO ENUMERATORS.

Issued with the approval of the Hon. the Chief Secretary, under Sect. 9 of Census Act, 1901.

SUB-DIVISION OF DISTRICT.

First duty.

1. THE first duty of an Enumerator is to make a careful study of the chart or charts (sent herewith) upon which the area forming his district is defined.

Enumerator's District defined by a *blue* border corresponding to limits of an Electoral District (H.A.)

2. The *Enumerator's District* exactly corresponds with that of a particular Electoral District (House of Assembly), whose marginal boundary, dividing it from contiguous Enumerator Districts, is indicated by a well-defined *blue* border. Within this *blue* boundary the coloured divisions of Municipal and Police *(red)*, Registration *(yellow)*, Road Trust *(green)*, and County *(brown)* break up the *Enumerator's District* into a series of irregularly shaped meshes, each one of which forms a distinct *Census Sub-division*, distinguished by a specific number enclosed within a conspicuous coloured circle; thus— (6)

Number of Sub-enumerators to be determined by Enumerator.

3. The next duty of the Enumerator will be to determine the number of persons necessary to perform the duties of Assistants or *Sub-enumerators* as defined in separate Instructions. The instructions also given hereafter, however, must first be carefully studied, as they will materially aid the Enumerator in determining the number of Sub-enumerators necessary to perform the work required of them within the specified time.

Conditions to be observed in determining the limits of each Sub-enumerator's Sub-District. Sub-districts must not embrace too large an area nor too many dwellings.

4. The principal conditions to be observed in dividing the Enumerator's District in Sub-districts, each having *one* Sub-enumerator or Collector, are briefly as follow :—

(*a.*) Each Sub-district, so far as possible, must not comprise a larger area than admits of all the Schedules being called for by its (one) Sub-enumerator on Monday and Tuesday, the 1st and 2nd April. (In sparsely populated and unsurveyed Districts, however, some discretion is allowed to the Enumerator as to how far this rule can be adhered to without the risk of confusion as to boundaries, and in cases where there is difficulty of securing a sufficient number of competent Sub-enumerators).

Limits of number of dwellings to a Sub-district in town and country districts respectively.

(*b.*) In apportioning each Sub-enumerator's work, the Enumerator must consider the distance to be traversed in going from dwelling to dwelling, and must therefore form the Sub-districts so as to comprise more dwellings where they lie near together, as in a town, and fewer when they lie far apart. Thus, in a town where dwellings adjoin or lie near together, the number included in the Sub-district may be from 200 to 250 inhabited houses; in suburban districts, villages, or gold-fields, where the dwellings, though near, are more scattered, the number may be from 100 to 200; in the more settled agricultural and pastoral districts, where there is occasionally a distance of more than half a mile between one dwelling and the next nearest, the number may be from 50 to 100; and in the more scattered agricultural or thinly populated districts, where intervals of two miles or upwards sometimes intervene, less than 50 may be included in a Sub-district.

Special arrangements for outlying localities.

(*c.*) As regards arrangements for collecting among lands insulated by water, or in outlying pastoral, timber, fishing, mining, or prospecting localities, &c., the special circumstances affecting each must be taken into account both as regards the time to be allowed and the number of dwellings to be allotted to each Sub-enumerator. But in all cases the sooner the Schedules are collected after the 31st March the easier it will be to supply omissions or to rectify errors. No more time, therefore, should be allowed than is absolutely necessary.

Boundaries of Sub-district must coincide with coloured boundaries on Chart.

(*d.*) Each Sub-district must be composed of one or more *Census Sub-divisions*, whose external boundary must coincide exactly with the outer boundaries of the *existing Census Sub-divisions* forming its parts. *Census Sub-divisions* should not as a rule be divided so as to form parts of two separate Sub-districts. (Should it be shown to be impossible to adhere to this rule in all cases, the Enumerator must at once communicate with the Superintendent of Census, specifying the nature of the difficulty, and indicating by a well-defined pencil line the exceptional proposed boundary lines.)

GENERAL INSTRUCTIONS.

This Schedule is to be filled up in accordance with the headings to the columns on the other side, BY THE OCCUPIER OR PERSON IN CHARGE OF THE DWELLING, with particulars respecting all the persons who slept or abode therein on the night of SUNDAY, the 31ST MARCH, 1901, together with those travelling or out at work during that night (and not included elsewhere), and who return to this House or Dwelling on MONDAY, 1st APRIL. If the house is occupied by different families in separate stories or apartments, each such story or apartment must be treated as a separate DWELLING, and the OCCUPIER OR PERSON IN CHARGE of each must make a Return upon a separate Schedule. In the case of large Pastoral and other similar Establishments the Proprietor or Superintendent may fill in the Returns of his complete Establishment, *but a separate Schedule must in such case be filled for each of the Outstation Dwelling-houses or Huts in which a distinct family or person resides*, in addition to that for the Home Station; and if any Out-station is in a different Collector's District from that of the Home-station, the Schedule for it is to be delivered to the Collectors of the Sub-district in which such dwelling is situated.

This paper will be called for by the Collector on Monday, the 1st day of April, or as soon after as practicable. By that date the answers should be written in the proper columns, and the document duly signed by the Occupier or Person in Charge. It is the Collector's duty to verify the facts, and, if the form, from any cause, should not have been filled up, or should have been insufficiently or erroneously filled up, to record the necessary particulars or make the necessary corrections, from inquiries which he is authorised to make for that purpose.

INSTRUCTIONS FOR FILLING UP THE COLUMN HEADED "PROFESSION OR OCCUPATION."

ARMY AND NAVY.—If on actual service, state so. If retired, state present occupation.

PERSONS IN THE SERVICE OF THE GENERAL OR LOCAL GOVERNMENT to state occupation, position, department; and, if engaged in any other occupation, to specify its nature.

JUSTICES OF THE PEACE, ALDERMEN, TOWN COUNCILLORS, &c., and other important public officers, to state their ordinary profession or occupation.

MINISTERS OF RELIGION to state Denomination. They are requested not to employ the indefinite term "*Clerk*." Local or occasional preachers to return their ordinary occupations.

MEMBERS OF THE LEGAL PROFESSION to state whether in actual practice; if not practising, to state present occupation. Persons employed in Solicitors' Offices to distinguish whether they are articled or other Clerks.

MEMBERS OF THE MEDICAL PROFESSION to state whether they are Physicians, Surgeons, or General Practitioners, and return themselves as *practising* or *not practising*; if not practising, to state present occupation.

TEACHERS, AUTHORS, PUBLIC WRITERS, and ARTISTS to state the particular branch of science, literature, or art in which they are engaged.

ENGINEERS to state whether civil, mechanical, electrical, mining, marine, &c.; also the nature of work on which engaged. Surveyors to state whether land, mining, marine, &c.

ENGINE-DRIVERS, STOKERS, FIREMEN, &c., to state the nature of the business in connection with which they are occupied, thus—"*Engine-driver at Sawmill*," "*Stoker at Foundry*," "*Fireman on Railway*," &c. "*Engine-drivers*" are not to be entered as "*Engineers*."

MINERS to specify the nature of the mineral on which they work, and in respect of metallic ores, to add whether *lode* or *alluvial*. A Miner working for another should return himself as "*Miner*," not as labourer.

ARTIZANS and MECHANICS should always mention the particular branch of their trade, thus—"*Ship Carpenter*," "*House Carpenter*," "*Shingler*," "*Coachsmith*," "*Locksmith*," "*Horse-shoer*."

CARTERS, CARRIERS, LABOURERS, SERVANTS, &c., to be described in connection with their usual employment, thus—"*Carter to Grocer*," "*Bullock Driver on Station*," "*Labourer making Roads*," "*Omnibus Driver*," "*Cabman*," "*Railway Porter*," "*Telegraph Messenger*," "*Domestic Servant*."

PERSONS ENGAGED IN TRADE OR COMMERCE, as Merchants, Manufacturers, Storekeepers, Retailers, Brokers, Agents, Auctioneers, &c., to state the particular business in which they are engaged, or the principal commodity in which they deal, thus—"*Grain Merchant*," "*Hat Manufacturer*," &c.

CLERKS, BOOKKEEPERS, SALESMEN, SALESWOMEN, SHOPMEN, COMMERCIAL TRAVELLERS, &c., to be described according to the business with which they are connected, thus—"*Bank Clerk*," "*Railway Clerk*," "*Salesman in Soft Goods Warehouse*," "*Shopman to Grocer*," "*Traveller to Wine Merchant*," &c.

The term "Farmer" or "Market Gardener" to be applied to all persons actually in occupation of land and tilling, whether proprietors or tenants; the term "Landowner" is too vague. "Market Gardeners" must not omit the word "*Market*." The term "Farmer" is understood to mean "Agricultural Farmer"; if "Dairy" or "Poultry" Farmer, &c., it should be so stated.

PERSONS NOT FOLLOWING ANY PROFESSION, TRADE, OR CALLING, and not holding any public office, but possessed of independent means, may designate themselves "*Proprietor of Land*," "*Proprietor of Houses*," "*Capitalist*," "*Annuitant*," as the case may be. The word "*Householder*" should not be used in place of "*Proprietor of House*," nor the word "*Gentleman*" or "*Lady*" in place of "*No Occupation*."

WIVES, SONS, DAUGHTERS, BROTHERS, OR OTHER RELATIVES habitually helping on farms and stations, or engaged in hotels, shops, or any other industrial pursuits, should be returned as "*Wife assisting*," "*Son assisting*," "*Daughter assisting*," &c., as the case may be.

WOMEN.—The occupations of Women who are employed in any but domestic duties should be distinctly recorded; but they should not be entered as engaged in the occupations of their Husbands or Fathers, &c., unless they habitually assist them. When only in the capacity of Wife, Mother, Daughter, Sister, &c., write "*Domestic Duties*."

CHILDREN being educated to be designated "*Scholar*," If not engaged as well in any industrial pursuit; but, if following any such pursuit during portion of their time, as, for instance, delivering or selling newspapers, minding cows, &c., before or after school hours, to be set down as of that pursuit, the entry in the special column under the head "*Education*," sufficiently showing that they are also receiving instruction.

PERSONS IN HOSPITALS, ASYLUMS, GAOLS, &c.—The position of Officers in the Institution, as "*Warder*," "*Nurse*," &c., is to be given; and in the case of Inmates, "*Prisoner*," "*Patient*," their calling (if any) before they entered the Institution is to be inserted in the "Occupation" column.

N.B.—Great care must be taken in writing the name of an Occupation which is *common to many kinds or branches of business, to add the name of the Employer's trade or business*. The following names are of this type, and require the additional information suggested within parentheses, thus:—

Assistant (to Draper);	Clerk (to Brewer);
Accountant (to Ironmonger);	Carter (to Miller);
Apprentice (to Baker);	Engine-driver (on Railway);
Agent (for Shipping Company);	Labourer (on Wharf, on Roads, &c.);
Cashier (in Bank);	and such like.

*** Every answer should be written in full. The use of dots („) or ditto (do.) leads to numerous mistakes, and is not to be accepted by the Collectors.

APPENDIX B.

CENSUS OF TASMANIA, 1901.

INSTRUCTIONS TO ENUMERATORS.

Issued with the approval of the Hon. the Chief Secretary, under Sect. 9 of Census Act, 1901.

SUB-DIVISION OF DISTRICT.

First duty.

1. THE first duty of an Enumerator is to make a careful study of the chart or charts (sent herewith) upon which the area forming his district is defined.

Enumerator's District defined by a *blue* border corresponding to limits of an Electoral District (H.A.)

2. The *Enumerator's District* exactly corresponds with that of a particular Electoral District (House of Assembly), whose marginal boundary, dividing it from contiguous Enumerator Districts, is indicated by a well-defined *blue* border. Within this *blue* boundary the coloured divisions of Municipal and Police *(red)*, Registration *(yellow)*, Road Trust *(green)*, and County *(brown)* break up the *Enumerator's District* into a series of irregularly shaped meshes, each one of which forms a distinct *Census Sub-division*, distinguished by a specific number enclosed within a conspicuous coloured circle; thus— (6)

Number of Sub-enumerators to be determined by Enumerator.

3. The next duty of the Enumerator will be to determine the number of persons necessary to perform the duties of Assistants or *Sub-enumerators* as defined in separate Instructions. The instructions also given hereafter, however, must first be carefully studied, as they will materially aid the Enumerator in determining the number of Sub-enumerators necessary to perform the work required of them within the specified time.

Conditions to be observed in determining the limits of each Sub-enumerator's Sub-District. Sub-districts must not embrace too large an area nor too many dwellings.

4. The principal conditions to be observed in dividing the Enumerator's District in Sub-districts, each having *one* Sub-enumerator or Collector, are briefly as follow :—

(*a.*) Each Sub-district, so far as possible, must not comprise a larger area than admits of all the Schedules being called for by its (one) Sub-enumerator on Monday and Tuesday, the 1st and 2nd April. (In sparsely populated and unsurveyed Districts, however, some discretion is allowed to the Enumerator as to how far this rule can be adhered to without the risk of confusion as to boundaries, and in cases where there is difficulty of securing a sufficient number of competent Sub-enumerators).

Limits of number of dwellings to a Sub-district in town and country districts respectively.

(*b.*) In apportioning each Sub-enumerator's work, the Enumerator must consider the distance to be traversed in going from dwelling to dwelling, and must therefore form the Sub-districts so as to comprise more dwellings where they lie near together, as in a town, and fewer when they lie far apart. Thus, in a town where dwellings adjoin or lie near together, the number included in the Sub-district may be from 200 to 250 inhabited houses; in suburban districts, villages, or gold-fields, where the dwellings, though near, are more scattered, the number may be from 100 to 200; in the more settled agricultural and pastoral districts, where there is occasionally a distance of more than half a mile between one dwelling and the next nearest, the number may be from 50 to 100; and in the more scattered agricultural or thinly populated districts, where intervals of two miles or upwards sometimes intervene, less than 50 may be included in a Sub-district.

Special arrangements for outlying localities.

(*c.*) As regards arrangements for collecting among lands insulated by water, or in outlying pastoral, timber, fishing, mining, or prospecting localities, &c., the special circumstances affecting each must be taken into account both as regards the time to be allowed and the number of dwellings to be allotted to each Sub-enumerator. But in all cases the sooner the Schedules are collected after the 31st March the easier it will be to supply omissions or to rectify errors. No more time, therefore, should be allowed than is absolutely necessary.

Boundaries of Sub-district must coincide with coloured boundaries on Chart.

(*d.*) Each Sub-district must be composed of one or more *Census Sub-divisions*, whose external boundary must coincide exactly with the outer boundaries of the *existing Census Sub-divisions* forming its parts. *Census Sub-divisions* should not as a rule be divided so as to form parts of two separate Sub-districts. (Should it be shown to be impossible to adhere to this rule in all cases, the Enumerator must at once communicate with the Superintendent of Census, specifying the nature of the difficulty, and indicating by a well-defined pencil line the exceptional proposed boundary lines.)

(*e.*) If a fresh boundary line must be introduced, breaking up an *existing Census Sub-division*, now indicated by a specific number within a coloured circle, add a distinguishing number to each of the divided parts as directed in the following example :—

Thus, suppose a Census Sub-division—say $\left(6\right)$—be still further divided into two parts, then let each of the latter be afterwards distinguished in reference by similar rings in pencil, repeating the original Census Sub-division number, but distinguishing the divided parts by the additional figures, say 1 and 2—thus $\left(\frac{6}{1}\right)$ $\left(\frac{6}{2}\right)$. By this means harmonious relationship with the original Census Sub-division may still be maintained; for $\left(6\right)$ = to $\left(\frac{6}{1}\right)$ + $\left(\frac{6}{2}\right)$—that is, the original Census Sub-division is equivalent to its two parts taken together.

Sub-districts to be distinguished by Capital Letters, and a description must be prepared on special Form.

5. When the Enumerator has satisfactorily divided his District into Sub-enumerators' Sub-districts, in accordance with the foregoing instructions, he may indicate each of the latter by a series of Capital letters, A. B. C., &c., tracing their limits throughout and along existing coloured boundaries by a *bold pencil line*. At the same time he must prepare a description of the limits and of the *Census Sub-divisions* contained in each *Sub-district* on the forms herewith supplied for that purpose. A model of one of these Forms, filled up, is here given as an example, thus :—

BOUNDARIES OF ENUMERATOR'S AND SUB-ENUMERATOR'S DISTRICT.

Sub-division of the Enumerator's District corresponding to the Electoral District of HOBART, *(H. of A.)*

Sub-district.	Census Sub-division comprising each Sub-district.
A	$\left(6\right)$ $\left(\frac{7}{1}\right)$ $\left(\frac{7}{2}\right)$
B	$\left(8\right)$ $\left(\frac{7}{3}\right)$ $\left(9\right)$
C	$\left(10\right)$ $\left(\frac{11}{1}\right)$ $\left(\frac{11}{2}\right)$

Chart and Boundary Form to be sent to Superintendent of Census.

6. Having marked the divisions of Sub-districts on charts, and having defined their limits on Boundaries Form, both Charts and Form must as speedily as possible be returned to Superintendent of Census in order that they may be finally approved of, and for the purpose of enabling the Superintendent of Census to prepare special separate tracings for each Sub-district so determined, for the guidance of each Sub-enumerator.

Sub-enumerator's Charts to be supplied, with other forms, &c.

7. As soon as the latter are prepared, the Enumerator's charts will again be returned to the Enumerator for local reference, together with the Charts for Sub-enumerators. The Enumerator at the proper time will deliver the latter, with all necessary forms transmitted to him, to the respective Sub-enumerators for their guidance, taking care that any such maps are presented and returned finally at the proper time, along with the completed Returns, Books, and Schedules.

Well-marked boundaries to be adopted.

8. It is essential to the accuracy of the enumeration that the Sub-districts be well defined and clearly described, so that no doubt may exist among the Sub-enumerators as to which Sub-district any one house may belong, and that there may be no chance of the inmates being, through any such doubt, either omitted or numbered twice over. This can only be done effectually by adopting well-marked natural or artificial boundaries, such as rivers, creeks, the waterflow of gullies, streets, fenced-in or well-beaten roads, lines of electric telegraph, &c. The lines must be supposed to run down *the middle of the street, river, road, &c.*, so that the houses or properties on one side may be in one Sub-district, and those on the opposite side in another. Imaginary lines drawn from point to point on maps are inadmissible, except in extreme cases.

The whole District to be subdivided.

9. The Enumerator will bear in mind that the Sub-districts into which he divides his District must together form the whole of that District, and that no part is to be left out under the assumption that it is uninhabited.

Each Sub-district to be in one block.

10. He will also understand that it is expedient that every Sub-District should be one connected portion of country, and should not consist of two or more detached portions.

Time allowed for distributing Forms.

11. In connection with the period to be allowed for collection, as already referred to, that of distribution is to be considered; and experience has shown that in densely peopled Districts,

where the Sub-enumerators act on foot, one day for leaving the Schedules is sufficient, thus accomplishing the work by the labour of three days, viz., one for distribution and two for collection; but where the population is more scattered, and the greater portion of the time is occupied in travelling from house to house, it will be necessary to allow an equal, or nearly equal, time for distribution and collection; but no more time is to be allowed than is actually necessary for the purpose. The Sub-enumerators are not to be paid for the interval (if any) between the delivery and collection of the Schedules, during which there is nothing for them to do.

Sub-enumerators to be assembled.

12. As an additional precaution against any misconception on the part of the Sub-enumerators as to their respective boundaries, it would be well that the Enumerator should endeavour, where possible, to collect them all together on some day prior to the taking of the Census, so that each, by conferring with the Sub-enumerators of the Sub-districts adjoining his division may arrive at a clear understanding of its exact boundaries. The Enumerator should take the opportunity of ascertaining whether the instructions to Sub-enumerators are properly understood, and of giving any explanation that may be wanted as to how the business of enumeration is to be performed, or any other matter left unexplained or doubtful in the instructions to Sub-enumerators.

Doubt as to boundaries.

13. In case of any doubt as to the exact boundary line between his own and an adjoining District, the Enumerator is recommended to communicate with the Enumerator of that District and to enter into such arrangement as will enable the Sub-enumerators on either side of the boundary to act in concert, so that neither omissions nor overlapping may occur. The Enumerator is requested to take every precaution that the persons he has appointed act in concord with each other, and with the Sub-enumerators of adjoining Districts.

APPOINTMENT OF SUB-ENUMERATORS.

Selection of Sub-enumerators.

14. Having arranged the sub-division of his District, the next matter to occupy the attention of the Enumerator is the selection of as many Sub-enumerators as there are Sub-districts.

Duties of Sub-enumerators.

15. The principal duties of the Sub-enumerators are described in the tenth, eleventh, twelfth, and eighteenth Sections of the Census Act, and in the more detailed instructions which have been drawn up for their guidance. With these clauses and instructions the Enumerator should make himself familiar.

Qualifications of Sub-enumerators.

16. To fulfil his duties properly the Sub-enumerator must be a person of intelligence and activity, must not be less than eighteen years of age, must read and write well, and must be sufficiently healthy and strong to undergo the exertion of performing his work with promptness; he must be of temperate habits and of sufficiently good address to convey all the requisite information concerning the Census in a manner calculated to obtain the good-will and co-operation of the inhabitants. It will likewise be necessary that he should be well acquainted with the Sub-district in which he is required to act. It being of the greatest importance that the work should be efficiently performed, no consideration whatever, except that of fitness for the performance of the duty, shall be suffered to influence the Enumerator in the appointment of Sub-enumerators.

Sub-enumerators should live in their Sub-districts.

17. It is further desirable that each Sub-enumerator should live in or near his own Sub-district, so that he may not have the additional labour of going far from home before he can begin his duties. It is not, therefore, advisable that many persons living at or near the same place should be selected. This rule, however, is not prescribed as one to which a rigid adherence is required, but on which the Enumerator must exercise his discretion, remembering that character and fitness are most to be considered.

Horse and foot Sub-enumerators.

18. The Sub-enumerators are of two classes—those acting on horseback and those acting on foot. The former are to be appointed only in country districts where a considerable distance has to be travelled in going from house to house. When mounted Sub-enumerators are employed, the Enumerator should see that horses are actually used, and that the Government is not improperly charged with the extra allowance paid to that class when the work has been performed on foot.

List of Sub-enumerators to be forwarded.

19. Having obtained a sufficient number of persons willing to serve as Sub-enumerators in his District, and having satisfied himself as to their fitness by making the requisite inquiries respecting them, the Enumerator must prepare in duplicate, on the form headed "Enumerator's Schedule B," a list of Sub-Enumerators, one copy to be submitted to the Governor in Council for approval, and the other to be returned to the Enumerator with the notification of such approval, or with such other minutes as may be necessary.

Rate of Payment to Sub-enumerators.

20. In order to place Enumerators in a position to engage competent persons to act as Sub-enumerators, the Government has sanctioned their employment within the following scale:—When acting on horseback, not exceeding £1 per diem; when acting on foot, not exceeding 10s. per diem. These, it will be observed, are the maximum rates; it is not anticipated, however, that it will be necessary to give the full amount except in specially situated districts.

The Enumerator will therefore bear in mind that, should the services of suitable persons be obtainable at, and in his opinion be adequately remunerated with, a less sum, it is his duty to economise the funds voted for the Census as much as possible.

GENERAL INSTRUCTIONS.

Sub-enumerators' duties to be explained.

21. Having complied with the requirements of the Census Act, so far as the sub-division of his district and the selection of Sub-enumerators is concerned, and having performed the duties appertaining thereto in accordance with the foregoing instructions, the Enumerator will ascertain that all his Sub-enumerators understand their duties and how the business of enumeration is to be performed, affording them all requisite information and explanation.

Declaration to be subscribed by Sub-enumerators.

22. The Enumerator must take care that each person accepting the office of Sub-enumerator makes, before a Justice of the Peace, the declaration required by Section 8 and Schedule (2) of the Census Act, for which purpose forms are supplied. These documents must be forwarded to this office.

Payment contingent upon work being well done.

23. The Enumerator must also make known to all those he appoints that no person employed on the Census will be entitled to payment unless he has faithfully performed his duties.

Agreements with Sub-enumerators.

24. As a security against misunderstanding, the Enumerator will, after his arrangements as detailed in "Schedule A" have been approved, give to each Sub-enumerator one of the forms of "Sub-enumerator's Appointment" duly filled up and signed by himself, and after inserting the same particulars in the form "Sub-enumerator's Acceptance of Office," he will require the Sub-enumerator to sign it. The Enumerator must take care that the times and rates of payment entered in these forms agree exactly with those embodied in "Schedule A," and will also be sure to make each Sub-enumerator aware that he can only obtain the number of days' pay arranged to be allowed unless some unforeseen circumstance should occur which may justify an additional allowance. The forms "Sub-enumerator's Acceptance of Office" the Enumerator will retain until the whole of the work has been completed and the Sub-enumerators paid.

Book to be written up in the evening.

25. The Enumerator will also explain to the Sub-enumerators that no extra time can be allowed for making up their books, as that duty is supposed to be performed in the evening, after the work of collecting is over for the day.

Removal, &c., of Sub-enumerators.

26. Should the Enumerator deem it advisable for any reason to remove a Sub-enumerator after his appointment, or should any Sub-enumerator be incapacitated from acting, the Enumerator must at once appoint another to the vacancy and report the same for the approval of the Governor in Council.

Forms to be given to Sub-enumerators.

27. The Enumerator must deliver to each Sub-enumerator as many Householders' Schedules as there are dwellings in his Sub-district, together with some spare ones, and cause him to leave, on Saturday, the 30th March, or on such other of the previous ten days ending on that day as may be deemed expedient, one of those Schedules for every household. He will also supply him with as many of the other Schedules as may be necessary, and with a copy of the "Instructions to Sub-enumerators," and one or more of the Sub-enumerator's books.

Returns from Sub-enumerators.

28. The Sub-enumerators are required by Section 12 of the Census Act, 1901, to deliver the Schedules to their Enumerators within 3 days after they have completed the collection, and it will be the duty of the Enumerator to see that this direction is carried out.

Sub-enumerators' work to be checked.

29. The Enumerator must examine separately the Householders' and other Schedules, and see that they are properly filled in, and in case of mistakes or omissions of any kind, must insist on their being rectified. He must see that in each Sub-enumerator's book the Census Sub-divisions, &c. are correctly noted, and that the book is accurately made up. As the Enumerator has the selection of his Sub-enumerators, he is responsible for their being competent to perform their work properly, and must supply all deficiencies.

"Enumerator's Schedule C"

30. The Enumerator must make out a summary of the returns given in by his Sub-enumerators on the form headed "Enumerator's Schedule C," and supply the other information required to be entered in that document. Five days are allowed by Section 13 of "The Census Act" for this purpose, but if the Sub-enumerators do their work properly, and see that none of the particulars required are omitted or misstated, a much shorter time should be sufficient.

Travellers.

31. In all cases where the Enumerator has reason to suppose that travellers or others have camped out in any Sub-district on the night of the 31st March, and has received no return respecting them, he must be particular to inquire strictly into the matter. He must also examine carefully the returns of travellers, &c. sent in by the different Sub-enumerators, and if he has reason to believe that all have not been taken, he must forward his estimate of the omissions, with the data on which it is founded.

Schedules to be accounted for.

32. The Enumerator is expected to see that each Sub-enumerator duly accounts for all the schedules he receives, and returns those which are not required.

Section 13 of Census Act.

33. The Enumerator must carefully attend to the requirements contained in the thirteenth section of the Census Act, respecting the time and mode of transmitting the schedules and other documents, taking care that every parcel has clearly recorded on it the name of his own district, and the several numbers of the Census Subdivisions to which it belongs, and is well and securely made up, and in such sized parcels as the Postmaster of the district may deem expedient.

Payment of Sub-enumerators.

34. It will also be his duty to certify to the correctness of all claims for payment made by those employed under him, and to forward the same to the Superintendent of the Census.

Sudden Illness, &c., of Enumerators.

35. Should the Enumerator be prevented by sudden illness or other unavoidable cause from carrying out the task entrusted to him, he will communicate the fact to the Superintendent of Census without delay ; but should there not be sufficient time to appoint a successor, he will at once depute a person to act for him, subject to the subsequent approval of the Governor in Council.

Communications.

36. All communications on the subject of the Census are to be addressed to "The Superintendent of the Census, Hobart," and are to be marked on the outside with the word "Census," in accordance with the sixteenth section of the Act, which provides that communications so made shall be free of postage.

APPENDIX C.

CENSUS OF 1901.

INSTRUCTIONS TO BE OBSERVED BY SUB-ENUMERATORS.

Duties prior to distribution of Householders' Schedules.

Study of boundaries of District.

1. EACH Sub-enumerator after his appointment must attend upon his Enumerator for the purpose of receiving instructions, and for the purpose of conferring with other Sub-enumerators with the view of settling any points which may cause doubts as regards the exact limits of their respective Sub-district boundaries as laid down on the charts prepared for their guidance.

Enumerator's Sub-district may contain one or more Census Sub-divisions, each marked by a distinctive number.

2. Each Sub-enumerator's Sub-district may contain one or more Census Sub-divisions, each of which has defined limits indicated by coloured lines, and are each distinguished on the chart by a number within a conspicuous blue circle ; thus— (3) $\left(\frac{4}{1}\right)$ $\left(\frac{5}{3}\right)$

Doubts as to boundaries to be settled by conferring with Enumerator or with other Sub-enumerators.

3. It is of the greatest importance that each Sub-enumerator should at the outset make himself thoroughly familiar with the exact limits of each and all of the Census Sub-divisions forming his Sub-district. Should doubts arise in his mind with respect to any part of his District, he must at once discuss and settle them with his Enumerator or with the Sub-enumerators of the divisions adjoining his own, so that he may neither omit any portion of his own Sub-district no enter into that of any other Sub-enumerator.

Instructions on back of Householder's Schedule to be read and thoroughly mastered.

4. The next duty of the Sub-enumerator is to read and thoroughly master the Instructions printed upon the Householder's Schedule. The examples given in Model Schedules at the back of each form will at once convey to him the greater part of the necessary guidance as to the manner in which particulars under each head are to be recorded. A little attention will suffice to make him familiar with the various signs and abbreviations and their signification.

Consult Enumerator on doubtful points.

5. Be careful to note any part of the printed Instructions that may appear to lack clearness, and obtain the Enumerator's interpretation upon it.

Knowledge of instructions must be sufficient to check accuracy of entries. Also read Regulations and Sections of Act defining duties.

6. Having mastered all the Instructions by such study, the Sub-enumerator will now be prepared to check the accuracy of the entries made subsequently by each Householder.

7. In addition to the Instructions contained in Householder's Schedule, the Sub-enumerator should also carefully read those Sections of the Act describing his duty and obligations, as well as the Regulations issued by the Governor in Council under Section 24, copies of which are given herewith.

Distribution of Schedules.

Householder's Schedule.

8. At the proper time each Sub-enumerator will be supplied with a sufficient number of blank Householders' Schedules for distribution within the various Census Sub-divisions comprising his special sub-district ; that is to say, one Schedule for each distinct family.

Schedules to be numbered consecutively before distribution.

9. On receipt of the supply of Schedules the Sub-enumerators, in the view of being able to identify and secure their collection within the proper Census Sub-division, shall insert the number of such Sub-division in place set apart in top right corner of each form, and shall at once proceed to number each Schedule in consecutive order, commencing with No. 1. A space is set apart for this *Schedule number* at the top (right corner) of each form. This series of Schedules so numbered is afterwards referred to as "The Original Series."

Distribution of Schedules.

10. Within ten days preceding the night of the Census, the Sub-enumerator is to leave at every dwelling-house in his sub-district one or more of the previously numbered Householders' Schedules, according to the number of separate families residing in such dwelling ; and at the residence of the occupier, owner, or manager of every occupied allotment of land, and at every school, lodging-house, hotel, or establishment where people are domiciled. On leaving these Schedules he should state that they will be called for on Monday, 1st April, or as soon thereafter as possible; and should specially inform masters or persons in charge of hotels, lodging-houses, and the like that they will be required to give full particulars, as set forth in Schedule, respecting every person who abode in their houses on the night of the 31st March.

11. It is further directed that the Schedules be distributed in the order of their arranged consecutive numbers, noting in Sub-enumerator's pocket memorandum-book the number of Schedule and such particulars as will enable Sub-enumerator afterwards to identify the dwelling—such as *street, number, name of house, or name of occupier.*

Schedules to be distributed in the order of their consecutive numbers.

12. Where there is more than one *Census Sub-division* within the Sub-enumerator's sub-district, it is necessary that the distribution within any one of these *Census Sub-divisions* should be completed before commencing with the next; and in order that each Schedule afterwards may be identified with the place or locality, it is desirable before setting out each day to fill in the *Census Sub-division number*, as indicated on the chart in the place reserved for that number on the top right-hand corner of the Schedule, at the same time taking due care to fill in, rather under than over, the number of Schedules that may be safely expected to suffice for distribution within that sub-division during the day.

Distribution in one Census Sub-division to be completed before commencing the next.

13. A reserve of blank forms may be taken to supply deficiencies, and these may have the *Census Sub-division number* written in by indelible-ink pencils at the moment of distribution.

Census Sub-division number also to be written in Schedule prior to distribution.

14. Great care must be exercised in seeing that this important sub-division number is written on every form before delivery, as upon it depends the whole of the ultimate tabulation of particulars as regards locality.

Care to be taken in inserting Sub-division number.

15. Before setting out in each day it is recommended that the Sub-enumerator should carefully study the course he should take in order that the distribution should be made in such a systematic way as shall ensure the complete distribution in any one locality without unnecessarily going over the same ground a second time. At the close of each day make a note of the course thus taken, for the purpose of ensuring that the same course (as nearly as possible) may be taken when the final collection of Schedules is undertaken.

The day's course to be carefully studied before starting, and a note of the same recorded at close of day.

16. A collector should never leave any one locality, or, if in a city, a block or square, without satisfying himself by enquiry or otherwise that no dwelling-place, temporary or permanent, has been overlooked.

Care to be taken that no dwelling-place is overlooked.

17. Any township, goldfield, or similar locality having 100, or more, inhabitants must be taken separately, and have a separate Sub-division number.

Towns, &c., with over 100 inhabitants.

Collection of Schedules.

18. On the morning of the 1st April each Sub-enumerator, taking with him a supply of blank forms for the purpose of supplying discovered omissions or to use in place of those lost or injured, also a bottle of ink and some pens, will proceed to revisit every dwelling or place at which he has left the Schedule in the various Census Sub-division of the sub-district assigned to him, and must continue his work of collection on the following day or days until the whole of the schedules left have been recovered.

Collection of Schedules.

19. In doing so he must carefully consult his notes of the course he had pursued in their distribution, and adopt exactly the same course as far as possible in the process of collection. By observing this method he will secure two very important ends. In the first place, the original care bestowed in selecting the course which ensures completeness with the least amount of travelling will also be of similar advantage in their collection; and, in the second place, seeing that the Schedules have been issued in the order of their *consecutive* or *running numbers*, the collection by the same route ensures that each Schedule will be recovered in the same consecutive order of their running numbers. The occurrence of a *break* or a *missing number* in collecting will at once suggest to the Collector that some dwelling has been missed *before leaving the spot or locality*, and thus be a guarantee of completeness of collection as well as a great saving of labour and time.

Notes of the course of distribution to be consulted and followed.

20. Where a fresh form is substituted for a lost or injured one, care must be taken to write "substituted form" at the head, and if satisfied of correctness, write in the proper place the *Schedule Number* of the original form lost or injured.

Substituted forms.

21. Where, from omission in original distribution, fresh Schedules are issued out of the regular course or order of running numbers, they should form à separate series of consecutive numbers distinguished by the letter A.,—thus, A 1, A 2, A 3, and so on. The latter series are afterwards to follow the original series in the Sub-enumerator's Compilation Book belonging to the same Census Sub-division group.

Schedules issued out of regular course to supply omissions, &c., to be distinguished by the letter A.

Examining and Checking the Schedules.

22. On the production of the Schedule when asked for at each dwelling, it must be carefully examined, in order to ascertain before leaving that it contains all the particulars required, and, if not, he must then endeavour to obtain such further information as is necessary. He must be careful to ask if all the persons entered on the Householder's Schedule on the night of the 31st March slept or dwelt in the house, or in any part thereof which is occupied by the person making the return; also whether any members of the family who were absent on that night are included, and, if so, he must strike them out, initialling such alteration, and writing the word "absent" in the margin.

Schedules to be examined and defects or omissions made good.

Inmate absent temporarily.

23. He should likewise enquire if any person was temporarily absent on the night of the 31st March, and whether there is reason to suppose—in consequence of such person being in the bush travelling on that night, or on account of his being boating, fishing, on watch, working in a mine or elsewhere—he may not have been recorded. If this should turn out to be case, the Sub-enumerator should make an entry on a separate Householder's Schedule of such particulars as would have been furnished respecting such person had he been at home, so far as they can be ascertained, with a note stating the cause of absence, &c.

If any person enumerated in the column is married, whose wife or husband, as the case may be, is either absent from the colony or is residing at the time in some other dwelling, where he or she is likely to be returned in a separate Schedule—in this case, such husband or wife must state after their name, husband or wife "absent," as the case may be.

Special Schedules for absent persons to be distinguished by the letter B.

24. All such Special Schedules are to be numbered with an independent series of consecutive or running numbers, to be distinguished by the letter B—thus, B 1, B 2, B 3, and so on. This third or B series are afterwards to follow the series A in the Sub-enumerator's Compilation Book *before the close* of the entries of the same *Census Sub-division group*, and before the commencement of the first series in the *next independent Census Subdivision group*.

Travellers.

25. The Sub-enumerator is also required to fill one or more Schedules with particulars respecting any travellers or persons he may find camping out or sleeping under drays, &c., on the Census night. He should also make enquiry and furnish an estimate respecting the number, sex, &c., of any such persons he may ascertain were in any Census Sub-division of his Subdistrict on that night, but whom he did not succeed in meeting with. Such Schedules to be classed and numbered consecutively with the B series of the particular Census Sub-division.

House occupied by several families.

26. He must see whether a Householder's Schedule is a return for the whole house, or for a part of it only, and in case the house is occupied by more than one family, he must obtain returns for the other part or parts of it upon separate Schedules. When two or more Householders' Schedules are used for a house the Sub-enumerator must pin them together at the upper left-hand corner, and must take care that the description of the house, &c., is entered on the outside Schedule only, striking it out from all the others and inserting instead the words "Second Schedule," "Third Schedule," in the space for the particulars of "dwelling." In making this alteration he must be sure that he does not omit to record upon the first Schedule the full number of rooms contained in the house.

Schedule defaced or lost.

27. Whenever the Sub-enumerator is unable to obtain back any of the Schedules he deposited by reason of their being defaced or lost, he must put the requisite questions to the inmates, and insert the information on one of the spare Schedules he takes with him from the answers given. Wherever it can be done without inconvenience or much delay, he should ask to see the master or mistress of the house or head of the family, or the occupier, teacher, manager, or other person in charge of the farm, school, or other establishment, and civilly elicit information accordingly. In the case of the Householders' Schedules, the substituted form may be marked with the same number as the original one, with the addition of the word "substituted" after such number.

Refusal to supply information.

28. Should persons refuse to make written returns, or to answer such questions as the Sub-enumerator is authorised to put, he may remind them of the penalty to which they are rendering themselves liable, and point out the caution at the head of the Schedules. He may also warn persons whom he may suspect of giving false information of the penalty they are incurring by so doing. Should they still persist in refusing to supply information, or in supplying it untruly, he must report the matter to his Enumerator, in order that the requisite steps may be taken to enforce compliance with the law.

Householder absent.

29. If a house in which someone resides is found locked up, a Householder's Schedule must be placed under the door or left with a neighbour. If, on returning for the Schedules, the Sub-enumerator should again find the house empty, and the papers not be left out for him, he must call again and endeavour to meet with the occupier. Should he be unable to do so after several attempts, he should fill Schedules from information obtained from one of the neighbours or some other person acquainted with the inmates, in which case the house may be considered as properly visited. He must, however, take care that no persons are recorded in this manner who did not actually abide in the house on the Census night; a similar course is to be adopted by the Sub-enumerator in the event of his being unable to meet with the manager or other person capable of giving exact information at a farm, school, factory, &c. These Schedules are also to be marked on top with the word "substituted," and must bear the original number of the missing form.

Failure to obtain full information.

30. The Sub-enumerator must not omit to enter persons on the Householders' Schedules because he cannot obtain all the information respecting them. If, for example, he can learn no more than that a person who has since gone away, and whose name is unknown, slept in a house or camped out in a certain place on the night of the 31st March, he must fill a Schedule for such person, writing "not known" in the column where the name should be, always stating the sex, and adding such other particulars of age, &c., as can be ascertained or estimated. This Schedule must bear the number of the original form if not recovered. If the form was issued originally, the new form must be classed and numbered consecutively with the A series.

Uninhabited and unfinished houses.

31. The descriptions of all houses intended for residences, which may be uninhabited or in course of erection at the date of taking the Census, are to be entered on Householders' Schedules in the proper column, with the word "uninhabited," or "being built," as the case may be, added. Such Schedules are to be classed and numbered with the A series and signed by the Sub-enumerator. No account is to be taken of buildings, such as churches, stores, &c., in which nobody sleeps, and which are not used nor intended to be used as dwellings.

Public offices, banks, &c.

32. In the case of public offices, banks, stores, &c., in which a person or family resides in order to take care of the premises, the number of rooms occupied by such person or family is to be given only, and not the whole number in the building. Unless some one sleeps therein, shops, bathrooms, pantries, and outhouses are not to be considered as rooms.

Hands employed.

33. He will likewise be particular to see that the number and sex of persons employed by others in agricultural, pastoral, mining, and manufacturing pursuits are duly noted after the occupations of their employers, as directed in the Instructions printed on the back of the Householder's Schedule.

Public institutions,

34. The Householders' Schedules of public institutions, such as hospitals, gaols, and the like, are to be distinctly marked as such at the top. The Schedules of licensed public-houses are also to be marked at the top with the word "hotel."

Compilation of Particulars of Householders' Schedules.

Compilation of Schedules.

35. Each Sub-enumerator is also supplied with a book, called the *Sub-enumerator's Compilation Book*, in which is recorded at the close of each day's collection the various particulars indicated by the headings, and for additional guidance in this matter, a model form of compilation is given in the beginning of each book, showing the mode of grouping all the Schedules for each Sub-division separately and in the order of their consecutives numbers.

Schedules to be arranged in order of sequence.

36. Before entering the Schedules of each Census Sub-division, they must be carefully examined and arranged in the order of the sequence of their Schedule numbers. If the order of their original distribution as directed be preserved in their collection, this arrangement will be greatly facilitated. Should this examination disclose any defects or omissions, he must with all promptitude endeavour to make them good.

Schedules for each separate Census Sub-division to be securely fastened together.

37. The Schedules of each separate *Census Sub-division* being made complete, and arranged in the manner described, must now be securely fastened together at the top left-hand corner, together with the *Index-card* (D). The *Index-card* must also be filled up correctly as regards the names of the Districts, &c.

Each Census Sub-division to be kept distinct.

38. Care must be taken that the whole of the Schedules of one Census Sub-division is included and a total made before commencing the entry of the next Census Sub-division Schedules. Should unforeseen circumstances arise which require the entry of another Census Sub-division before the collection of the Schedules of the previous Sub-division have been completed, a sufficient space must be left to receive the missing Schedules, so as to enable them to be added together in their proper place.

Uninhabited Census Sub-divisions to be noted.

39. Uninhabited *Census Sub-divisions* must also be recorded in final Summary, with the word "uninhabited" written in space for details.

Summary of Census Sub-division.

40. When all the Schedules have been entered up and the totals obtained as in model form, the *totals of Census Sub-divisions* should then be summarised in the place set apart for this purpose at the end of the Compilation Book.

Final transmission of all Schedules, Books, Forms, &c., to Enumerator.

Transmission of completed Schedule, Books, &c. to Enumerator.

41. Having certified to the correctness of entries in the form provided for that purpose at the end of Sub-enumerator's Compilation Book, the securely-fastened Schedules, together with all Books, Forms, &c., must be made up into convenient parcels and delivered to the Enumerator on or before the 3rd April.*

Folding Schedules.

42. The Schedules not to be folded where possible, but are to be laid open upon one another in their proper order; if unavoidable, fold once only in the middle.

* Where exceptional circumstances make it impossible to secure the completion and delivery within this time, special arrangements for extension must be made beforehand with the Enumerator.

SUB-ENUMERATOR'S COMPILATION BOOK.

MODEL showing the mode of Entering, Grouping, and Summarising the Particulars contained in the Householders' Schedules.

APPENDIX D.

ENTERING UP TABULATION CARDS.

I. RULES TO BE OBSERVED.

1. THE cards are of two colors, white and pink. The white alone are to be used for males; the pink alone are to be used for females.

2. These cards, white and pink, are divided into two sub-groups, thus:—

Plain cards.
- *a.* White, without blue bar, alone to be used for all males who earn their own living, and who are not dependent upon relatives or upon public or private support. Examples E, A, W.
- *b.* Pink, without blue bar, alone to be used for all females who earn their own living, and who are not dependent upon relatives or upon public or private support. Examples E, A, W

Barred cards.
- *c.* White, with blue bar, alone to be used for all males who do not earn their own livelihood, or who depend upon relatives, upon the state, or upon public or private support.
  Example, male infant, son or other male relative at school; dependent male, or dependent relative, &c.; male inmates of gaols, charitable institutions, asylums, &c.
- *d.* Pink, with blue bar, alone to be used for all females who do not earn their own livelihood, or who are mainly engaged in the domestic duties of the household for which no extra remuneration is paid, or who depend upon relatives, upon the state, or upon public or private support.
  Examples, female infant—daughter, or other female relative, or dependent at school; female inmates of gaols, charitable institutions, asylums, &c.

II. (A.) *Wife, Daughter, Son, or Relative assisting Head of Family in his or her business occupation.*

This distinction can only apply to those relatives who are expressly stated as engaged as assisting the head of the family in his business, but who do not receive definite wages or salary. In such cases the information entered in "Occupier" must include the occupation of the head of the family; thus—

W.A. Innkeeper (A) indicates wife assisting innkeeper.
S.A. Agricultural farmer (A) indicates son assisting agricultural farmer.
R.A. Pastoral farm (A) relative assisting on pastoral farm.

D.D. Where a schedule contains no apparent breadwinner the mother, senior, or head of other dependants returned under domestic duties, housekeeper, &c., must not be so classed, but referred to Occupation indefinite. Pink card without blue bar; and—

If in house under £30 a year, Class (W.)

If in house over £30 a year, Class (O.)

III. *Dependants, Male and Female.*

Be careful in filling in the Occupation space to specify the condition or occupation of each dependent person; thus—

(*a*) *Pink Cards with Blue Bar.*

1. Wife (D.D.) indicates wife engaged in domestic duties.
2. Daughter (D.D.) indicates daughter engaged in domestic duties.
3. (D.S.) indicates daughter at school.
4. (D.U.) indicates daughter at university.
5. (D.R.) indicates infant, or those who have no occupation.
6. Niece, or other female relative or female dependant to be similarly classified.
7. Female visitor, if occupation not stated, to be entered as dependant; thus—Visitor (D.R.)

(*b*) *White Cards with Blue Bar.*

8. Son (D.S.) Indicates Son at School.
9. Son (D.U.) ,, ,, University.
10. Son (D.R.) Indicates Infant or those who have no occupation.
11. Nephew or other Male relative or Male dependant to be similarly classified.

IV. B. "Male Visitors" whose occupation is not defined not to be included as dependants if they are over 15 years of age. All the former must be entered upon White card without blue bar, thus: [Occup., visitor—(Indef.)]

1. Be careful to state fully the nature of the specific kind of occupation.—*e.g.*, do not write Carpenter for Ship Carpenter.

2. In all cases where indefinite terms are given—such as Clerk, Book-keeper, Accountant, Foreman, Apprentice, Labourer, Assistant Shopman, Carrier, Engine-driver, and such like—add, if possible, the nature of employer's business, thus:—

Clerk to Brewer.
Accountant to Grocer.
Foreman to Builder.
Carpenter's Apprentice.
Engine-driver, Railway.
Engine-driver in Saw Mill.
Laborer on Agricultural Farm.
Laborer on Pastoral Farm.
Assistant to Draper.
Bank Accountant.
Carrier on Road.
Carrier to Shipping Company.
Railway Carrier.

3. Where the description is defective, more definite information may sometimes be obtained by glancing at relation to head of family, or the prevailing industries carried on in the district where the person dwells.

4. Distinguish carefully Agricultural from Pastoral Farms where possible.

VI. *Education.*

5. Should the column be left blank in the case of persons who inhabit costly dwellings, look to the signature, and if it appears to be written by one who gives indication of fair education, enter all persons above 5 as R.W.

In every case enter R.W. against any head who appears to have signed the foot Schedule in his own hand writing.

VII. *Abbreviations.*

The following abbreviations may be used on Cards:—

Birth Place—	E.	for	England.
	W.	„	Wales.
	S.	„	Scotland.
	I.	„	Ireland.
	Tas.	„	Tasmania.
	Vic.	„	Victoria.
	N.S.W.	„	New South Wales.
	Q.	„	Queensland.
	S.A.	„	South Australia.
	W.A.	„	Western Australia.
	N.Z.	„	New Zealand.
	C.	„	China.
	U.S.	„	United States.

For all other places write the name of Country more fully.

Religion.—	Ch. of E.	for	Church of England.
	P. of T.	„	Presbyterian Church of Tasmania.
	P. of V.	„	Presbyterian Church of Victoria.
	R.C.	„	Roman Catholic.
	Cong.	„	Congregational.
	S.A.	„	Salvation Army.
	W.M.	„	Wesleyan Methodist.
	W.	„	Wesleyan.
	B.	„	Baptist.
	U.	„	Unitarian.
	F.C. of S.	„	Free Church of Scotland.
	O.	„	Object.
	L.D.S.	„	Latter Day Saint.
	P.M.	„	Primitive Methodist.
	Prot.	„	Protestant, no Denomination.

VIII. *Checking Cards.*

1. All Male Cards for any one sub-division must be tied up separately. A "tab card" stating the census sub-division, and the number of Males (include Breadwinners and Dependants) must be attached. The "tab card" to be initialled by the person who enters up the tickets. Prove that the number of card agrees with that on the Index Card on Schedules of the particular Division.

2. Female Cards to be similarly tied up, indicated, and proved.

3. All Cards to be carefully locked away each night in cases.

IX. *Fines.*

A fine of 20 Cards will be inflicted for—

1. Cards indistinctly written.
2. For writing particular on a Card of the wrong colour or kind.
3. For missing any person in any Schedule.
4. For entering the same person twice.
5. For omitting any of the specific categories—indicated by the abbreviations on Cards—in regard to information contained in respect of the person on Schedule.

XIX.	Shipping Population, 31st March, 1901	30
XX.	Area, Density, and Extent of Population in Electoral Districts	30
XXI.	,, ,, ,, Registration Districts	31

Part II.—Ages of the People.

I.	Numbers at, above, and under each Year of Age, 1901	37
II.	Numbers at Quinquennial and other Age Periods, 1901	38
III.	,, (Comparative Numerical), Censuses, 1870, 1881, 1891, 1901	39
IV.	,, (Centesimal) ,, ,, ,, ,, ,,	39
V.	Numerical and Centesimal Increase or Decrease at each Age Period for successive Censuses	40
VI.	Proportion of Sexes at each Age Period, 1861, 1870, 1881, 1891, and 1901	41
VII.	Number of Females to 100 Males at each Age Period, 1861, 1870, 1881, 1891, and 1901	41
VIII.	Mean Age of Population, 1881, 1891, and 1901	42
IX.	Mean Ages at Decennial Periods, 1901	42
X.	Ages at Quinquennial and other Age Periods for the Hobart Registration Districts, including Hobart City and Hobart Suburbs, 1901	43
XI.	Ages at Quinquennial and other Age Periods for the Launceston Registration District, including Launceston City and Launceston Suburbs, 1901	44
XII.	Ages at Quinquennial and other Age Periods for the Rural Registration Districts, 1901	45
XIII.	Summary by Electoral Districts at Single Age Periods 1-21, Quinquennial Periods 21 and over	46

Part III.—Conjugal Condition.

I.	Return showing Married and Single at the last Eight Censuses	57
II.	Return showing Ages and Conjugal Condition, also Proportions per 100	58
III.	Return showing Proportion per 1000 of Persons married at different Age Periods, also Proportion to Total Population of Marriageable Age	58
IV.	Return showing Number of Unmarried Persons, Males and Females, Husbands and Wives, Widowers and Widows, with Proportions per cent.	59
V.	Return showing Bachelors and Spinsters, Husbands and Wives, the Proportions per cent., and the Numbers in excess in the case of each Sex	60
VI.	Return showing Conjugal Condition of Males and Females at different Ages in each District	61
VII.	Return showing the Number, Birth-places, Religions, and Occupations of Divorced Persons	70
VIII.	Return showing the Number of Families and Number of Husbands and Wives absent	71
IX., X., XI., XII.	Returns showing respective Ages of Husbands and Wives	72

Part IV.—Birth-places.

I.	Return showing Persons born in different Countries at the last Three Censuses	83
II.	Return showing Persons born in different Countries, Census 1901	83
III.	,, ,, ,, ,, Grouped, but not specified	86
IV.	Return showing Numbers and Proportions of Persons, Males and Females, also the Number and Proportion of Adults, born in different Countries	87
V.	Return showing Birth-places of Persons, Males and Females, in Urban and Rural Districts, (Numerical)	88
VI.	Ditto, ditto, (Centesimal)	89
VII.	Return showing Birth-place and Education in respect of all Persons three years of age and over	90
VIII.	Return showing Birth-places and Conjugal Conditions	91
IX.	Return showing Birth-places of Persons, Males and Females, in the several Electoral Districts	92
X.	Return showing Number of Persons of British Parentage Naturalised or not stated, Census, 1901	98
XI.	Return showing the length of Residence in the State of all those born outside the State	99

Part V.—Education of the People.

Table		Page
I.	Return showing Proportion of all Persons specified as regards Education relative to the Total Numbers specified under the principal Age-groups at the last Five Census Periods	105
II.	Return showing Number and Proportion of all Persons under Education and Age-groups	106
III.	Return showing Number in Urban and Rural Districts at the last Two Censuses under Education and Age-groups	107
IV.	Return showing Proportion of Persons in Urban and Rural Districts at the last Two Censuses under Education and Age-groups	108
V.	Return of Persons and Education in each Electoral District (Numerical)	109
VI.	Ditto, ditto, (Centesimal)	110
VII.	Return showing for each Electoral District and for Urban and Rural Districts the Proportion of Persons who could read, &c., in the order of the highest results; the Proportion of all ages over 7 years and over 21 years; also the Number of State Schools and their Number relative to Area and Population	111
VIII.	Return showing the Education at different Ages in Electoral Districts	112
IX.	Return showing the Number and Education of Children at Ages 3-15 (Numerical and Centesimal)	134
X.	Return showing the Education of Children (3-15) in Urban and Rural Districts	135
XI.	Return showing the Education of Children (5-15) of various Religious Denominations	136
XII.	Return showing the Number of Children (3-15) receiving Instruction at School or at Home, and Proportion to the whole Population between 3 and 15 years of Age	137
XIII.	Return of the Proportion of Children (3-15) receiving Secular Instruction	138
XIV.	Return under Age-groups of the Number and Proportion of Children receiving Instruction, and the Number and Proportion of the Residue, in Urban, Rural, and Electoral Districts	138
XV.	Return of the Number of Children (3-21) stated as attending different Schools and receiving Instruction at Home	139
XVI.	Ditto, in Urban, Rural, and Electoral Districts	140
XVII.	Ditto, attending State Schools, in Urban, Rural, and Electoral Districts	141
XVIII.	Ditto, Private Schools, ditto	142
XIX.	Ditto, receiving Instruction at Home, ditto	143
XX.	Return showing the Number of Children (3-14) of whom there is no record as to receiving Instruction either at School or at Home, in Urban, Rural, and Electoral Districts	144
XXI.	Return showing the Number of Persons between the Ages of 3 and 21, stated as attending different Schools and receiving Instruction at Home, in each Electoral District	145
XXII.	Return showing the degree of Primary Instruction possessed by Children between 5 and 15 years of Age of each Religious Denomination	161
XXIII.	Return showing the Number of Persons of higher Education, giving the various Degrees	162
XXIV.	Return showing the degree of Education of Persons of all Ages, born in Tasmania, in each Electoral District	163
XXV.	,, ,, ,, ,, ,, each Age, ,, ,,	164
XXVI.	,, ,, ,, ,, ... ,, all Ages, born in the States of New South Wales, Victoria, S. Australia, Queensland, W. Australia, and Colony of New Zealand, resident in Tasmania, in each Electoral District	186
XVII.	Return showing, in each Electoral District, the Degree of Education possessed by Persons of all Ages resident in the State of Tasmania, and born in the State of Victoria	187
XXVIII.	Ditto, New South Wales	190
XXIX.	Ditto, South Australia	193
XXX.	Ditto, Queensland	196
XXXI.	Ditto, Western Australia	199
XXXII.	Ditto, Australia, State undefined	202
XXXIII.	Colony, New Zealand	205

Part VI.—Sickness and Infirmity.

I.	Showing the Number of Sick and Infirm, and Proportion per 10,000 of Living Population, at last Two Censuses, under each description of Infirmity	213
II.	Showing the Number of Persons of the Living Population under each description of Infirmity at each Quinquennial Period of Age, Census 1901 (Numerical)	214
III.	Ditto, ditto (Centesimal)	214
IV.	Ditto, ditto (Numerical), Males	215
V.	Ditto, ditto (Centesimal), Males	215
VI.	Ditto, ditto (Numerical), Females	216
VII.	Ditto, ditto (Centesimal), Females	217
VIII.	Showing the Number and Proportion in every 10,000 living under each description of Infirmity in Urban and Rural Districts	218
IX.	Showing the Number and Proportion in every 10,000 living under each description of Infirmity in respect to Breadwinners and Dependants under various Classes of Occupations	219
X.	Showing the Number of Males and Females under each description of Infirmity in each Electoral District	220
XI.	Showing at various periods of Age the Number of Males and Females under each description of Infirmity	222
XII.	Showing the Number and Occupations of Males and Females under each description of Infirmity in the State	224

Part VII.—Religions of the People.

I.	Return showing Number of Persons belonging to the Principal Religious Denominations in 1891 and 1901	239
II.	Return showing Number of Persons belonging to the Principal Religious Denominations in 1870 and 1891; also absolute and relative Increase or Decrease	239
III.	Return showing Relative Distribution of Religions in Urban and Rural Districts	240
IV.	Return showing Percentage Proportion of Persons belonging to the different Religious Denominations at Censuses 1870, 1891, and 1901	240
V.	Return showing the Analysis of Sects grouped but not specified in Tables III. and VI.	241
VI.	Return showing the Religions of the People in the various Electoral Districts	242

Table		Page
VII.	Return showing the Religion and Education under different Age-Groups	247
VIII.	Return showing the Religion and Conjugal Condition of the People, Males and Females	248
IX.	Return showing Religion and Conjugal Condition of the People (Numerical and Centesimal)	249
X.	Return showing Ages, Religions, and Education of the People	250
XI.	Return showing the Religions of the People, separately distinguishing the Chinese	252
XII.	Return showing the Religions of the Chinese in the various Electoral Districts	253
XIII.	Return showing the Religions of the Half-caste Chinese in the various Electoral Districts	254
XIV.	Return showing the Religions of the Half-caste Tasmanian Aborigines in the various Electoral Districts	254
XV.	Return showing the Religions of other Alien Races in the various Electoral Districts	255

PART VIII.—OCCUPATIONS OF THE PEOPLE, TOGETHER WITH APPENDIX RELATING TO CHINESE.

I.	Showing Occupations of all Persons, Males and Females under and over 20 years of age, divided into Breadwinners and Dependants, and in Eight Classes	261
II.	Ditto, Comparative Returns 1891 and 1901	262
III.	Showing the Numbers and Proportion per cent. of Persons, Males and Females in different Divisions, Classes, and Sub-Classes of Occupations	263
IV.	Showing the Number and Proportion of Persons, Males and Females in the different Classes, Censuses 1891 and 1901, arranged comparatively; also showing Increase or Decrease	264
V.	Showing Persons, Males and Females belonging to 27 Orders of Occupations in Divisions and Classes; also in Urban and Rural Districts (Numerical)	266
VI.	Showing Persons, Males and Females belonging to 27 Orders of Occupations in Divisions and Classes; also in Urban and Rural Districts (Centesimal)	268
VII.	Showing the Number of Persons, Males and Females belonging to 110 distinct Sub-Orders of Occupations in Classes and Orders; also in Urban and Rural Districts	270
VIII.	Showing the Numbers and Proportion per cent. of Persons living under various Age-Groups in Divisions, Classes, and principal Sub-Classes	273
IX.	Showing the Numbers and Proportion per cent. of Occupations, distinguishing Grades of Employer, Employed, &c., in Divisions, Classes, and principal Sub-Classes	274
X.	Showing the Percentage of Breadwinners and Dependants in Urban, Rural, and Electoral Districts	275
XI.	Showing the Numbers and Proportion of Persons, Males and Females belonging to the various Classes and Sub-Classes under various Grades and Age-Groups	276
XII.	Showing the Number of Persons, Males and Females belonging to various Classes and Sub-Classes of Occupation in the State, Urban Districts, Rural Districts, and several Electoral Districts; also Breadwinners and Dependants	278
XIII.	Showing the Percentage Proportion of Breadwinners in Urban, Rural, and several Electoral Districts in Classes and Sub-Classes	280
XIV.	Showing the system of Classification of the several Occupations in Classes, Sub-Classes, Orders, Sub-Orders, and Sub-Groups	281
XV.	Showing the Number of Persons, Males and Females in Hobart and Launceston in Age Periods and Grades, and in Classes and Sub-Classes	298
XVI.	Showing the Number of Persons, Males and Females in State, and in Hobart and Launceston, in Age Periods and Grades, and in Classes, Orders, and Sub-Orders	300
XVII.	Showing the Number of Males of all Ages, and whether Employers, Employed, &c., in respect of each Specific Occupation	318
XVIII.	Showing the Number of Females of all Ages, and whether Employers, Employed, &c., in respect of each Specific Occupation	344
XIX.	Showing the Number of Persons, Males and Females in classified order of Occupation, together with Sub-Groups of Occupations of Males in each Electoral District	358
XX.	Showing the Occupations of Females in each Electoral District in Sub-Groups	382
XXI.	Showing in Alphabetical arrangement the Occupations of Males and Females under Age-Groups and Grades for each Specific Occupation	394
XXII.	Showing Occupations of Male Inmates of Establishments	428
XXIII.	Showing Occupations of Female Inmates of Establishments	430

APPENDIX.

	Particulars as to Occupations and other information regarding Chinese, Half-caste Chinese, other Alien Races, and Half-caste Tasmanians	432

Total Increase in 59·48 years	—	—	—	—	122,259	55,120	67,139	243·40	—	2·09

[a] The figures for 1841, as published in *Gazette*, are full of errors which cannot now be corrected, and should therefore be used with great caution.

[b] The figures (Persons) for 1847 include 2246 military, women, and children; also 3739 male convicts on public works.

[c] " " 1851 " 953 " " " " 568 convicts, sex not distinguished.

[d] " " 1857 " 630 " " "

[e] The discrepancy in the number of brick and stone houses in 1870 and 1881 arises from a large number of residents in country districts failing to give definite descriptions.

TABLE VI.—Showing the Increase or Diminution of the Population of each Electoral District during the interval between each of the last Five Censuses and the one immediately preceding it; also the Increase or Diminution during the whole period from 1857 to 1901.

NOTE.—The boundaries and the number of Districts were much altered between the Censuses of 1861–1870, 1881–1890, and 1891-1901, and hence it is difficult to make strict comparisons between many of the Districts. Taken in the groups as bracketed, and by the larger divisions, the comparisons are approximately correct.

Population and Dwellings.

* The *Quota* represents the average number of the Population to each Representative Member for the particular year.

† Exclusive of 567 Adults unspecified as regards exact age.

‡ The reason why the Electors in this District exceed the resident Adult Males is owing to the circumstance that a large number of the former (fully 370) are residents of the adjoining or other Districts.

NOTE.—A considerable number of the Electoral Districts were greatly altered in the interval between the two Censuses, and hence strict comparison, even between Districts of the same name, cannot be accurately made.

TASMANIA.

CENSUS, 1901.

Part III.

CONJUGAL CONDITION.

Date of Enumeration, 31st March, 1901

A1946

Part III.

CONJUGAL CONDITION.

Table		Page
I.	Return showing Married and Single at the last Eight Censuses	57
II.	Return showing Ages and Conjugal Condition, also Proportions per 100	58
III.	Return showing Proportion per 1000 of Persons married at different Age Periods, also Proportion to Total Population of Marriageable Age	58
IV.	Return showing Number of Unmarried Persons, Males and Females, Husbands and Wives, Widowers and Widows, with Proportions per cent.	59
V.	Return showing Bachelors and Spinsters, Husbands and Wives, the Proportions per cent., and the Numbers in excess in the case of each Sex	60
VI.	Return showing Conjugal Condition of Males and Females at different Ages in each District	61
VII.	Return showing the Number, Birth-places, Religions, and Occupations of Divorced Persons	70
VIII.	Return showing the Number of Families and Number of Husbands and Wives absent	71
IX., X., XI., XII.	Returns showing respective Ages of Husbands and Wives	72

CENSUS OF TASMANIA, 1901.

CONJUGAL CONDITION.

Condition at successive Censuses.

TABLE I.—Married and Single at the last Eight Census Periods.

NUMBERS.

Census Periods.	Persons.		Males.		Females.	
	Married.	Single.	Married.	Single.	Married.	Single.
1847	17,603	46,576	9059	33,265	8544	13,311
1851	19,451	49,156	9680	33,447	9771	15,709

* Indicates the number who can read and write, or read, in the English language.
† " " who can read and write in their native language only.
‡ " " who can read only in their native language.
§ The percentage of native Tasmanians who can read and write is apparently lower than the average of those born elsewhere; but this is caused by the larger proportion of children included between the ages of three and seven years.

Birth-places and Conjugal Condition.

TASMANIA.

CENSUS, 1901.

PART V.

EDUCATION OF THE PEOPLE.

Date of Enumeration, 31st March, 1901.

Part V.

EDUCATION OF THE PEOPLE.

Table		Page
I.	Return showing Proportion of all Persons specified as regards Education relative to the Total Numbers specified under the principal Age-groups at the five last Census Periods	105
II.	Return showing Number and Proportion of all Persons under Education and Age-groups	106
III.	Return showing Number in Urban and Rural Districts at the two last Censuses under Education and Age-groups	107
IV.	Return showing Proportion of Persons in Urban and Rural Districts at the two last Censuses under Education and Age-groups	108
V.	Return of Persons and Education in each Electoral District (Numerical)	109
VI.	Ditto, ditto, (Centesimal)	110
VII.	Return showing for each Electoral District and for Urban and Rural Districts the Proportion of Persons who could read, &c. in the order of the highest results; the Proportion of all Ages over 7 years and over 21 years; also the Number of State Schools and their Number relative to Area and Population	111
VIII.	Return showing the Education at different Ages in Electoral Districts	112
IX.	Return showing the Number and Education of Children at Ages 3–15 (Numerical and Centesimal)	134
X.	Return showing the Education of Children (3 - 15) in Urban and Rural Districts	135
XI.	Return showing the Education of Children (5 - 15) of various religious Denominations	136
XII.	Return showing the Number of Children (3 - 15) receiving Instruction at School or at Home, and Proportion to the whole Population between 3 and 15 years of Age	137
XIII.	Return of the Proportion of Children (3 - 15) receiving Secular Instruction	138
XIV.	Return under Age-groups of the Number and Proportion of Children receiving Instruction, and the Number and Proportion of the Residue, in Urban, Rural, and Electoral Districts	138
XV.	Return of the Number of Children (3 - 21) stated as attending different Schools and receiving Instruction at Home	139
XVI.	Ditto, in Urban, Rural, and Electoral Districts	140
XVII.	Ditto, attending State Schools, in Urban, Rural, and Electoral Districts	141
XVIII.	Ditto, Private Schools, ditto	142
XIX.	Ditto, receiving Instruction at Home, ditto	143
XX.	Return showing the Number of Children (3 - 14) of whom there is no record as to receiving Instruction either at School or at Home, in Urban, Rural, and Electoral Districts	144
XXI.	Return showing the Number of Persons between the Ages of 3 and 21, stated as attending different Schools and receiving Instruction at Home, in each Electoral District	145
XXII.	Return showing the degree of Primary Instruction possessed by Children between 5 and 15 years of age of each Religious Denomination	161
XXIII.	Return showing the Number of Persons of higher Education, giving the various Degrees	162
XXIV.	Return showing the degree of Education of Persons of all Ages, born in Tasmania, in each Electoral District	163
XXV.	" " " " " each Age "	164
XXVI.	" " " " " all Ages, born in the States of New South Wales, Victoria, S. Australia, Queensland, W. Australia; and Colony of New Zealand, resident in Tasmania, in each Electoral District	186
XXVII.	Return showing, in each Electoral District, the degree of Education possessed by Persons of all Ages resident in the State of Tasmania, and born in the State of Victoria	187
XXVIII.	Ditto, New South Wales	190
XXIX.	Ditto, South Australia	193
XXX.	Ditto, Queensland	196
XXXI.	Ditto, Western Australia	199
XXXII.	Ditto, Australia, State undefined	202
XXXIII.	Colony, New Zealand	205

CENSUS OF TASMANIA, 1901.

EDUCATION OF THE PEOPLE.

Education at successive Censuses.

CENSUS, 1901.

Part VI.

SICKNESS AND INFIRMITY.

Date of Enumeration, 31st March, 1901.

Part VI.

SICKNESS AND INFIRMITY.

Table		Page
I.	Showing the Number of Sick and Infirm, and Proportion per 10,000 of Living Population, at last two Censuses under each description of Infirmity	213
II.	Showing the Number of Persons of the Living Population under each description of Infirmity at each Quinquennial Period of Age, Census 1901 (Numerical)	214
III.	Ditto, ditto (Centesimal)	214
IV.	Ditto, ditto (Numerical), Males	215
V.	Ditto, ditto (Centesimal), Males	215
VI.	Ditto, ditto (Numerical), Females	216
VII.	Ditto, ditto (Centesimal), Females	217
VIII.	Showing the Number and Proportion in every 10,000 living under each description of Infirmity in Urban and Rural Districts	218
IX.	Showing the Number and Proportion in every 10,000 living under each description of Infirmity in respect to Breadwinners and Dependents under various Classes of Occupations	219
X.	Showing the Number of Males and Females under each description of Infirmity in each Electoral District	220
XI.	Showing at various periods of Age the Number of Males and Females under each description of Infirmity	222
XII.	Showing the Number and Occupations of Males and Females under each description of Infirmity in the State	224

CENSUS OF TASMANIA, 1901.

SICKNESS AND INFIRMITY.

Sickness and Infirmity.

TABLE I.—Showing the Number of Sick and Infirm, and Proportion per 10,000 of the living Population of Persons, Males and Females, at the last two Censuses, 1891 and 1901, under each description of Infirmity.

Nature of Infirmity.	Number of Sick and Infirm.						Proportion per 10,000 living.					
	1901.			1891.			1901.			1891.		
	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.

TASMANIA.

CENSUS, 1901.

Part VIII.

OCCUPATIONS OF THE PEOPLE.

Date of Enumeration, 31st March, 1901.

14598

Part VIII.

OCCUPATIONS OF THE PEOPLE.

TOGETHER WITH APPENDIX RELATING TO CHINESE.

Table		Page
I.	Showing Occupations of all Persons, Males, and Females under and over 20 years of age, divided into Breadwinners and Dependendants, and in Eight Classes....	261
II.	Ditto, Comparative Returns 1891 and 1901	262
III.	Showing the Numbers and Proportion per cent. of Persons, Males, and Females in different Divisions, Classes, and Sub-Classes of Occupations	263
IV.	Showing the Number and Proportion of Persons, Males, and Females in the different Classes, Censuses 1891 and 1901, arranged comparatively; also showing Increase or Decrease.....	264
V.	Showing Persons, Males, and Females belonging to 27 Orders of Occupations in Divisions and Classes; also in Urban and Rural Districts (Numerical).....	266
VI.	Showing Persons, Males, and Females belonging to 27 Orders of Occupations in Divisions and Classes; also in Urban and Rural Districts (Centesimal)	268
VII.	Showing the Number of Persons, Males, and Females belonging to 110 distinct Sub-Orders of Occupations in Classes and Orders; also in Urban and Rural Districts.....	270
VIII.	Showing the Numbers and Proportion per cent. of Persons living, under various Age-Groups, in Divisions, Classes, and principal Sub-Classes	273
IX.	Showing the Numbers and Proportion per cent. of Occupations, distinguishing Grades of Employer, Employed, &c., in Divisions, Classes, and principal Sub-Classes.....	274
X.	Showing the Percentage of Breadwinners and Dependants in Urban, Rural, and Electoral Districts.....	275
XI.	Showing the Numbers and Proportion of Persons, Males, and Females belonging to the various Classes and Sub-Classes under various Grades and Age-Groups..	276
XII.	Showing the Number of Persons, Males, and Females belonging to various Classes and Sub-Classes of Occupation in the State, Urban Districts, Rural Districts, and several Electoral Districts; also Breadwinners and Dependants.....	278
XIII.	Showing the Percentage Proportion of Breadwinners in Urban, Rural, and several Electoral Districts in Classes and Sub-Classes	280
XIV.	Showing the system of Classification of the several Occupations in Classes, Sub-Classes, Orders, Sub-Orders, and Sub-Groups	281
XV.	Showing the Number of Persons, Males, and Females in Hobart and Launceston in Age Periods and Grades, and in Classes and Sub-Classes.....	298
XVI.	Showing the Number of Persons, Males, and Females in State, and in Hobart and Launceston, in Age Periods and Grades, and in Classes, Orders, and Sub-Orders	300
XVII.	Showing the Number of Males of all Ages, and whether Employers, Employed, &c., in respect of each Specific Occupation.....	318
XVIII.	Showing the Number of Females of all Ages, and whether Employers, Employed, &c., in respect of each Specific Occupation.....	344
XIX.	Showing the Number of Persons, Males, and Females in classified order of Occupation, together with Sub-Groups of Occupations of Males in each Electoral District	358
XX.	Showing the Occupations of Females in each Electoral District in Sub-Groups....	382
XXI.	Showing in Alphabetical arrangement the Occupations of Males and Females under Age-Groups and Grades for each Specific Occupation	394
XXII.	Showing Occupations of Male Inmates of Establishments	428
XXIII.	Showing Occupations of Female Inmates of Establishments	430

APPENDIX.

Particulars as to Occupations and other information regarding Chinese..... 432

CENSUS OF TASMANIA, 1901.

OCCUPATIONS OF THE PEOPLE.

Numbers and Proportions—Classes and Ages, 1901.

TABLE I.—Showing the Number of Persons, Males, and Females living in the State at all Ages and under and over 20 years of Age, of different Occupations, arranged in two great Divisions (Breadwinners and Dependants) and in eight Classes, together with the proportion per cent. of each Division and Class in relation to the Total Number living.

NUMERICAL.

* The improved classification of Occupations adopted in 1891 does not admit of strict comparison with some of the totals of Classes *Commercial* and *Industrial* respectively. Owing to the defective classification of 1881 a considerable portion of remedied this defect. In the above table the classification of 1881 has been followed as far as possible to secure a closer comparison.

† New classification (1891), as shown in other tables, embraces 2628 Persons additional, which for the purposes of this table

‡ See previous note (†).

Occupations of the People.

TABLE XIV.—Defining the Principles of the Method adopted in the Classification of Occupations, in accordance with the uniform Scheme agreed upon by the Conference of Statists held in Sydney in February and March, 1900; and showing the number of Persons, Males, and Females employed or belonging to the principal Groups of Business, Calling, or Service, or belonging to the Principal Divisions of Dependants, arranged systematically under Classes, Sub-Classes, Orders, Sub-Orders, and Sub-Groups.

CLASSIFICATION OF OCCUPATIONS, 1901.

DEFINITION OF PRINCIPAL CLASSES.

Section A.—Breadwinners.

class.

I. PROFESSIONAL.—Embracing all persons, not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the intellectual, moral, and social wants of its inhabitants.

II. DOMESTIC.—Embracing all persons engaged in the supply of board and lodging and in rendering personal services for which remuneration is usually paid.

III. COMMERCIAL.—Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

IV. TRANSPORT AND COMMUNICATION.—Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

V. INDUSTRIAL.—Embracing all persons not otherwise classed, who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding as far as possible, all who are mainly or solely engaged in the service of commercial interchange.

VI. AGRICULTURAL, PASTORAL, MINERAL, AND OTHER PRIMARY PRODUCERS.—Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

VII. INDEFINITE.—Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

Section B.—Dependants: Non-Breadwinners.

VIII. DEPENDANTS.—Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others not otherwise engaged in pursuits for which remuneration is paid; and all persons depending upon private charity, or whose support is a burthen on the public revenue.

SYSTEMATIC TABULATION OF OCCUPATIONS* UNDER CLASSES ORDERS AND SUB-ORDERS.

CLASS I.—PROFESSIONAL.

Occupations.	Classification.			Total.	Males.	Females.
	Order.	Sub-Order.	Group.			
Order 1.—Persons engaged in Government, Defence, Law, and Protection, not otherwise classed.						
Sub-order 1.—General Government.						
The Governor	1	1	1	..	..	.
Officer of Government Department (exclusive of Officers specially classified)	..	..	..	296	287	9
Others (including persons holding Ministerial or Political Office whose occupation is not stated)	..	..	3	1	1	..

* NOTE.—The main object of this table is to ascertain as closely as possible the total number of hands actually employed in each specified Business, Calling, or Industry indicated by a distinct number; and hence the totals of the latter embrace not only those persons whose calling particularly distinguishes the form of business, but also persons of all other subordinate occupations, not otherwise specified within the same Sub-order, who receive remuneration for assistance in the conduct of the particular Business or calling.

The actual number of persons belonging to each distinctive Occupation, *irrespective of the nature of the general Business or establishment in which they are employed,* may be ascertained from the Classification of Occupations, arranged according to alphabetical order in Table XXI. These alphabetical tables also serve as indices to the specific Occupations grouped under this table and all other General Classification Tables.

TABLE XIV.—Classification of Occupations—*continued.*

Occupations.	Classification. Order.	Sub-Order.	Group.	Total.	Males.	Females.
Sub-order 2.—Local Government.						
Officer of Local Body or Municipal Council	..	2	1	83	83	..
Others (including Mayors or Members of Local Bodies whose ordinary occupation is not stated)	..	..	2	..	..	..

Shirtmaker	...	...	3	16	4	12
Milliner, Staymaker, Glovemaker	...	...	4	167	3	164
Sockmaker, Knitter	...	...	5	12	2	10
Furrier, Rugmaker	...	...	6	8	4	4
Bootmaker, Shoemaker (all Branches)	...	...	7	939	856	83
Umbrella, Parasol Maker	...	...	8	5	5	...
Feather-dresser, Glove-cleaner	...	...	9	3	...	3
Others	...	...	10	1	...	1
Sub-order 3.—Fibrous Materials.						
Mat Maker	16	3	1	4	4	...
Rope, Cord Maker	..	...	2	...	...	...
Canvas, Sail-cloth Maker	...	...	3	...	...	...
Tent, Tarpaulin Maker	...	...	4	...	...	...
Bag, Sac Maker	...	...	5	2	2	...
Others	...	...	6	...	...	...
Order 17.—Persons in connection with the Manufacture or in other Processes relating to Foods, Drinks, Narcotics, and Stimulants.						
Sub-order 1.—Animal Food.						
Slaughterman, Abattoir Worker	17	1	1	22	22	...
Meat, Bacon, Ham Curer, Preserver	...	...	2	11	11	...
Fish Curer	...	...	3	1	1	...
Butter, Cheesemaker, Factory Worker	...	...	4	32	31	1
Animal Food Refrigerator	...	...	5	...	...	...
Others	...	...	6	...	...	...
Sub-order 2.—Vegetable Food.						
Miller, Maizena Manufacturer	17	2	1	142	142	...
Baker, Biscuit, Pastry Maker	...	...	2	554	522	32
Fruit Preserver, Jam Maker	...	...	3	185	141	44
Confectionery-maker	...	...	4	44	42	2
Sugar Mill Owner, Sugar Refiner	...	...	5	...	...	...
Others	...	...	6	...	...	...
Sub-order 3.—Groceries, Drinks, Narcotics, and Stimulants.						
Brewer, Bottler, and others engaged in Brewing	17	3	1	110	110	...
Maltster	...	...	2	8	8	...
Distiller and Rectifier of Spirits, Bottler	...	...	3	3	3	...
Wine Manufacturer (not grower)	...	..	4	2	1	1
Cordial Aërated Water Manufacturer (all Branches)	...	...	5	83	81	2

TABLE XIV.—Classification of Occupations—*continued.*

Occupation.	Classification. Order.	Sub-Order.	Group.	Total.	Males.	Females.
Sub-order 3.—Groceries, Drinks, &c.—*continued.*						
Coffee Roaster	...	...	6	...	...	...
Tea-mixer, Taster	...	...	7	...	...	...
Tobacco, Cigar, Cigarette Manufacturer	...	...	8	...	...	...
Ice Manufacturer	...	...	9	4	4	...
Spice Manufacturer	...	...	10	7	5	2
Condiment-maker (all Branches)	...	...	11	9	9	...
Others	...	...	12	...	...	...
Order 18.—Persons not otherwise classed, engaged in connection with Manufactures or other processes connected with Animal and Vegetable Substances.						
Sub-order 1.—Animal Matters (not otherwise classed).						
Soap, Candle Manufacturer	18	1	1	65	58	7
Tallow-melter, Boiling-down Worker	..	..	2	1	1	..
Fellmonger, Woolwasher	..	..	3	28	28	..
Tanner, Currier (all Branches)	..	..	4	111	111	..
Bone-dust, Manure Manufacturer	..	..	5	4	4	..
Others	..	..	6	..	..	..
Sub-order 2.—Working in Wood (not otherwise classed).						
Firewood-cutter, Chopper	18	2	1	259	259	..
Fencer, Hurdle Maker	..	..	2	73	73	..
Bark-mill Owner, Worker	..	..	3	6	6	..
Others	..	..	4	6	6	..
Sub-order 3.—Workers in Vegetable Produce for Fodder.						
Chaffcutter	18	3	1	29	29	..
Corn Crusher	..	..	2	..	..	..
Oil and Seed-cake Maker	..	..	3	..	..	..
Others	..	..	4	..	..	..
Sub-Order 4.—Paper Manufacture.						
Paper Manufacturer (all Branches)	18	4	1	..	..	..
Others	..	..	2	..	..	..
Order 19.—Persons engaged in the Alteration, Modification, or Manufacture, or in other Processes, relating to Metals or Mineral Matters.						
Sub-order 1.—Manufactures and Processes relating to Stone, Clay, Earthenware, Glass, and Minerals not otherwise classed.						
Monumental, Marble Mason, Stone-cutter, Dresser	19	1	1	42	42	..
Limeburner	..	..	2	16	16	..
Plaster-maker, Cement Manufacturer	..	..	3	..	..	..
Brickmaker, Tile Manufacturer	..	..	4	136	136	..
Pottery Maker	..	..	5	22	21	1
Glass Manufacturer, Worker	..	..	6	1	1	..
Crockery, Earthenware Repairer, Maker	..	..	7	1	1	..
Asphalt Maker	..	..	8	..	..	..
Asbestos Manufacturer	..	..	9	..	..	..
Others	..	..	10	..	..	..
Sub-order 2.—Workers in Jewellery, Precious Stones, and Mining.						
Goldsmith	19	2	1	24	24	..
Lapidary, Precious Stones Worker	..	..	2	..	..	..
Electro-plater, Plater	..	..	3	1	1	..
Persons engaged in Minting	..	..	4	..	..	..
Others	..	..	5	..	..	..

TABLE XIV.—Classification of Occupations—*continued.*

Occupations.	Classification.			Total.	Males.	Females
	Order.	Sub-Order.	Group.			
Sub-order 3.—Workers in various Metals (not elsewhere classed).						
Tinsmith, Smelter, Worker	19	3	1	138	138	..
Zinc, Antimony, Bismuth, Smelter, Worker	..	..	2	..	..	..
Silver, Copper, Lead, Smelter, Worker	..	..	3	681	681	..
Malleable Iron and Steel, Manufacturer, Smelter, Worker	..	..	4	3	3	..
Pig Iron Manufacturer, Smelter, Worker	..	..	5	2	2	..
Iron-founder, Moulder, Worker		..	6	118	118	..
Brass-founder, Moulder, Brazier, Worker	..	..	7	17	17	..
Galvanized Iron Worker (all Branches)	..	..	8	..	..	..
Wire and Cable Manufacturer, Worker	..	..	9	..	..	..
Blacksmith, Striker, Farrier	..	..	10	832	832	..
Locksmith	..	..	11	6	6	..
Others	..	..	12	12	12	..
Order 20.—Persons engaged in the conversion of Coal and other Substances to purposes of Heat, Light, or Forms of Energy not otherwise classed.						
Sub-order 1.—Working in Fuel, Light, and other Forms of Energy.						
Gas Manufacture and Supply Officer, Worker	20	1	1	70	70	..
Coke Manufacture, Burner	..	..	2	..	..	..
Electro-light or Energy Producer, Worker	..	..	3	36	36	..
Hydraulic-power Producer, Worker	..	..	4	..	..	..
Charcoal Burner	..	..	5	7	7	..
Kerosene Oil Manufacturer	..	..	6	..	..	..
Others	..	..	7	7	7	..
Order 21.—Persons engaged in the Construction or Repair of Buildings, Roads, Railways, Canals, Docks, Earthworks, &c., or in operations the nature of which is undefined.						
Sub-order 1.—Houses and Buildings.						
Builder, Contractor, Manager, Foreman, Clerk	21	1	1	230	229	1
Stonemason, Hodman, Labourer	..	..	2	111	111	..
Bricklayer, Hodman, Labourer	..	..	3	222	222	..
Carpenter, Labourer	..	..	4	1381	1381	..
Slater, Shingler	..	..	5	6	6	..
Plasterer, Modeller	..	..	6	116	116	..
House-painter, Paper-hanger, Glazier	..	..	7	335	334	1
Plumber, Gasfitter, Bellhanger	..	..	8	127	127	..
Others	..	..	9	49	49	..
Sub-order 2.—Roads, Railways, Earthworks, &c.						
Road, Railway, Bridge, Telegraph, Wharf Contractor	21	2	1	164	164	..
Skilled Assistant, Foreman, Inspector, Manager	..	..	2	47	47	..
Carter, Teamster	..	..	3	2	2	..
Enginedriver, Fireman	..	..	4	17	17	..
Navvy, Labourer, Platelayer	..	..	5	1090	1090	..
Stone breaker, Contractor, Road Metal	..	..	6	15	15	..
Dredge-worker, Diver	..	..	7	5	5	..
Drainer, Pavior, Asphalt Worker	..	..	8	1	1	..
Others	..	..	9	8	8	..
Order 22.—Persons engaged in the Disposal of the Dead, or of Refuse.						
Sub-order 1.—Disposal of the Dead.						
Undertaker	22	1	1	18	17	1
Cemetery Keeper, Grave Digger	..	..	2	9	9	..
Others	..	..	3	..	..	..
Sub-order 2.—Disposal of Refuse.						
Scavenger, Street Cleaner	22	2	1	35	35	..
Chimney Sweep	..	..	2	12	12	..
Sanitary Contractor, Nightman	..	..	3	13	13	..
Others	..	..	4	..	..	..

TABLE XIV.—Classification of Occupations—*continued.*

Occupations.	Classification. Order.	Sub-Order.	Group.	Total.	Males.	Females.
Order 23.—Industrial and other active Workers Imperfectly defined.						
Sub-order 1.—Imperfectly Defined.						
Mechanic, Manufacturer (so defined)	23	1	1	21	21	..
Factory, Worker, Manager (so defined)	..	..	2	21	21	..
Engineer, Enginedriver, Stoker (so defined)	..	..	3	299	299	..
Machinist, Machine Hand (so defined)	..	..	4	16	13	3
Contractor, Manager, Apprentice, Foreman (so defined)	..	..	5	199	197	2
Labourer (undefined)	..	..	6	4397	4397	..
Others	..	..	7	1	1	..
CLASS VI.—AGRICULTURAL, PASTORAL, MINERAL, AND OTHER PRIMARY PRODUCERS.						
Order 24.—Persons directly engaged in the Cultivation of Land, in Breeding and Rearing Animals, or in obtaining Raw Products from Natural Sources.						
Sub-order 1.—Agricultural Pursuits.						
Farmer and Relative Assisting	24	1	1	11,292	9720	1572
Farmers, Agricultural and Pastoral	..	..	1[a]	94	94	..
Farm Manager, Overseer	..	..	2	157	157	..
Farm Servant, Agricultural, Pastoral, and General	..	..	3	5282	5268	14
Farm Servant, Agricultural Labourer	..	..	3[a]	77	77	..
Market Gardener	..	..	4	375	347	28
Fruitgrower, Orchardist	..	..	5	858	707	151
Hop, Cotton, Tea, Coffee Grower	..	..	6	660	352	308
Tobacco Grower	..	..	7	..	..	..
Vigneron	..	..	8	..	..	..
Sugar-planter	..	..	9	3	3	..
Horticulturist,, Gardener	..	..	10	481	480	1
Agricultural Department Officer	..	..	11	16	16	..
Others	..	..	12	127	127	..
Sub-order 2.—Pastoral Pursuits.						
Grazier, Pastoralist, Stock-breeder, and Relative Assisting	24	2	1	420	395	25
Station Manager, Overseer, Clerk	..	..	2	69	69	..
Stock-rider, Drover, Shearer, Shepherd, Pastoral Labourer	..	..	3	485	484	1
Dairy Farmer, and Relative Assisting	..	..	4	782	466	316
Dairy Assistant, Milker	..	..	5	92	76	16
Poultry Farmer	..	..	6	24	19	5
Stock and Brands Department Officer	..	..	7	6	6	..
Others	..	..	8	3	3	..
Sub-order 3.—The Capture, Preservation, or Destruction of Wild Animals, or the acquisition of Products yielded by Wild Animals.						
Bee-keeper	24	3	1	5	4	1
Kangaroo-hunter, Rabbiter	..	..	2	322	320	2
Wild Fowl, Game Keeper, Hunter	..	..	3	1	1	..
Others	..	..	4	86	74	12
Sub-order 4.—Fisheries.						
Fisheries, Department Inspector, Officer	24	4	1	1	1	..
Fishermen	..	..	2	160	156	4
Oyster-bed Lessee, Worker, Shell-fish Catcher	..	..	3	..	..	..
Engaged in Whale, Seal Fishery	..	..	4	1	1	..
Others	..	..	5	..	..	..
Sub-order 5.—Forestry, or the acquisition of Raw Products yielded by Natural Vegetation.						
Forest Department Ranger, Officer	24	5	1	1	1	..
Forest Sawmill, Proprietor, Worker	..	..	2	166	165	1
Axeman, Woodman, Timber-getter, Splitter	..	..	3	353	351	2
Barkstripper	..	..	4	8	8	..

TABLE XIV.—Classification of Occupations—*continued.*

Occupations.	Classification.			Total.	Males.	Females.
	Order.	Sub-Order.	Group.			
Sub-order 5.—Forestry, &c.—*continued.*						
Collector of Pith and Fibre-yielding Plants	..	..	5	..	..	..
Others	..	..	6	..	..	..
Sub-order 6.—Engaged in the Conservation of Water in all its forms, and in Water Supply from Natural Sources.						
Conservation of Water Department Officer	24	6	1	4	4	..
Ditto Caretaker, Worker		..	2	21	21	..
Water Supply (private) Officer, Worker, Well-sinker	..	..	3	..	..	..
Water-carrier, Carter	..	..	4	..	..	..
Others	..	..	5	..	..	..
Sub-order 7.—Mines, Quarries, or the acquisition of Natural Mineral Products.						
Mines Department Officer	24	7	1	15	15	.
Mines Gold (quartz), Proprietor, Manager, Worker		..	2	661	661	..
Ditto, ditto (alluvial), ditto, ditto, ditto	..	..	3	70	70	..
Ditto, ditto (undefined), ditto, ditto, ditto		..	4	130	130	..
Ditto, Tin (lode), Miner, Worker	.	..	5	101	101	..
Ditto, ditto (alluvial), Proprietor, Manager, Worker	.	..	6	1098	1098	..
Ditto, Silver, ditto, ditto, ditto	..	..	7	1330	1330	..
Ditto, Coal, ditto, ditto, ditto	..	..	8	138	137	1
Ditto, Iron, Worker	..	..	9	4	4	..
Ditto, Copper, Manager, Officer, Miner, Worker	..	..	10	1046	1046	..
Ditto, Shale, ditto, ditto, ditto, ditto	..	..	11	..	..	..
Ditto, Precious Stones, Manager, Worker	..	..	12	..	..	..
Ditto, others and undefined, ditto ditto	.	..	13	674	674	..
Quarry Proprietor, Manager, Clerk	..	..	14	7	7	..
Quarryman, Worker	..	...	15	193	193	..
Others	..	..	16	..	..	..
CLASS VII.—INDEFINITE.						
Order 25.—Persons whose occupations are undefined or unknown, embracing those who derive incomes which cannot be directly related to any other class.						
Sub-order 1.—Persons of independent means having no specific occupation, or undefined.						
Pensioner	25	1	1	68	61	7
Annuitant	..	..	2	202	72	130
Independent means, Lady, Gentleman (so returned)	..	..	3	388	168	220
Others	..	..	4	908	225	683
CLASS VIII.—DEPENDANTS.						
Order 26.—Persons dependent upon Natural Guardians.						
Sub-order 1.—Domestic duties for which remuneration is not paid.						
Wife, Mother, Widow	26	1	1	24,091	..	24,091
Son, Daughter, Relative	..	..	2	9001	..	9001
Visitor	..	..	3	372	..	372
Boarder, Lodger	..	..	4	77	..	77
Sub-order 2.—Dependant Scholars and Students.						
Son, Daughter, Relative, and others supported at University	26	2	1	19	8	11
Son, Daughter, Relative, and others at School		..	2	30,909	15,538	15,371
Son, Daughter, Relative, and others taught at Home	..	..	3	3879	1754	2125
Sub-order 3.—Dependant Relatives and others not stated to be performing Domestic Duties.						
Father, Mother (dependent upon Children)	26	3	1	784	220	564
Son, Daughter, Relative (including persons under 20 years of age) with unspecified occupations	..	..	2	26,852	13,523	13,329
Visitor	..	..	3	1410	177	1233
Others	..	..	4	10	10	..

TABLE XIV.—Classification of Occupations—*continued.*

Occupations.	Classification.			Total.	Males.	Females.
	Order.	Sub-Order.	Group.			
Order 27.—Persons dependent upon the State, or upon Public or Private support.						
Sub-order 1.—Supported by Voluntary and State Contributions.						
Inmate of Hospital	27	1	1	175	84	91
Ditto Benevolent Institution	..	..	2	615	309	306
Ditto Hospital for Insane	..	..	3	410	221	189
Ditto Boys' Home and Industrial School	..	..	4	128	25	103
State Child	..	..	5	35	16	19
Inmate of Night Refuge	..	..	6	..	..	..
Ditto Refuge	..	..	7	52	15	37
Pauper, Beggar	..	..	8	32	14	18
Others	..	..	9	..	..	..
Sub-order 2.—Criminal Class (under legal detention).						
Inmate of Gaol, Penal Establishment	27	2	1	76	71	5
Ditto, Lock-up, Watch-house	..	..	2	1	1	..
Ditto Reformatory, Industrial School		..	3	53	53	..
Others	..	..	4	..	..	..

General Summary—

Occupation.	Classification.			Persons.						
	Order.	Sub-Order.	Group.	Persons.	Males.	Females.	Hobart.	Launceston.	Wellington.	West Devon.
CLASS V.—INDUSTRIAL.										
ORDER 15.—*Persons engaged in connection with the Manufacture, or in other Processes relating to Art and Mechanic Productions in which materials of various kinds are employed in combination.*										
Sub-Order 1.—Books and Publications.										
Publisher, Newspaper Proprietor	15	1	1	16	15	1	2	5	1	...
Printer, Printer's Manager, Clerk	15	1	2	246	235	11	85	78	...	1
Compositor	15	1	3	162	162	...	81	33	1	...
Machinist, Stereotyper, and others engaged in Printing	15	1	4	13	12	1	4	3	...	...
Bookbinder, Manufacturing Stationer (all branches)	15	1	5	73	35	38	22	7	...	...
Others	15	1	6	7	7	...	...	7	...	...
Sub-Order 2.—Musical Instruments.										
Musical Instrument Maker	15	2	1	4	4	...	3	1	...	...
Musical Instrument, Tuner, Repairer	15	2	2	11	11	...	4	4	...	...
Sub-Order 3.—Prints, Pictures, and Art Materials.										
Lithographer, Lithographic, Zincographic Printer	15	3	1	17	17	...	5	6	...	...
Picture-frame Maker, Picture Restorer, Cleaner	15	3	2	8	8	...	3	2	...	...
Sub-Order 4.—Ornaments, Minor Art Products, and Small Wares.										
Carver (all branches), Carver and Gilder	15	4	1	10	10	...	3	6	...	...
Image Maker, Modeller	15	4	2	2	2	...	...	1	...	...
Taxidermist	15	4	3	1	1	...	...	1	...	...
Basket-maker, Wicker-worker	15	4	5	24	24	...	14	6	...	...
Artificial Flower Maker, Art Needle Worker	15	4	6	7	...	7	...	...	...	...
Paper Bag, Box Maker	15	4	7	4	2	2	...	2	...	...
Brush, Broom Maker	15	4	8	30	24	6	17	7	...	...
Others	15	4	9	1	1	...	1	...	...	...
Sub-Order 6.—Designs, Medals, Type, and Dies.										
Engraver (not art), Pattern Designer	15	6	3	5	4	1	3	..	1	...
Rubber-stamp Maker	15	6	4	1	1	...	...	1	...	...
Sub-Order 7.—Watches, Clocks, and Scientific Instruments.										
Watch, Clock, Chronometer Maker	15	7	1	81	80	1	30	22	...	3
Optician	15	7	3	2	2	...	1	...	...	...
Electrical Instrument Maker	15	7	5	1	1	...	...	...	...	...
Sub-Order 9.—Arms, Ammunition, and Explosives.										
Gunsmith	15	9	1	7	7	...	2	2	...	...
Shot Maker	15	9	5	2	2	...	...	...	...	...
Sub-Order 10.—Engines, Machines, Tools, and Implements.										
Engine-maker, Fitter, Mechanical Engineer	15	10	1	291	291	...	43	57	3	5
Millwright	15	10	2	3	3	...	...	3	...	...
Boilermaker	15	10	3	44	44	...	9	24	...	...
Agricultural Machinery and Implement Maker	15	10	4	2	2	...	...	...	...	...
Sewing Machine Maker, Repairer	15	10	5	1	1	...	1	...	...	...
Cutler, Toolmaker, Saw-setter	15	10	6	2	2	...	2	...	...	...
Gas, Water Meter Maker	15	10	7	1	1	...	...	...	...	...
Others	15	10	9	2	2	...	...	...	...	...
Sub-Order 11.—Carriages and Vehicles.										
Railway Carriage, Waggon, Tramcar Builder	15	11	1	39	39	...	3	14	...	...
Coach, Carriage, Waggon, Cart Builder	15	11	2	163	163	...	43	62	4	1
Bicycle Maker	15	11	3	20	20	...	2	7	...	...
Wheelwright	15	11	5	104	104	...	14	5	6	11
Others	15	11	6	1	1	...	1	...	...	...
Sub-Order 12.—Harness, Saddlery, and Leatherware.										
Saddlery and Harness Maker, Whipmaker	15	12	1	178	177	1	28	66	6	3
Leather Cutter, Designer	15	12	3	1	1	...	...	1	...	...
Portmanteau Maker	15	12	4	2	2	...	1	1	...	...
Sub-Order 13.—Ships, Boats, and their Equipments.										
Shipbuilder, Shipwright, Boatbuilder	15	13	1	66	66	...	26	8	1	...
Ship Rigger	15	13	2	2	2	...	2	...	...	...
Sailmaker	15	13	4	17	17	...	10	3	...	...
Dock Engine-driver, Labourer	15	13	6	2	2	...	2	...	...	...
